## **Chapter 1**

# General Ledger.

General Ledger will be a fully-featured, multi-user, open-source general ledger system. The project is in the early stages of development.

2 General Ledger.

# Chapter 2

# **Data Structure Index**

### 2.1 Data Structures

Here are the data structures with brief descriptions:

ds	_list				 			 												 		
ds	_list_element				 			 												 		
ds	_map				 															 		
ds	_map_str				 			 												 		
	_record																					
_	_recordset .																					
	_report																					
	_str																					
	_vector																					
_	_pair_node .																					
pa	rams				 			 														

4 Data Structure Index

# **Chapter 3**

# File Index

### 3.1 File List

Here is a list of all documented files with brief descripti
---

lib/database/database.h
User interface to database functionality
lib/database/db_connection.h
Interface to database connection functionality
lib/database/db_currenttb.c
Implementation of current TB functionality
lib/database/db_currenttb.h
Interface to current trial balance functionality
lib/database/db_entities.c
Implementation of entities functionality
lib/database/db_entities.h
Interface to entities functionality
lib/database/db_internal.h
Internal library interface to database functionality
lib/database/db_jelines.c
Implementation of journal entries functionality
lib/database/db_jelines.h
Interface to journal entry lines functionality
lib/database/db_jes.c
Implementation of journal entries functionality
lib/database/db_jes.h
Interface to journal entries functionality
lib/database/db_jesrcs.c
Implementation of journal entry sources functionality
lib/database/db_jesrcs.h
Interface to journal entry sources functionality
lib/database/db_nomaccts.c
Implementation of nominal accounts functionality
lib/database/db_nomaccts.h
Interface to nominal accounts functionality
lib/database/db_query.h
Interface to database query functionality
lib/database/db_reporting.c
Implementation of database reporting functionality
lib/database/db_reporting.h
Interface to database reporting functionality
lib/database/db_sampledata.c
Implementation of database sample data functionality

6 File Index

lib/database/db_sampledata.h	
Interface to database sample data functionality	47
lib/database/db_sql.h	
Interface to database specific SQL strings	48
lib/database/db standingdata.c	
Implementation of standing data functionality	55
lib/database/db_standingdata.h	
Interface to journal entries functionality	56
lib/database/db_structure.c	
Implementation of database structure functionality	58
lib/database/db structure.h	00
Interface to database structure functionality	59
lib/database/db users.c	Je
	er
Implementation of users functionality	60
lib/database/db_users.h	00
Interface to users functionality	62
lib/database/dummy/db_dummy_create_entities_table_sql.c	
Returns dummy SQL query to create entities table	63
lib/database/dummy/db_dummy_create_users_table_sql.c	
Returns dummy SQL query to create users table	64
lib/database/dummy/db_dummy_drop_entities_table_sql.c	
Returns dummy SQL query to drop entities table	64
lib/database/dummy/db_dummy_drop_users_table_sql.c	
Returns dummy SQL query to drop users table	65
lib/database/dummy/db_dummy_general.c	
Implementation of dummy database functionality	66
lib/database/dummy/db_dummy_list_entities_report_sql.c	
Returns dummy SQL query to create list entities report	67
lib/database/dummy/db_dummy_list_users_report_sql.c	٠.
Returns dummy SQL query to create list users report	68
lib/database/mysql/db_mysql_all_jes_number_report_sql.c	00
Returns MYSQL SQL query to create JE by number report	69
	08
lib/database/mysql/db_mysql_all_jes_report_sql.c  Returns MYSQL SQL query to create all jes report	00
, , ,	69
lib/database/mysql/db_mysql_check_total_entity_report_sql.c	7.
Returns MYSQL SQL query to create check total report by entity	70
lib/database/mysql/db_mysql_check_total_report_sql.c	
Returns MYSQL SQL query to create check total report	71
lib/database/mysql/db_mysql_create_all_jes_view_sql.c	
Returns MYSQL SQL query to create all_jes view	71
lib/database/mysql/db_mysql_create_check_total_view_sql.c	
Returns MYSQL SQL query to create check total view	72
lib/database/mysql/db_mysql_create_current_trial_balance_view_sql.c	
Returns MYSQL SQL query to create trial balance view	72
lib/database/mysql/db_mysql_create_entities_table_sql.c	
Returns MYSQL SQL query to create entities table	73
lib/database/mysql/db_mysql_create_jelines_table_sql.c	
Returns MYSQL SQL query to create journal entry lines table	74
lib/database/mysql/db_mysql_create_jes_table_sql.c	
Returns MYSQL SQL query to create journal entries table	74
lib/database/mysql/db_mysql_create_jesrcs_table_sql.c	
Returns MYSQL SQL query to create JE sources table	75
lib/database/mysql/db_mysql_create_nomaccts_table_sql.c	/ (
Returns MYSQL SQL query to create nominal accounts table	75
	75
lib/database/mysql/db_mysql_create_standingdata_table_sql.c	70
Returns MYSQL SQL query to create standing data table	76
lib/database/mysql/db_mysql_create_users_table_sql.c	<b>-</b> -
Returns MYSQL SQL query to create users table	77

3.1 File List 7

lib/database/mysql/db_mysql_current_trial_balance_entity_report_sql.c	
Returns MYSQL SQL query to create current TB by entity report	77
lib/database/mysql/db_mysql_current_trial_balance_report_sql.c	
Returns MYSQL SQL query to create current TB report	78
lib/database/mysql/db_mysql_drop_all_jes_view_sql.c	
Returns MYSQL SQL query to drop all JES view	78
lib/database/mysql/db_mysql_drop_check_total_view_sql.c	
Returns MYSQL SQL query to drop check total view	79
lib/database/mysql/db_mysql_drop_current_trial_balance_view_sql.c	00
Returns MYSQL SQL query to drop trial balance view	80
lib/database/mysql/db_mysql_drop_entities_table_sql.c  Returns MYSQL SQL guery to drop entities table	90
	80
lib/database/mysql/db_mysql_drop_jelines_table_sql.c  Returns MYSQL SQL query to drop journal entry lines table	81
lib/database/mysql/db_mysql_drop_jes_table_sql.c	01
Returns MYSQL SQL query to drop entities table	81
lib/database/mysql/db_mysql_drop_jesrcs_table_sql.c	01
Returns MYSQL SQL query to drop JE sources table	82
lib/database/mysql/db_mysql_drop_nomaccts_table_sql.c	02
Returns MYSQL SQL query to drop nominal accounts table	83
lib/database/mysql/db_mysql_drop_standingdata_table_sql.c	-
Returns MYSQL SQL query to drop standing data table	83
lib/database/mysql/db_mysql_drop_users_table_sql.c	
Returns MYSQL SQL query to drop users table	84
lib/database/mysql/db_mysql_general.c	
Implementation of MYSQL database functionality	84
lib/database/mysql/db_mysql_list_entities_report_sql.c	
Returns MYSQL SQL query to create list entities report	86
lib/database/mysql/db_mysql_list_jelines_report_sql.c	
Returns MYSQL SQL query to create JE lines report	87
lib/database/mysql/db_mysql_list_jes_report_sql.c	
Returns MYSQL SQL query to create journal entries report	87
lib/database/mysql/db_mysql_list_jesrcs_report_sql.c	
Returns MYSQL SQL query to create JE sources report	88
lib/database/mysql/db_mysql_list_nomaccts_report_sql.c	
Returns MYSQL SQL query to create list nominal accounts report	89
lib/database/mysql/db_mysql_list_users_report_sql.c	
Returns MYSQL SQL query to create list users report	89
lib/database/mysql/db_mysql_show_standingdata_report_sql.c	
Returns MYSQL SQL query to create show standing data report	90
lib/datastruct/data_structures.h	
Interface to data structures	91
lib/datastruct/ds_fieldtypes.h	
Record field types enumeration	91
lib/datastruct/ds_list.c	
Implementation of generic doubly-linked list data structure	92
lib/datastruct/ds_list.h	07
Interface to generic doubly-linked list data structure	97
lib/datastruct/ds_map.c	101
Implementation of string-string hash map data structure	101
lib/datastruct/ds_map.h	100
Interface to string-string hash map data structure	103
lib/datastruct/ds_map_str.c	100
Implementation of string-string hash map data structure	106
Interface to string-string hash map data structure	108
lib/datastruct/ds record.c	100
	110
imponditution of rootid database structure	

8 File Index

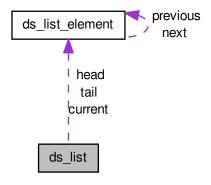

lib/datastruct/ds_record.h	
Interface to record data structure	114
lib/datastruct/ds_recordset.c	
Implementation of query result set structure	118
lib/datastruct/ds_recordset.h	
Interface to record set structure	122
lib/datastruct/ds_report.c	
Implementation of generic report data structure	127
lib/datastruct/ds_report.h	100
Interface to generic report data structure	129
Implementation of string data structure	131
lib/datastruct/ds_str.h	
Interface to string data structure	141
lib/datastruct/ds vector.c	
Implementation of generic doubly-linked vector data structure	151
lib/datastruct/ds_vector.h	
Interface to generic doubly-linked vector data structure	154
lib/file_ops/config_file_read.c	
Implementation of configuration file reading functionality	158
lib/file_ops/config_file_read.h	400
Interface to configuration file reading functionality	160
lib/file_ops/delim_file_read.c  Implementation of delimited file reading functionality	163
lib/file_ops/delim_file_read.h	103
Interface to delimited file reading functionality	165
lib/file_ops/file_ops.h	
User interface to file operations functionality	166
lib/gl_general/gl_config.c	
Implementation of configuration functionality	167
lib/gl_general/gl_config.h	
Interface to configuration functionality	169
lib/gl_general/gl_errors.c	
Implementation of error functionality	171
lib/gl_general/gl_errors.h  Interface to error functionality	172
lib/gl_general/gl_general.h	172
<del></del>	172
lib/gl_general/gl_logging.c	
Implementation of logging functionality	173
lib/gl_general/gl_logging.h	
Interface to logging functionality	175
lib/gl_general/gl_login.c	
Implementation of login functionality	176
lib/gl_general/gl_login.h	
Interface to login functionality	177
progs/gl_db/gl_db_config.c Implementation of GL DB program configuration functionality	178
progs/gl db/gl db config.h	170
Interface to GL DB program configuration functionality	180
progs/gl_db/gl_db_main.c	
Main function for GL database program	182
progs/gl_reports/gl_reports_config.c	
Implementation of GL reports program configuration functionality	183
progs/gl_reports/gl_reports_config.h	
Interface to GL reports program configuration functionality	185

## **Chapter 4**

## **Data Structure Documentation**

#### 4.1 ds\_list Struct Reference

Collaboration diagram for ds\_list:

#### **Data Fields**

- size\_t length
- · bool free\_on\_delete
- struct ds\_list\_element \* head
- struct ds\_list\_element \* tail
- struct ds\_list\_element \* current
- void(\* data\_destructor )(void \*)

#### 4.1.1 Detailed Description

List data structure

#### 4.1.2 Field Documentation

4.1.2.1 struct ds\_list\_element\* ds\_list::current

Pointer to current element

4.1.2.2 void(\* ds\_list::data\_destructor)(void \*)

Data destructor function

4.1.2.3 bool ds\_list::free\_on\_delete

'Free on delete' flag

4.1.2.4 struct ds\_list\_element\* ds\_list::head

Pointer to head element

4.1.2.5 size\_t ds\_list::length

Length of list

4.1.2.6 struct ds\_list\_element\* ds\_list::tail

Pointer to tail element

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_list.c

#### 4.2 ds\_list\_element Struct Reference

Collaboration diagram for ds\_list\_element:

#### **Data Fields**

- void \* data
- struct ds\_list\_element \* previous
- struct ds\_list\_element \* next

#### 4.2.1 Detailed Description

List element data structure

#### 4.2.2 Field Documentation

4.2.2.1 void\* ds\_list\_element::data

Pointer to data

4.2.2.2 struct ds\_list\_element\* ds\_list\_element::next

Pointer to next element

4.2.2.3 struct ds\_list\_element\* ds\_list\_element::previous

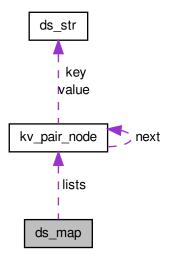

Pointer to previous element

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_list.c

### 4.3 ds\_map Struct Reference

Collaboration diagram for ds\_map:

#### **Data Fields**

- struct kv\_pair\_node \*\* lists
- size\_t hash\_size

### 4.3.1 Detailed Description

Structure to hold a hash map

#### 4.3.2 Field Documentation

4.3.2.1 size\_t ds\_map::hash\_size

Size of array of lists

4.3.2.2 struct kv\_pair\_node\*\* ds\_map::lists

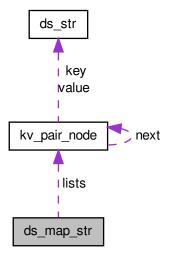

Pointer to array of lists

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_map.c

### 4.4 ds\_map\_str Struct Reference

Collaboration diagram for ds\_map\_str:

#### **Data Fields**

- struct kv\_pair\_node \*\* lists
- size\_t hash\_size

#### 4.4.1 Detailed Description

Structure to hold a hash map

#### 4.4.2 Field Documentation

4.4.2.1 size\_t ds\_map\_str::hash\_size

Size of array of lists

4.4.2.2 struct kv\_pair\_node\*\* ds\_map\_str::lists

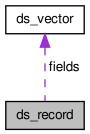

Pointer to array of lists

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_map\_str.c

# 4.5 ds\_record Struct Reference

Collaboration diagram for ds\_record:

# **Data Fields**

• struct ds\_vector \* fields

# 4.5.1 Detailed Description

Vector data structure

#### 4.5.2 Field Documentation

4.5.2.1 struct ds\_vector\* ds\_record::fields

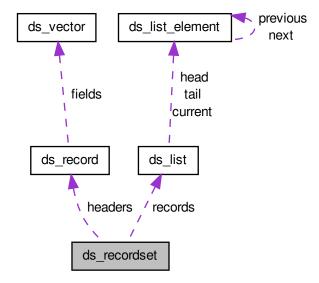

Vector of fields

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_record.c

# 4.6 ds\_recordset Struct Reference

Collaboration diagram for ds\_recordset:

## **Data Fields**

- size\_t num\_fields
- size\_t \* field\_lengths
- ds\_record headers
- ds list records
- enum ds\_field\_types \* types

# 4.6.1 Detailed Description

Result set structure

# 4.6.2 Field Documentation

4.6.2.1 size\_t\* ds\_recordset::field\_lengths

Lengths of the longest fields

4.6.2.2 ds\_record ds\_recordset::headers

A list of field headers

4.6.2.3 size\_t ds\_recordset::num\_fields

The number of fields in a record

4.6.2.4 ds\_list ds\_recordset::records

A list of records

4.6.2.5 enum ds\_field\_types\* ds\_recordset::types

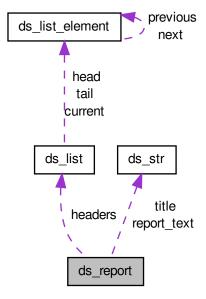

Types of records

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_recordset.c

# 4.7 ds\_report Struct Reference

Collaboration diagram for ds\_report:

# **Data Fields**

- ds\_str title
- ds\_list headers
- ds\_str report\_text
- time\_t created\_time

# 4.7.1 Detailed Description

Structure to contain a report

## 4.7.2 Field Documentation

4.7.2.1 time\_t ds\_report::created\_time

The created time of the report

4.7.2.2 ds\_list ds\_report::headers

The report headers

4.7.2.3 ds\_str ds\_report::report\_text

The report text

4.7.2.4 ds\_str ds\_report::title

The report title

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_report.c

# 4.8 ds\_str Struct Reference

# **Data Fields**

- char \* data
- size\_t length
- size\_t capacity

# 4.8.1 Detailed Description

Structure to contain string

# 4.8.2 Field Documentation

4.8.2.1 size\_t ds\_str::capacity

The size of the data buffer

4.8.2.2 char\* ds\_str::data

The data in C-style string format

4.8.2.3 size\_t ds\_str::length

The length of the string

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_str.c

# 4.9 ds\_vector Struct Reference

#### **Data Fields**

- size\_t size
- size\_t current
- bool free\_on\_delete
- void \*\* data
- void(\* data\_destructor )(void \*)

# 4.9.1 Detailed Description

Vector data structure

#### 4.9.2 Field Documentation

4.9.2.1 size\_t ds\_vector::current

Current position

4.9.2.2 void\*\* ds\_vector::data

Data array

4.9.2.3 void(\* ds\_vector::data\_destructor)(void \*)

Data destructor function

4.9.2.4 bool ds\_vector::free\_on\_delete

'Free on delete' flag

4.9.2.5 size\_t ds\_vector::size

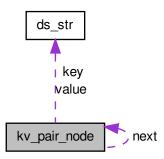

Size of vector

The documentation for this struct was generated from the following file:

• lib/datastruct/ds\_vector.c

# 4.10 kv\_pair\_node Struct Reference

Collaboration diagram for kv\_pair\_node:

## **Data Fields**

- char \* key
- char \* value
- struct kv\_pair\_node \* next
- ds\_str key
- ds\_str value

# 4.10.1 Detailed Description

Structure to hold a key-value pair node

# 4.10.2 Field Documentation

4.10.2.1 ds\_str kv\_pair\_node::key

A pointer to the key

4.10.2.2 char\* kv\_pair\_node::key

A pointer to the key

4.10.2.3 struct kv\_pair\_node \* kv\_pair\_node::next

A pointer to the next node

4.10.2.4 ds\_str kv\_pair\_node::value

A pointer to the value

4.10.2.5 char\* kv\_pair\_node::value

A pointer to the value

The documentation for this struct was generated from the following files:

- lib/datastruct/ds\_map.c
- lib/datastruct/ds\_map\_str.c

# 4.11 params Struct Reference

#include <gl\_config.h>

Collaboration diagram for params:

# **Data Fields**

- ds\_str hostname
- ds str database
- ds\_str username
- ds\_str password

# 4.11.1 Detailed Description

Structure to hold database login parameters

# 4.11.2 Field Documentation

4.11.2.1 ds\_str params::database

Database name

4.11.2.2 ds\_str params::hostname

Database hostname

4.11.2.3 ds\_str params::password

Password for database access

4.11.2.4 ds\_str params::username

Username for database access

The documentation for this struct was generated from the following file:

• lib/gl\_general/gl\_config.h

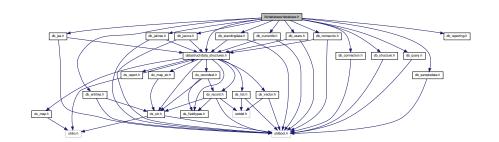

# **Chapter 5**

# **File Documentation**

# 5.1 lib/database/database.h File Reference

User interface to database functionality.

```
#include "datastruct/data_structures.h"
#include "db_connection.h"
#include "db_structure.h"
#include "db_query.h"
#include "db_sampledata.h"
#include "db_reporting.h"
#include "db_users.h"
#include "db_entities.h"
#include "db_nomaccts.h"
#include "db_jes.h"
#include "db_jes.h"
#include "db_jelines.h"
#include "db_jesrcs.h"
#include "db_standingdata.h"
#include dependency graph for database.h:
```

This graph shows which files directly or indirectly include this file:

# 5.1.1 Detailed Description

User interface to database functionality.

**Author** 

Paul Griffiths

## Copyright

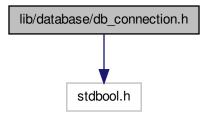

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.2 lib/database/db\_connection.h File Reference

Interface to database connection functionality.

#include <stdbool.h>

Include dependency graph for db\_connection.h:

This graph shows which files directly or indirectly include this file:

## **Functions**

- bool db\_connect (const char \*host, const char \*database, const char \*username, const char \*password)

  Connects to a database.
- void db\_close (void)

Disconnects from a database.

# 5.2.1 Detailed Description

Interface to database connection functionality. Function implementations are provided by the individual database components.

Author

Paul Griffiths

## Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

## 5.2.2 Function Documentation

5.2.2.1 bool db\_connect ( const char \* host, const char \* database, const char \* username, const char \* password )

Connects to a database.

#### **Parameters**

host	The hostname.
database	The database name.
username	The username with which to connect.
password	The password for the specified user.

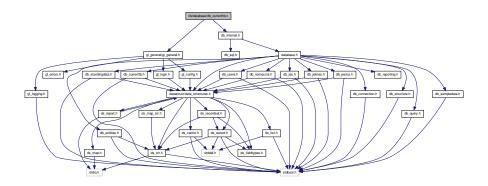

#### Returns

true if the connection was successfully made, false otherwise.

# 5.3 lib/database/db\_currenttb.c File Reference

Implementation of current TB functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
Include dependency graph for db_currenttb.c:
```

# **Functions**

bool db\_create\_current\_trial\_balance\_view (void)

Creates the current TB view in the database.

bool db\_drop\_current\_trial\_balance\_view (void)

Drops the current TB view from the database.

ds\_str db\_current\_trial\_balance\_report (ds\_str entity)

Runs the current trial balance report.

• bool db\_create\_check\_total\_view (void)

Creates the check total view in the database.

bool db\_drop\_check\_total\_view (void)

Drops the check total view from the database.

• ds\_str db\_check\_total\_report (ds\_str entity)

Runs the check total report.

### 5.3.1 Detailed Description

Implementation of current TB functionality.

Author

Paul Griffiths

## Copyright

#### 5.3.2 Function Documentation

5.3.2.1 ds str db\_check\_total\_report ( ds str entity )

Runs the check total report.

Returns

The report.

5.3.2.2 bool db\_create\_check\_total\_view ( void )

Creates the check total view in the database.

**Returns** 

true on success, false on failure.

5.3.2.3 bool db\_create\_current\_trial\_balance\_view ( void )

Creates the current TB view in the database.

**Returns** 

true on success, false on failure.

5.3.2.4 ds\_str db\_current\_trial\_balance\_report ( ds\_str entity )

Runs the current trial balance report.

Returns

The report.

5.3.2.5 bool db\_drop\_check\_total\_view ( void )

Drops the check total view from the database.

**Returns** 

true on success, false on failure.

5.3.2.6 bool db\_drop\_current\_trial\_balance\_view ( void )

Drops the current TB view from the database.

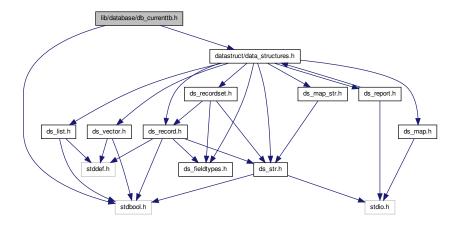

Returns

true on success, false on failure.

# 5.4 lib/database/db\_currenttb.h File Reference

Interface to current trial balance functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_currenttb.h:
```

This graph shows which files directly or indirectly include this file:

# **Functions**

- bool db\_create\_current\_trial\_balance\_view (void)

  Creates the current TB view in the database.
- bool db\_drop\_current\_trial\_balance\_view (void)

Drops the current TB view from the database.

ds\_str db\_current\_trial\_balance\_report (ds\_str entity)

Runs the current trial balance report.

• bool db\_create\_check\_total\_view (void)

Creates the check total view in the database.

bool db\_drop\_check\_total\_view (void)

Drops the check total view from the database.

ds\_str db\_check\_total\_report (ds\_str entity)

Runs the check total report.

# 5.4.1 Detailed Description

Interface to current trial balance functionality.

#### 5.4.2 Function Documentation

5.4.2.1 ds\_str db\_check\_total\_report ( ds\_str entity )

Runs the check total report.

Returns

The report.

5.4.2.2 bool db\_create\_check\_total\_view ( void )

Creates the check total view in the database.

Returns

true on success, false on failure.

5.4.2.3 bool db\_create\_current\_trial\_balance\_view ( void )

Creates the current TB view in the database.

Returns

true on success, false on failure.

5.4.2.4 ds\_str db\_current\_trial\_balance\_report ( ds\_str entity )

Runs the current trial balance report.

Returns

The report.

5.4.2.5 bool db\_drop\_check\_total\_view ( void )

Drops the check total view from the database.

Returns

true on success, false on failure.

5.4.2.6 bool db\_drop\_current\_trial\_balance\_view ( void )

Drops the current TB view from the database.

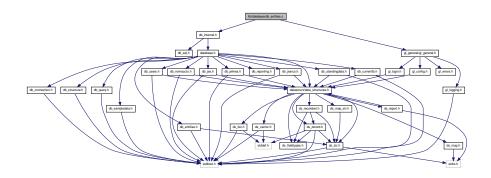

Returns

true on success, false on failure.

# 5.5 lib/database/db\_entities.c File Reference

Implementation of entities functionality.

```
#include "db_internal.h"
#include "gl_general/gl_general.h"
Include dependency graph for db_entities.c:
```

## **Functions**

• bool db\_create\_entities\_table (void)

Creates the entities table in the database.

bool db\_drop\_entities\_table (void)

Drops the entities table in the database.

• ds\_str db\_list\_entities\_report (void)

Creates a report listing all entities.

# 5.5.1 Detailed Description

Implementation of entities functionality.

Author

Paul Griffiths

```

## 5.5.2 Function Documentation

```
5.5.2.1 bool db_create_entities_table ( void )
```

Creates the entities table in the database.

#### Returns

true on success, false on failure.

5.5.2.2 bool db\_drop\_entities\_table ( void )

Drops the entities table in the database.

# Returns

true on success, false on failure.

5.5.2.3 ds\_str db\_list\_entities\_report ( void )

Creates a report listing all entities.

#### Returns

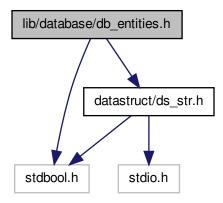

A ds\_str containing the report.

# 5.6 lib/database/db\_entities.h File Reference

# Interface to entities functionality.

```
#include <stdbool.h>
#include "datastruct/ds_str.h"
```

Include dependency graph for db\_entities.h:

This graph shows which files directly or indirectly include this file:

# **Functions**

- bool db\_create\_entities\_table (void)
  - Creates the entities table in the database.
- bool db\_drop\_entities\_table (void)

Drops the entities table in the database.

ds\_str db\_list\_entities\_report (void)

Creates a report listing all entities.

# 5.6.1 Detailed Description

Interface to entities functionality.

Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

## 5.6.2 Function Documentation

5.6.2.1 bool db\_create\_entities\_table ( void )

Creates the entities table in the database.

#### **Returns**

true on success, false on failure.

5.6.2.2 bool db\_drop\_entities\_table ( void )

Drops the entities table in the database.

#### Returns

true on success, false on failure.

5.6.2.3 ds\_str db\_list\_entities\_report ( void )

Creates a report listing all entities.

#### Returns

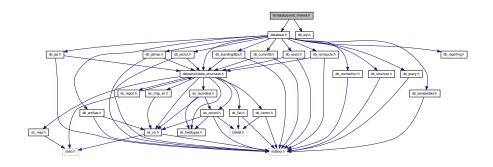

A ds\_str containing the report.

# 5.7 lib/database/db\_internal.h File Reference

Internal library interface to database functionality.

```
#include "database.h"
#include "db_sql.h"
```

Include dependency graph for db\_internal.h:

This graph shows which files directly or indirectly include this file:

## 5.7.1 Detailed Description

Internal library interface to database functionality. The library interface includes the individual SQL functions which should be encapsulated from the user.

**Author** 

Paul Griffiths

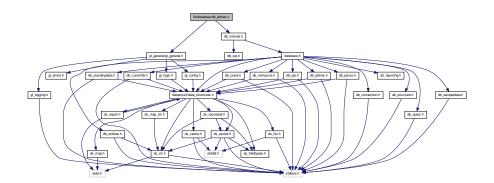

## Copyright

#### 5.9.2 Function Documentation

5.9.2.1 bool db\_create\_jelines\_table ( void )

Creates the journal entry lines table in the database.

Returns

true on success, false on failure.

5.9.2.2 bool db\_drop\_jelines\_table ( void )

Drops the journal entry lines table from the database.

**Returns** 

true on success, false on failure.

5.9.2.3 ds\_str db\_list\_jelines\_report ( void )

Creates a report listing all journal entry lines..

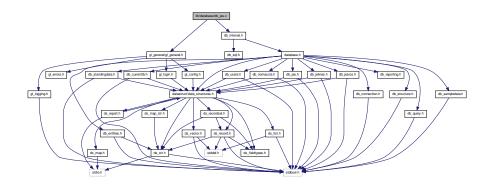

Returns

A ds\_str containing the report.

# 5.10 lib/database/db\_jes.c File Reference

Implementation of journal entries functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
Include dependency graph for db_jes.c:
```

#### **Functions**

bool db\_create\_jes\_table (void)

Creates the journal entries table in the database.

bool db\_drop\_jes\_table (void)

Drops the jes table from the database.

ds\_str db\_list\_jes\_report (void)

Creates a report listing all journal entries.

• bool db\_create\_all\_jes\_view (void)

Creates the all JEs view in the database.

bool db\_drop\_all\_jes\_view (void)

Drops the all JEs view from the database.

ds\_str db\_all\_jes\_report (ds\_str je\_num)

Creates a report showing all journal entries.

# 5.10.1 Detailed Description

Implementation of journal entries functionality.

Author

Paul Griffiths

# Copyright

# 5.10.2 Function Documentation

5.10.2.1 ds\_str db\_all\_jes\_report ( ds\_str je\_num )

Creates a report showing all journal entries.

#### **Parameters**

*je\_num* The journal entry number to show, or NULL to show all journal entries.

#### Returns

```
A ds_str containing the report.
```

```
5.10.2.2 bool db_create_all_jes_view ( void )
```

Creates the all JEs view in the database.

#### Returns

true on success, false on failure.

```
5.10.2.3 bool db_create_jes_table ( void )
```

Creates the journal entries table in the database.

## Returns

true on success, false on failure.

```
5.10.2.4 bool db_drop_all_jes_view ( void )
```

Drops the all JEs view from the database.

### Returns

true on success, false on failure.

```
5.10.2.5 bool db_drop_jes_table ( void )
```

Drops the jes table from the database.

## Returns

true on success, false on failure.

```
5.10.2.6 ds_str db_list_jes_report ( void )
```

Creates a report listing all journal entries.

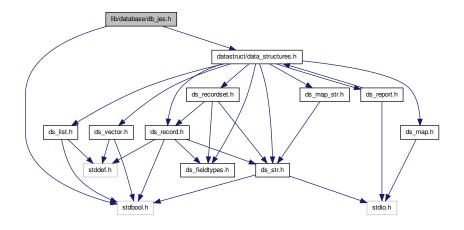

# Returns

A ds\_str containing the report.

# 5.11 lib/database/db\_jes.h File Reference

Interface to journal entries functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_jes.h:
```

This graph shows which files directly or indirectly include this file:

## **Functions**

• bool db\_create\_jes\_table (void)

Creates the journal entries table in the database.

bool db\_drop\_jes\_table (void)

Drops the jes table from the database.

• ds\_str db\_list\_jes\_report (void)

Creates a report listing all journal entries.

bool db\_create\_all\_jes\_view (void)

Creates the all JEs view in the database.

bool db\_drop\_all\_jes\_view (void)

Drops the all JEs view from the database.

ds\_str db\_all\_jes\_report (ds\_str je\_num)

Creates a report showing all journal entries.

# 5.11.1 Detailed Description

Interface to journal entries functionality.

## 5.11.2 Function Documentation

```
5.11.2.1 ds_str db_all_jes_report ( ds_str je_num )
```

Creates a report showing all journal entries.

#### **Parameters**

je\_num | The journal entry number to show, or NULL to show all journal entries.

#### Returns

A ds\_str containing the report.

```
5.11.2.2 bool db_create_all_jes_view ( void )
```

Creates the all JEs view in the database.

#### Returns

true on success, false on failure.

```
5.11.2.3 bool db_create_jes_table ( void )
```

Creates the journal entries table in the database.

#### Returns

true on success, false on failure.

5.11.2.4 bool db\_drop\_all\_jes\_view ( void )

Drops the all JEs view from the database.

# Returns

true on success, false on failure.

5.11.2.5 bool db\_drop\_jes\_table ( void )

Drops the jes table from the database.

#### Returns

true on success, false on failure.

```
5.11.2.6 ds_str db_list_jes_report ( void )
```

Creates a report listing all journal entries.

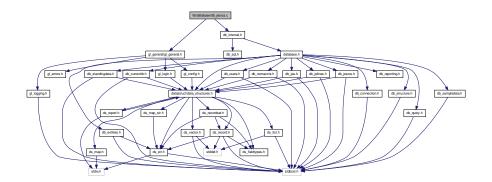

#### Returns

A ds\_str containing the report.

# 5.12 lib/database/db\_jesrcs.c File Reference

Implementation of journal entry sources functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
Include dependency graph for db_jesrcs.c:
```

#### **Functions**

· bool db create jesrcs table (void)

Creates the JE sources table in the database.

bool db\_drop\_jesrcs\_table (void)

Drops the jesrcs table from the database.

• ds\_str db\_list\_jesrcs\_report (void)

Creates a report listing all journal entry sources.

## 5.12.1 Detailed Description

Implementation of journal entry sources functionality.

# 5.21 lib/database/db\_sql.h File Reference

Interface to database specific SQL strings.

This graph shows which files directly or indirectly include this file:

#### **Functions**

```
    const char * db create users table sql (void)
```

Returns the SQL query to create the users table.

const char \* db drop users table sql (void)

Returns the SQL query to drop the users table.

const char \* db\_list\_users\_report\_sql (void)

Returns the SQL query to run the "list users" report.

const char \* db create entities table sql (void)

Returns the SQL query to create the entities table.

const char \* db\_drop\_entities\_table\_sql (void)

Returns the SQL query to drop the entities table.

const char \* db\_list\_entities\_report\_sql (void)

Returns the SQL query to run the "list entities" report.

const char \* db\_create\_jes\_table\_sql (void)

Returns the SQL query to create the journal entries table.

const char \* db\_drop\_jes\_table\_sql (void)

Returns the SQL query to drop the journal entries table.

const char \* db\_list\_jes\_report\_sql (void)

Returns the SQL query to run the "list journal entries" report.

const char \* db\_create\_nomaccts\_table\_sql (void)

Returns the SQL query to create the nominal accounts table.

const char \* db\_drop\_nomaccts\_table\_sql (void)

Returns the SQL query to drop the nominal accounts table.

const char \* db list nomaccts report sql (void)

Returns the SQL query to run the "list nominal accounts" report.

const char \* db create jelines table sql (void)

Returns the SQL query to create the JE lines table.

const char \* db\_drop\_jelines\_table\_sql (void)

Returns the SQL query to drop the JE lines table.

const char \* db\_list\_jelines\_report\_sql (void)

Returns the SQL query to run the "list JE lines" report.

const char \* db\_current\_trial\_balance\_report\_sql (void)

Returns the SQL query to run the "current TB" report.

const char \* db\_current\_trial\_balance\_entity\_report\_sql (void)

Returns the SQL query to run the "current TB" by entity. report.

• const char \* db\_create\_jesrcs\_table\_sql (void)

Returns the SQL query to create the JE sources table.

const char \* db\_drop\_jesrcs\_table\_sql (void)

Returns the SQL query to drop the JE sources table.

const char \* db\_list\_jesrcs\_report\_sql (void)

Returns the SQL query to run the "list JE sources" report.

const char \* db\_create\_standingdata\_table\_sql (void)

Returns the SQL query to create the standing data table.

const char \* db drop standingdata table sql (void)

Returns the SQL query to drop the standing data table.

const char \* db\_show\_standingdata\_report\_sql (void)

Returns the SQL query to run the "show standing data" report.

const char \* db create current trial balance view sql (void)

Returns the SQL query to create the current TB view.

const char \* db\_drop\_current\_trial\_balance\_view\_sql (void)

Returns the SQL query to drop the current TB view.

const char \* db\_create\_check\_total\_view\_sql (void)

Returns the SQL query to create the check total view.

const char \* db\_drop\_check\_total\_view\_sql (void)

Returns the SQL query to drop the check total view.

const char \* db\_check\_total\_report\_sql (void)

Returns the SQL query to run the "check total" report.

const char \* db check total entity report sql (void)

Returns the SQL query to run the "check total" by entity. report.

const char \* db\_create\_all\_jes\_view\_sql (void)

Returns the SQL query to create the all JEs view.

const char \* db\_drop\_all\_jes\_view\_sql (void)

Returns the SQL query to drop the all JEs view.

const char \* db\_all\_jes\_report\_sql (void)

Returns the SQL query to run the "all JEs" report.

const char \* db\_all\_jes\_number\_report\_sql (void)

Returns the SQL query to run the "JE by number" report.

# 5.21.1 Detailed Description

Interface to database specific SQL strings. Function implementations are provided by the individual database components.

## 5.21.2 Function Documentation

5.21.2.1 const char\* db\_all\_jes\_number\_report\_sql ( void )

Returns the SQL query to run the "JE by number" report.

Returns

The SQL query.

5.21.2.2 const char\* db\_all\_jes\_report\_sql ( void )

Returns the SQL query to run the "all JEs" report.

Returns

```
5.21.2.3 const char* db_check_total_entity_report_sql ( void )
Returns the SQL query to run the "check total" by entity. report.
Returns
    The SQL query.
5.21.2.4 const char* db_check_total_report_sql ( void )
Returns the SQL query to run the "check total" report.
Returns
    The SQL query.
5.21.2.5 const char* db_create_all_jes_view_sql ( void )
Returns the SQL query to create the all JEs view.
Returns
    The SQL query.
5.21.2.6 const char* db_create_check_total_view_sql ( void )
Returns the SQL query to create the check total view.
Returns
    The SQL query.
5.21.2.7 const char* db_create_current_trial_balance_view_sql ( void )
Returns the SQL query to create the current TB view.
Returns
    The SQL query.
5.21.2.8 const char* db_create_entities_table_sql ( void )
Returns the SQL query to create the entities table.
Returns
    The SQL query.
5.21.2.9 const char* db_create_jelines_table_sql ( void )
Returns the SQL query to create the JE lines table.
Returns
    The SQL query.
```

```
5.21.2.10 const char* db_create_jes_table_sql ( void )
Returns the SQL query to create the journal entries table.
Returns
    The SQL query.
5.21.2.11 const char* db_create_jesrcs_table_sql ( void )
Returns the SQL query to create the JE sources table.
Returns
    The SQL query.
5.21.2.12 const char* db_create_nomaccts_table_sql ( void )
Returns the SQL query to create the nominal accounts table.
Returns
    The SQL query.
5.21.2.13 const char* db_create_standingdata_table_sql ( void )
Returns the SQL query to create the standing data table.
Returns
    The SQL query.
5.21.2.14 const char* db_create_users_table_sql ( void )
Returns the SQL query to create the users table.
Returns
    The SQL query.
5.21.2.15 const char* db_current_trial_balance_entity_report_sql ( void )
Returns the SQL query to run the "current TB" by entity. report.
Returns
    The SQL query.
5.21.2.16 const char* db_current_trial_balance_report_sql (void)
Returns the SQL query to run the "current TB" report.
Returns
    The SQL query.
```

```
5.21.2.17 const char* db_drop_all_jes_view_sql ( void )
Returns the SQL query to drop the all JEs view.
Returns
    The SQL query.
5.21.2.18 const char* db_drop_check_total_view_sql ( void )
Returns the SQL query to drop the check total view.
Returns
    The SQL query.
5.21.2.19 const char* db_drop_current_trial_balance_view_sql ( void )
Returns the SQL query to drop the current TB view.
Returns
    The SQL query.
5.21.2.20 const char* db_drop_entities_table_sql ( void )
Returns the SQL query to drop the entities table.
Returns
    The SQL query.
5.21.2.21 const char* db_drop_jelines_table_sql ( void )
Returns the SQL query to drop the JE lines table.
Returns
    The SQL query.
5.21.2.22 const char* db_drop_jes_table_sql ( void )
Returns the SQL query to drop the journal entries table.
Returns
    The SQL query.
5.21.2.23 const char* db_drop_jesrcs_table_sql ( void )
Returns the SQL query to drop the JE sources table.
Returns
    The SQL query.
```

```
5.21.2.24 const char* db_drop_nomaccts_table_sql ( void )
Returns the SQL query to drop the nominal accounts table.
Returns
    The SQL query.
5.21.2.25 const char* db_drop_standingdata_table_sql ( void )
Returns the SQL query to drop the standing data table.
Returns
    The SQL query.
5.21.2.26 const char* db_drop_users_table_sql ( void )
Returns the SQL query to drop the users table.
Returns
    The SQL query.
5.21.2.27 const char* db_list_entities_report_sql ( void )
Returns the SQL query to run the "list entities" report.
Returns
    The SQL query.
5.21.2.28 const char* db_list_jelines_report_sql ( void )
Returns the SQL query to run the "list JE lines" report.
Returns
    The SQL query.
5.21.2.29 const char* db_list_jes_report_sql ( void )
Returns the SQL query to run the "list journal entries" report.
Returns
    The SQL query.
5.21.2.30 const char* db_list_jesrcs_report_sql ( void )
Returns the SQL query to run the "list JE sources" report.
Returns
    The SQL query.
```

5.21.2.31 const char\* db\_list\_nomaccts\_report\_sql ( void )

Returns the SQL query to run the "list nominal accounts" report.

**Returns** 

The SQL query.

5.21.2.32 const char\* db\_list\_users\_report\_sql ( void )

Returns the SQL query to run the "list users" report.

**Returns** 

The SQL query.

5.21.2.33 const char\* db\_show\_standingdata\_report\_sql ( void )

Returns the SQL query to run the "show standing data" report.

Returns

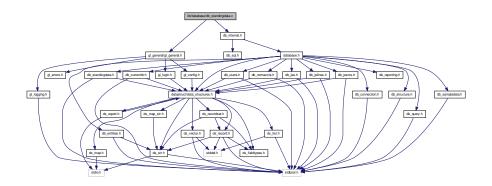

The SQL query.

# 5.22 lib/database/db\_standingdata.c File Reference

Implementation of standing data functionality.

#include "gl\_general/gl\_general.h"
#include "db\_internal.h"

Include dependency graph for db\_standingdata.c:

# **Functions**

• bool db\_create\_standingdata\_table (void)

Creates the standing data table in the database.

bool db\_drop\_standingdata\_table (void)

Drops the standingdata table from the database.

• ds str db show standingdata report (void)

Creates a report showing standing data.

# 5.22.1 Detailed Description

Implementation of standing data functionality.

```

#### 5.22.2 Function Documentation

```
5.22.2.1 bool db_create_standingdata_table ( void )
```

Creates the standing data table in the database.

#### **Returns**

```
true on success, false on failure.
```

```
5.22.2.2 bool db_drop_standingdata_table ( void )
```

Drops the standingdata table from the database.

#### Returns

```
true on success, false on failure.
```

```
5.22.2.3 ds_str db_show_standingdata_report ( void )
```

Creates a report showing standing data.

#### Returns

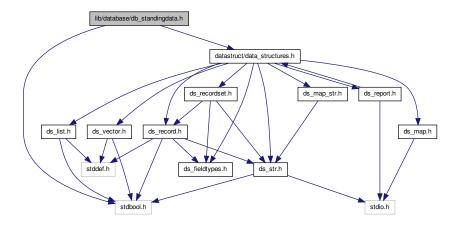

A ds\_str containing the report.

# 5.23 lib/database/db\_standingdata.h File Reference

Interface to journal entries functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
```

Include dependency graph for db\_standingdata.h:

This graph shows which files directly or indirectly include this file:

## **Functions**

- bool db\_create\_standingdata\_table (void)
  - Creates the standing data table in the database.
- bool db\_drop\_standingdata\_table (void)

Drops the standingdata table from the database.

ds\_str db\_show\_standingdata\_report (void)

Creates a report showing standing data.

#### 5.23.1 Detailed Description

Interface to journal entries functionality.

# 5.23.2 Function Documentation

5.23.2.1 bool db\_create\_standingdata\_table ( void )

Creates the standing data table in the database.

#### Returns

true on success, false on failure.

5.23.2.2 bool db\_drop\_standingdata\_table ( void )

Drops the standingdata table from the database.

#### **Returns**

true on success, false on failure.

5.23.2.3 ds\_str db\_show\_standingdata\_report ( void )

Creates a report showing standing data.

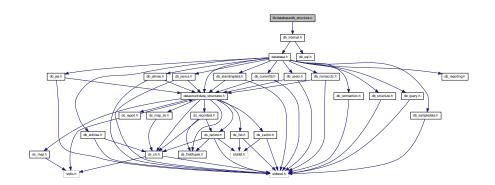

Returns

A ds\_str containing the report.

# 5.24 lib/database/db\_structure.c File Reference

Implementation of database structure functionality.

#include "db\_internal.h"
Include dependency graph for db\_structure.c:

#### **Functions**

bool db\_create\_database\_structure (void)

Creates an empty database structure.

bool db\_delete\_database\_structure (void)

Deletes the database structure.

# 5.24.1 Detailed Description

Implementation of database structure functionality.

#### 5.27.2 Function Documentation

5.27.2.1 bool db\_create\_users\_table ( void )

Creates the users table in the database.

Returns

true on success, false on failure.

5.27.2.2 bool db\_drop\_users\_table ( void )

Drops the users table from the database.

Returns

true on success, false on failure.

5.27.2.3 ds\_str db\_list\_users\_report ( void )

Creates a report listing all users.

Returns

A ds\_str containing the report.

# 5.28 lib/database/dummy/db\_dummy\_create\_entities\_table\_sql.c File Reference

Returns dummy SQL query to create entities table.

## **Functions**

const char \* db\_create\_entities\_table\_sql (void)
 Returns the SQL query to create the entities table.

#### 5.28.1 Detailed Description

Returns dummy SQL query to create entities table.

**Author** 

Paul Griffiths

## Copyright

#### 5.28.2 Function Documentation

5.28.2.1 const char\* db\_create\_entities\_table\_sql ( void )

Returns the SQL query to create the entities table.

Returns

The SQL query.

# 5.29 lib/database/dummy/db\_dummy\_create\_users\_table\_sql.c File Reference

Returns dummy SQL query to create users table.

#### **Functions**

const char \* db\_create\_users\_table\_sql (void)
 Returns the SQL query to create the users table.

#### 5.29.1 Detailed Description

Returns dummy SQL query to create users table.

**Author** 

Paul Griffiths

## Copyright

# 5.31.2 Function Documentation

5.31.2.1 const char\* db\_drop\_users\_table\_sql ( void )

Returns the SQL query to drop the users table.

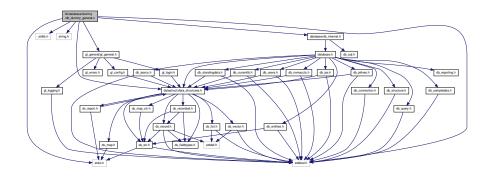

Returns

#### 5.32 lib/database/dummy/db\_dummy\_general.c File Reference

Implementation of dummy database functionality.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <stdbool.h>
#include "gl_general/gl_general.h"
#include "database/db_internal.h"
#include "datastruct/data_structures.h"
```

Include dependency graph for db\_dummy\_general.c:

#### **Macros**

• #define XOPEN SOURCE 600

#### **Functions**

- bool db\_connect (const char \*host, const char \*database, const char \*username, const char \*password) Connects to a database.
- void db close (void)

Disconnects from a database.

bool db\_execute\_query (ds\_str query)

Executes an SQL query on the database.

ds\_recordset db\_create\_recordset\_from\_query (ds\_str query)

Creates a ds\_recordset from a query.

## **Detailed Description**

Implementation of dummy database functionality. This module is useful when compiling for testing purpose on a system without any of the supported database development libraries available.

#### **Author**

Paul Griffiths

#### Copyright

#### 5.32.2 Macro Definition Documentation

5.32.2.1 #define \_XOPEN\_SOURCE 600

UNIX feature test macro

#### 5.32.3 Function Documentation

5.32.3.1 bool db\_connect ( const char \* host, const char \* database, const char \* username, const char \* password )

Connects to a database.

#### **Parameters**

host	The hostname.
database	The database name.
username	The username with which to connect.
password	The password for the specified user.

#### Returns

true if the connection was successfully made, false otherwise.

5.32.3.2 ds\_recordset db\_create\_recordset\_from\_query ( ds\_str query )

Creates a ds\_recordset from a query.

#### **Parameters**

query   The SELECT query to run.
----------------------------------

## Returns

A ds\_recordset containing the query result, or  $\mathtt{NULL}$  on failure.

5.32.3.3 bool db\_execute\_query ( ds\_str query )

Executes an SQL query on the database.

## **Parameters**

query	The query to execute.
-------	-----------------------

#### Returns

true if the query was successfully executed, false otherwise.

# 5.33 lib/database/dummy/db\_dummy\_list\_entities\_report\_sql.c File Reference

Returns dummy SQL query to create list entities report.

#### **Functions**

const char \* db\_list\_entities\_report\_sql (void)
 Returns the SQL query to run the "list entities" report.

#### 5.33.1 Detailed Description

Returns dummy SQL query to create list entities report.

**Author** 

Paul Griffiths

#### Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

#### 5.33.2 Function Documentation

```
5.33.2.1 const char* db_list_entities_report_sql ( void )
```

Returns the SQL query to run the "list entities" report.

Returns

The SQL query.

# 5.34 lib/database/dummy/db\_dummy\_list\_users\_report\_sql.c File Reference

Returns dummy SQL query to create list users report.

#### **Functions**

const char \* db\_list\_users\_report\_sql (void)
 Returns the SQL query to run the "list users" report.

#### 5.34.1 Detailed Description

Returns dummy SQL query to create list users report.

**Author** 

Paul Griffiths

#### Copyright

# 5.34.2 Function Documentation

5.34.2.1 const char\* db\_list\_users\_report\_sql ( void )

Returns the SQL query to run the "list users" report.

Returns

The SQL query.

# 5.35 lib/database/mysql/db\_mysql\_all\_jes\_number\_report\_sql.c File Reference

Returns MYSQL SQL query to create JE by number report.

#### **Functions**

const char \* db\_all\_jes\_number\_report\_sql (void)
 Returns the SQL query to run the "JE by number" report.

#### 5.35.1 Detailed Description

Returns MYSQL SQL query to create JE by number report.

Returns the SQL query to drop the users table.

Returns

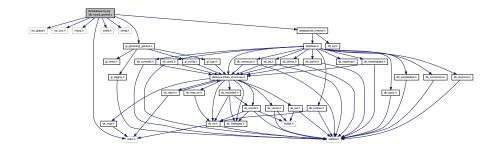

The SQL query.

# 5.61 lib/database/mysql/db\_mysql\_general.c File Reference

Implementation of MYSQL database functionality.

```
#include <my_global.h>
#include <my_sys.h>
#include <mysql.h>
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "gl_general/gl_general.h"
#include "database/db_internal.h"
```

Include dependency graph for db\_mysql\_general.c:

### **Functions**

- bool db\_connect (const char \*host, const char \*database, const char \*username, const char \*password)
   Connects to a database.
- void db\_close (void)

Disconnects from a database.

• bool db\_execute\_query (ds\_str query)

Executes an SQL query on the database.

ds\_recordset db\_create\_recordset\_from\_query (ds\_str query)

Creates a ds\_recordset from a query.

## **Variables**

- MYSQL \* main mss = NULL
- MYSQL \* conn\_mss = NULL

# 5.61.1 Detailed Description

Implementation of MYSQL database functionality.

### 5.61.2 Function Documentation

5.61.2.1 bool db\_connect ( const char \* host, const char \* database, const char \* username, const char \* password )

Connects to a database.

### **Parameters**

host	The hostname.
database	The database name.
username	The username with which to connect.
password	The password for the specified user.

#### Returns

true if the connection was successfully made, false otherwise.

5.61.2.2 ds\_recordset db\_create\_recordset\_from\_query ( ds\_str query )

Creates a ds\_recordset from a query.

#### **Parameters**

query	The SELECT	query to	run.
-------	------------	----------	------

### Returns

A ds\_recordset containing the query result, or  $\mathtt{NULL}$  on failure.

5.61.2.3 bool db\_execute\_query ( ds\_str query )

Executes an SQL query on the database.

### **Parameters**

query	The query to execute.
-------	-----------------------

### Returns

true if the query was successfully executed, false otherwise.

# 5.61.3 Variable Documentation

5.61.3.1 MYSQL\* conn\_mss = NULL

MYSQL connection object.

5.61.3.2 MYSQL\* main\_mss = NULL

MYSQL initialization object.

# 5.62 lib/database/mysql/db\_mysql\_list\_entities\_report\_sql.c File Reference

Returns MYSQL SQL query to create list entities report.

## **Functions**

const char \* db\_list\_entities\_report\_sql (void)
 Returns the SQL query to run the "list entities" report.

# 5.62.1 Detailed Description

Returns MYSQL SQL query to create list entities report.

```

Include dependency graph for ds\_list.c:

## **Data Structures**

- · struct ds list element
- · struct ds list

## **Functions**

ds\_list ds\_list\_create (const bool free\_on\_delete, void(\*destructor)(void \*))

Creates a new list.

void ds\_list\_destroy (ds\_list list)

Destroys a list and frees any associated resources.

void ds\_list\_destructor (void \*list)

A list destructor function.

ds\_list ds\_list\_append (ds\_list list, void \*data)

Appends an element to a list.

• void ds\_list\_remove\_tail (ds\_list list)

Removes the last element of a list.

void ds\_list\_remove\_all (ds\_list list)

Removes all the elements from a list.

void \* ds\_list\_element (ds\_list list, const size\_t index)

Retrieves the data at a specified index.

• size\_t ds\_list\_length (ds\_list list)

Returns the number of elements in a list.

bool ds\_list\_is\_empty (ds\_list list)

Checks if a list is empty.

· void ds\_list\_seek\_start (ds\_list list)

Sets the current element to the first element of a list.

void ds\_list\_seek\_end (ds\_list list)

Sets the current element to the last element of a list.

void \* ds\_list\_get\_next\_data (ds\_list list)

Returns the next element of the list.

void \* ds\_list\_get\_prev\_data (ds\_list list)

Returns the previous element of the list.

# 5.71.1 Detailed Description

Implementation of generic doubly-linked list data structure.

### 5.71.2 Function Documentation

5.71.2.1 ds\_list ds\_list\_append ( ds\_list list, void \* element )

Appends an element to a list.

### **Parameters**

list	The list to which to append.
element	The element to append.

### Returns

The same list, or NULL on failure.

5.71.2.2 ds\_list ds\_list\_create ( const bool free\_on\_delete, void(\*)(void \*) destructor )

Creates a new list.

### **Parameters**

free_on_delete	Set to true if the list elements should be destroyed when removed from the list, and when the list itself is destroyed. If set to false, the caller is responsible for destroying the elements
	prior to destroying the list.
destructor	Pointer to a destructor function to use for destroying the list elements, when free_on
	delete is true. If this is set to NULL, free() from the standard C library will be used to
	destroy the elements.

### Returns

A newly created list, or  $\mathtt{NULL}$  on failure.

5.71.2.3 void ds\_list\_destroy ( ds\_list list )

Destroys a list and frees any associated resources.

## **Parameters**

list	The list to destroy.

5.71.2.4 void ds\_list\_destructor ( void \* list )

A list destructor function.

This function may be passed to  $ds_list_create()$  when creating a list of lists. It calls  $ds_list_-destroy()$ , but the parameter of  $ds_list_destroy()$  is not compatible with the function signature expected by  $ds_list_create()$ , so this function provides an appropriate interface.

### **Parameters**

list	The list to destroy.

5.71.2.5 void\* ds list element ( ds list list, const size\_t index )

Retrieves the data at a specified index.

### **Parameters**

list	The list from which to retrieve.
index	The index of the desired element.

### **Returns**

A pointer to the data, or NULL if the index is out of range.

5.71.2.6 void\* ds\_list\_get\_next\_data ( ds\_list list )

Returns the next element of the list.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

### **Parameters**

list	The list.

## Returns

A pointer to the next element, or NULL if the end of the list has been reached.

5.71.2.7 void\* ds\_list\_get\_prev\_data ( ds\_list list )

Returns the previous element of the list.

This function returns the data of the "current element", and decrements the current element pointer. Subsequent calls to this function will return successively earlier elements.

### **Parameters**

list	The list.

### Returns

A pointer to the previous element, or NULL if the start of the list has been reached.

5.71.2.8 bool ds\_list\_is\_empty ( ds\_list list )

Checks if a list is empty.

## **Parameters**

list The list to check.	
-------------------------	--

## Returns

true is the list is empty, false otherwise.

5.71.2.9 size\_t ds\_list\_length ( ds\_list list )

Returns the number of elements in a list.

### **Parameters**

list	The list.

### Returns

The number of elements in the list.

5.71.2.10 void ds\_list\_remove\_all ( ds\_list list )

Removes all the elements from a list.

## **Parameters**

	list The list from which to remove.
--	-------------------------------------

5.71.2.11 void ds\_list\_remove\_tail ( ds\_list list )

Removes the last element of a list.

# **Parameters**

list	The list from which to remove.

5.71.2.12 void ds\_list\_seek\_end ( ds\_list list )

Sets the current element to the last element of a list.

# **Parameters**

list	The list.	

5.71.2.13 void ds\_list\_seek\_start ( ds\_list list )

Sets the current element to the first element of a list.

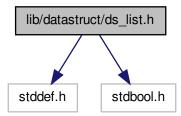

### **Parameters**

list	The list.

# 5.72 lib/datastruct/ds\_list.h File Reference

Interface to generic doubly-linked list data structure.

```
#include <stddef.h>
#include <stdbool.h>
Include dependency graph for ds_list.h:
```

This graph shows which files directly or indirectly include this file:

# **Typedefs**

• typedef struct ds\_list \* ds\_list

## **Functions**

- ds\_list ds\_list\_create (const bool free\_on\_delete, void(\*destructor)(void \*))
  - Creates a new list.
- void ds\_list\_destroy (ds\_list list)

Destroys a list and frees any associated resources.

void ds\_list\_destructor (void \*list)

A list destructor function.

• ds\_list ds\_list\_append (ds\_list list, void \*element)

Appends an element to a list.

• void ds\_list\_remove\_tail (ds\_list list)

Removes the last element of a list.

void ds\_list\_remove\_all (ds\_list list)

Removes all the elements from a list.

void \* ds\_list\_element (ds\_list list, const size\_t index)

Retrieves the data at a specified index.

• size\_t ds\_list\_length (ds\_list list)

Returns the number of elements in a list.

• bool ds\_list\_is\_empty (ds\_list list)

Checks if a list is empty.

• void ds\_list\_seek\_start (ds\_list list)

Sets the current element to the first element of a list.

void ds\_list\_seek\_end (ds\_list list)

Sets the current element to the last element of a list.

void \* ds\_list\_get\_next\_data (ds\_list list)

Returns the next element of the list.

void \* ds\_list\_get\_prev\_data (ds\_list list)

Returns the previous element of the list.

## 5.72.2 Typedef Documentation

5.72.2.1 typedef struct ds\_list\* ds\_list

Typedef for opaque list datatype

## 5.72.3 Function Documentation

5.72.3.1 ds\_list ds\_list\_append ( ds\_list list, void \* element )

Appends an element to a list.

### **Parameters**

list	The list to which to append.
element	The element to append.

# Returns

The same list, or  $\mathtt{NULL}$  on failure.

5.72.3.2 ds\_list ds\_list\_create ( const bool free\_on\_delete, void(\*)(void \*) destructor )

Creates a new list.

#### **Parameters**

free_on_delete	Set to true if the list elements should be destroyed when removed from the list, and when
	the list itself is destroyed. If set to false, the caller is responsible for destroying the elements
	prior to destroying the list.
destructor	Pointer to a destructor function to use for destroying the list elements, when free_on
	delete is true. If this is set to NULL, free() from the standard C library will be used to
	destroy the elements.

### **Returns**

A newly created list, or  $\mathtt{NULL}$  on failure.

5.72.3.3 void ds\_list\_destroy ( ds\_list list )

Destroys a list and frees any associated resources.

#### **Parameters**

lis	t The list to destroy.

5.72.3.4 void ds\_list\_destructor ( void \* list )

A list destructor function.

This function may be passed to  $ds_list_create()$  when creating a list of lists. It calls  $ds_list_-destroy()$ , but the parameter of  $ds_list_destroy()$  is not compatible with the function signature expected by  $ds_list_create()$ , so this function provides an appropriate interface.

## **Parameters**

list	The list to destroy.

5.72.3.5 void\* ds\_list\_element ( ds\_list list, const size\_t index )

Retrieves the data at a specified index.

## **Parameters**

list	The list from which to retrieve.
index	The index of the desired element.

## Returns

A pointer to the data, or NULL if the index is out of range.

5.72.3.6 void\* ds\_list\_get\_next\_data ( ds\_list list )

Returns the next element of the list.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

### **Parameters**

list	The list.

## Returns

A pointer to the next element, or NULL if the end of the list has been reached.

5.72.3.7 void\* ds\_list\_get\_prev\_data ( ds\_list list )

Returns the previous element of the list.

This function returns the data of the "current element", and decrements the current element pointer. Subsequent calls to this function will return successively earlier elements.

### **Parameters**

list	The list.
------	-----------

### **Returns**

A pointer to the previous element, or NULL if the start of the list has been reached.

5.72.3.8 bool ds\_list\_is\_empty ( ds\_list list )

Checks if a list is empty.

## **Parameters**

list	t The list to check.	
------	----------------------	--

### **Returns**

true is the list is empty, false otherwise.

5.72.3.9 size\_t ds\_list\_length ( ds\_list list )

Returns the number of elements in a list.

### **Parameters**

list	The list.

## Returns

The number of elements in the list.

5.72.3.10 void ds\_list\_remove\_all ( ds\_list list )

Removes all the elements from a list.

## **Parameters**

list The list from which to remove.	_
-------------------------------------	---

### 5.72.3.11 void ds\_list\_remove\_tail ( ds\_list list )

Removes the last element of a list.

## **Parameters**

list	The list from which to remove.

## 5.72.3.12 void ds\_list\_seek\_end ( ds\_list list )

Sets the current element to the last element of a list.

### **Parameters**

list	The list.
------	-----------

## 5.72.3.13 void ds\_list\_seek\_start ( ds\_list list )

Sets the current element to the first element of a list.

### **Parameters**

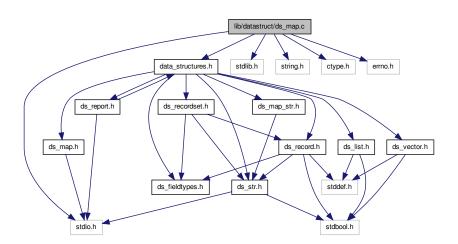

list	The list.
------	-----------

# 5.73 lib/datastruct/ds\_map.c File Reference

Implementation of string-string hash map data structure.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <ctype.h>
#include <errno.h>
#include "data_structures.h"
```

Include dependency graph for ds\_map.c:

### **Data Structures**

- struct kv pair node
- struct ds\_map

## **Macros**

• #define \_POSIX\_C\_SOURCE 200809L

Enables POSIX library functions.

## **Functions**

ds\_map ds\_map\_init (const size\_t hash\_size)

Initializes a hash map.

void ds\_map\_destroy (ds\_map map)

Destroys a hash map.

const char \* ds\_map\_get\_value (ds\_map map, const char \*key)

Retrieves a value associated with a key in the map.

void ds\_map\_insert (ds\_map map, const char \*key, const char \*value)

Inserts a key-value pair into a map.

void ds\_map\_print\_all (ds\_map map, FILE \*outfile)

Prints all the key-value pairs in a map to stdout.

# 5.73.1 Detailed Description

Implementation of string-string hash map data structure.

### 5.73.2 Function Documentation

5.73.2.1 void ds\_map\_destroy ( ds\_map map )

Destroys a hash map.

### **Parameters**

map A reference to the map to destroy.

5.73.2.2 const char\* ds\_map\_get\_value ( ds\_map map, const char\* key )

Retrieves a value associated with a key in the map.

### **Parameters**

тар	A reference to the hash map.
key	The key.

### **Returns**

A pointer to the value associated with the key, or  $\mathtt{NULL}$  if the key is not in the map. The caller should not modify the string to which this pointer points.

5.73.2.3 ds\_map ds\_map\_init ( const size\_t hash\_size )

Initializes a hash map.

### **Parameters**

hash_size	The number of possible hash values.

### Returns

A reference to the newly-created hash map.

5.73.2.4 void ds\_map\_insert ( ds\_map map, const char \* key, const char \* value )

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

### **Parameters**

тар	A reference to the hash map.
key	The key.
value	The value.

5.73.2.5 void ds\_map\_print\_all ( ds\_map map, FILE \* outfile )

Prints all the key-value pairs in a map to stdout.

### **Parameters**

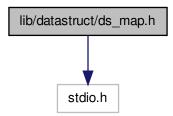

тар	A reference to the map.
outfile	A FILE pointer to which to print the output.

# 5.74 lib/datastruct/ds\_map.h File Reference

Interface to string-string hash map data structure.

# 5.74.2 Typedef Documentation

5.74.2.1 typedef struct ds\_map\* ds\_map

Opaque data type for hash map

### 5.74.3 Function Documentation

5.74.3.1 void ds\_map\_destroy ( ds\_map map )

Destroys a hash map.

### **Parameters**

map A re	ference to the map to destroy.

5.74.3.2 const char\* ds\_map\_get\_value ( ds\_map map, const char\* key )

Retrieves a value associated with a key in the map.

### **Parameters**

тар	A reference to the hash map.
key	The key.

### Returns

A pointer to the value associated with the key, or  $\mathtt{NULL}$  if the key is not in the map. The caller should not modify the string to which this pointer points.

5.74.3.3 ds\_map ds\_map\_init ( const size\_t hash\_size )

Initializes a hash map.

## **Parameters**

hash_size The number of possible hash values.	
---	--

### **Returns**

A reference to the newly-created hash map.

5.74.3.4 void ds\_map\_insert ( ds\_map map, const char \* key, const char \* value )

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

### **Parameters**

тар	A reference to the hash map.
key	The key.
value	The value.

5.74.3.5 void ds\_map\_print\_all ( ds\_map map, FILE \* outfile )

Prints all the key-value pairs in a map to stdout.

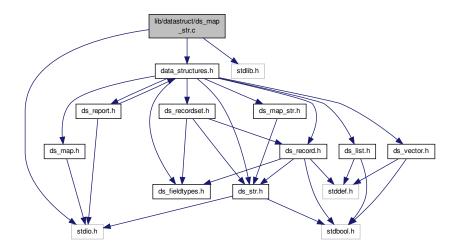

### **Parameters**

тар	A reference to the map.
outfile	A FILE pointer to which to print the output.

# 5.75 lib/datastruct/ds\_map\_str.c File Reference

### 5.75.2 Function Documentation

5.75.2.1 void ds\_map\_str\_destroy ( ds\_map\_str map )

Destroys a hash map.

### **Parameters**

map	A reference to the map to destroy.

5.75.2.2 ds\_str ds\_map\_str\_get\_value ( ds\_map\_str map, ds\_str key )

Retrieves a value associated with a key in the map.

## **Parameters**

тар	A reference to the hash map.
key	The key.

### **Returns**

A pointer to the value associated with the key, or  $\mathtt{NULL}$  if the key is not in the map. The caller should not modify the string to which this pointer points.

5.75.2.3 ds\_map\_str ds\_map\_str\_init ( const size\_t hash\_size )

Initializes a hash map.

### **Parameters**

hash_size	The number of possible hash values.

## Returns

A reference to the newly-created hash map.

5.75.2.4 void ds\_map\_str\_insert ( ds\_map\_str map, ds\_str key, ds\_str value )

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

### **Parameters**

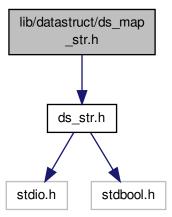

тар	A reference to the hash map.
key	The key.
value	The value.

Opaque data type for hash map

## 5.76.3 Function Documentation

5.76.3.1 void ds\_map\_str\_destroy ( ds\_map\_str map )

Destroys a hash map.

### **Parameters**

тар	A reference to the map to destroy.

5.76.3.2 ds\_str ds\_map\_str\_get\_value ( ds\_map\_str map, ds\_str key )

Retrieves a value associated with a key in the map.

### **Parameters**

тар	A reference to the hash map.
key	The key.

### Returns

A pointer to the value associated with the key, or  $\mathtt{NULL}$  if the key is not in the map. The caller should not modify the string to which this pointer points.

5.76.3.3 ds\_map\_str ds\_map\_str\_init ( const size\_t hash\_size )

Initializes a hash map.

## Parameters

hash_size	The number of possible hash values.

### Returns

A reference to the newly-created hash map.

5.76.3.4 void ds\_map\_str\_insert ( ds\_map\_str map, ds\_str key, ds\_str value )

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

### **Parameters**

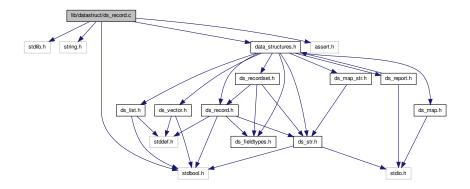

тар	A reference to the hash map.
key	The key.
value	The value.

# 5.77 lib/datastruct/ds\_record.c File Reference

### 5.77.2 Function Documentation

5.77.2.1 void ds\_record\_clear ( ds\_record record )

Clears and free () s all the elements in a record.

### **Parameters**

record | The record.

5.77.2.2 ds\_record\_create ( const size\_t size )

Creates a new record.

### **Parameters**

size The size of the record.

### Returns

A newly created record, or  $\mathtt{NULL}$  on failure.

5.77.2.3 void ds\_record\_destroy ( ds\_record record )

Destroys a record and frees any associated resources.

### **Parameters**

record	The record to destroy.	

5.77.2.4 void ds\_record\_destructor ( void \* record )

A record destructor function.

### **Parameters**

record
--------

5.77.2.5 ds\_str ds\_record\_get\_field ( ds\_record record, const size\_t index )

Retrieves the field at a specified index.

### **Parameters**

record	The record from which to retrieve.
index	The index of the desired field.

## Returns

A pointer to the field, or  $\mathtt{NULL}$  if the index is out of range.

5.77.2.6 ds\_str ds\_record\_get\_next\_data ( ds\_record record )

Returns the next field of the record.

This function returns the data of the "current field", and advances the current field pointer. Subsequent calls to this function will return successive fields.

## **Parameters**

record	The record.

### Returns

A pointer to the next field, or  $\mathtt{NULL}$  if the end of the record has been reached.

5.77.2.7 ds\_str ds\_record\_make\_delim\_string ( ds\_record record, const char delim )

Makes a delimited string from a record.

### **Parameters**

record	The record.
delim	The delimiting character.

### **Returns**

The delimited string, or  $\mathtt{NULL}$  on failure.

5.77.2.8 ds\_str ds\_record\_make\_values\_string ( ds\_record record, enum ds\_field\_types \* types )

Makes a delimited SQL values string from a record.

### **Parameters**

record	The record.
types	An array of types for each field, or NULL to assume they are all strings. The effect of this
	parameter is that string fields are quoted in the values string, whereas non-string fields are
	not.

### Returns

The delimited values string, or  $\mathtt{NULL}$  on failure.

5.77.2.9 void ds\_record\_seek\_start ( ds\_record record )

Sets the current field to the first field of a record.

## Parameters

Talaline to the same to the sa		
record	The record.	

5.77.2.10 void ds\_record\_set\_field ( ds\_record record, const size\_t index, ds\_str field )

Sets a field of a record.

If the field is currently occupied, the existing field is free () d.

# Parameters

record	The record to set.
index	The index of the field to set.
field	The value to which to set the field.

5.77.2.11 size\_t ds\_record\_size ( ds\_record record )

Returns the size of a record.

### **Parameters**

record	The record.

### Returns

The size of the record.

# 5.77.2.12 ds\_record ds\_record\_tokenize ( ds\_str str, const char delim )

Tokenizes a string into a record.

### **Parameters**

str	The string to tokenize.
delim	The delimiting character.

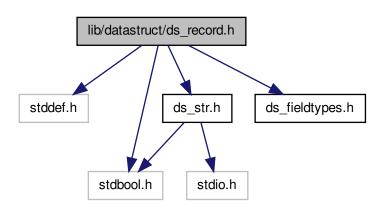

## Returns

A new record containing the tokens.

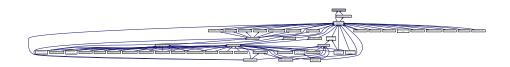

# 5.78 lib/datastruct/ds\_record.h File Reference

Interface to record data structure.

## 5.78.2 Typedef Documentation

5.78.2.1 typedef struct ds\_record\* ds\_record

Typedef for opaque record datatype

# 5.78.3 Function Documentation

5.78.3.1 void ds\_record\_clear ( ds\_record record )

Clears and free () s all the elements in a record.

### **Parameters**

record	The record.

5.78.3.2 ds\_record ds\_record\_create ( const size\_t size )

Creates a new record.

### **Parameters**

size	The size of the record.

### Returns

A newly created record, or  $\mathtt{NULL}$  on failure.

5.78.3.3 void ds\_record\_destroy ( ds\_record record )

Destroys a record and frees any associated resources.

## **Parameters**

record	The record to destroy.

5.78.3.4 void ds\_record\_destructor ( void \* record )

A record destructor function.

### **Parameters**

record	The record to destroy.

5.78.3.5 ds\_str ds\_record\_get\_field ( ds\_record record, const size\_t index )

Retrieves the field at a specified index.

## **Parameters**

record	The record from which to retrieve.
index	The index of the desired field.

### Returns

A pointer to the field, or  $\mathtt{NULL}$  if the index is out of range.

5.78.3.6 ds\_str ds\_record\_get\_next\_data ( ds\_record record )

Returns the next field of the record.

This function returns the data of the "current field", and advances the current field pointer. Subsequent calls to this function will return successive fields.

### **Parameters**

record	The record.

### Returns

A pointer to the next field, or NULL if the end of the record has been reached.

5.78.3.7 ds\_str ds\_record\_make\_delim\_string ( ds\_record record, const char delim )

Makes a delimited string from a record.

### **Parameters**

record	The record.
delim	The delimiting character.

#### Returns

The delimited string, or  $\mathtt{NULL}$  on failure.

5.78.3.8 ds\_str ds\_record\_make\_values\_string ( ds\_record record, enum ds\_field\_types \* types )

Makes a delimited SQL values string from a record.

### **Parameters**

record	The record.
types	An array of types for each field, or NULL to assume they are all strings. The effect of this
	parameter is that string fields are quoted in the values string, whereas non-string fields are
	not.

### Returns

The delimited values string, or  $\mathtt{NULL}$  on failure.

5.78.3.9 void ds\_record\_seek\_start ( ds\_record record )

Sets the current field to the first field of a record.

### **Parameters**

record	The record.

5.78.3.10 void ds\_record\_set\_field ( ds\_record record, const size\_t index, ds\_str field )

Sets a field of a record.

If the field is currently occupied, the existing field is free () d.

### **Parameters**

record	The record to set.
index	The index of the field to set.
field	The value to which to set the field.

5.78.3.11 size\_t ds\_record\_size ( ds\_record record )

Returns the size of a record.

### **Parameters**

record	The record.
--------	-------------

### Returns

The size of the record.

5.78.3.12 ds\_record ds\_record\_tokenize ( ds\_str str, const char delim )

Tokenizes a string into a record.

### **Parameters**

str	The string to tokenize.
delim	The delimiting character.

### Returns

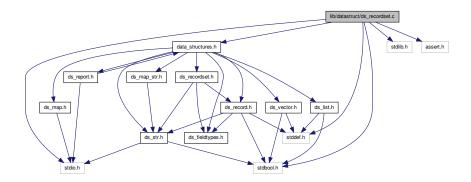

A new record containing the tokens.

# 5.79 lib/datastruct/ds\_recordset.c File Reference

Implementation of query result set structure.

```
#include <stdio.h>
#include <stdlib.h>
#include <stddef.h>
#include <stdbool.h>
#include <assert.h>
#include "data_structures.h"
```

## **Data Structures**

· struct ds recordset

### **Functions**

ds\_recordset ds\_recordset\_create (const size\_t num\_fields)

Creates a new record set.

void ds\_recordset\_destroy (ds\_recordset set)

Destroys a record set and frees associated resources.

ds\_record ds\_recordset\_add\_record (ds\_recordset set, ds\_record record)

Adds a record to a record set.

• size\_t ds\_recordset\_num\_fields (ds\_recordset set)

Returns the number of fields in a record set.

size\_t ds\_recordset\_num\_records (ds\_recordset set)

Returns the number of records in a record set.

• void ds\_recordset\_set\_headers (ds\_recordset set, ds\_record headers)

Sets the record headers in a record set.

void ds\_recordset\_set\_type (ds\_recordset set, const size\_t index, const enum ds\_field\_types type)

Sets the type for a specified field.

ds\_str ds\_recordset\_get\_text\_report (ds\_recordset set)

Returns a formatted text report for the record set.

void ds\_recordset\_seek\_start (ds\_recordset set)

Sets the current record to the first record.

ds\_record ds\_recordset\_next\_record (ds\_recordset set)

Returns the next record in the record set.

• ds\_str ds\_recordset\_get\_next\_insert\_query (ds\_recordset set, const char \*table\_name)

Gets the next SQL INSERT query.

## 5.79.1 Detailed Description

Implementation of query result set structure.

### 5.79.2 Function Documentation

5.79.2.1 ds\_record ds\_recordset\_add\_record ( ds\_recordset set, ds\_record record )

Adds a record to a record set.

The record *must* have the same number of fields as the number of fields provided to ds\_recordset\_create().

### **Parameters**

set	The record set to which to add.
record	The record to add.

### Returns

A pointer to the new record (i.e. it returns the second parameter) or NULL on failure.

5.79.2.2 ds\_recordset ds\_recordset\_create ( const size\_t num\_fields )

Creates a new record set.

### **Parameters**

num_fields	The non-zero number of fields in the record set.

### Returns

A pointer to the new record set.

5.79.2.3 void ds\_recordset\_destroy ( ds\_recordset set )

Destroys a record set and frees associated resources.

### **Parameters**

set	The record set to destroy.

5.79.2.4 ds\_str ds\_recordset\_get\_next\_insert\_query ( ds\_recordset set, const char \* table\_name )

Gets the next SQL INSERT query.

## **Parameters**

set	The set.
table name	The table name into which to insert.

### Returns

The query. Caller is responsible for free () ing.

5.79.2.5 ds\_str ds\_recordset\_get\_text\_report ( ds\_recordset set )

Returns a formatted text report for the record set.

The report is returned as a single multi-line string.

### **Parameters**

set	The record set.

### Returns

A pointer to the report. The caller is responsible for free () ing this pointer.

5.79.2.6 ds\_record ds\_recordset\_next\_record ( ds\_recordset set )

Returns the next record in the record set.

This function returns the "current record", and advances the current record pointer. Subsequent calls to this function will return successive records.

### **Parameters**

set	The record set.

#### **Returns**

A pointer to the next record, or  $\mathtt{NULL}$  if the end of the record set has been reached.

5.79.2.7 size\_t ds\_recordset\_num\_fields ( ds\_recordset set )

Returns the number of fields in a record set.

#### **Parameters**

set	The record set.

## Returns

The number of fields in the record set.

5.79.2.8 size\_t ds\_recordset\_num\_records ( ds\_recordset set )

Returns the number of records in a record set.

# **Parameters**

set	The record set.
-----	-----------------

# Returns

The number of records in the record set.

5.79.2.9 void ds\_recordset\_seek\_start ( ds\_recordset set )

Sets the current record to the first record.

# **Parameters**

set	The record set.

5.79.2.10 void ds\_recordset\_set\_headers ( ds\_recordset set, ds\_record headers )

Sets the record headers in a record set.

### **Parameters**

set	The record set.
headers	The headers, in the form of a ds_record of strings. The list <i>must</i> have the same number of
	elements as the number of fields provided to ds_recordset_create().

5.79.2.11 void ds\_recordset\_set\_type ( ds\_recordset set, const size\_t index, const enum ds\_field\_types type )

Sets the type for a specified field.

### **Parameters**

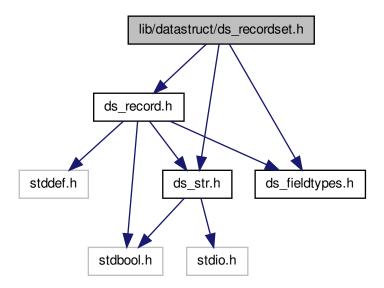

set	The record set.
index	The index to set.
type	The type for the field at the specified index.

# 5.80 lib/datastruct/ds\_recordset.h File Reference

# **Typedefs**

typedef struct ds\_recordset \* ds\_recordset

# **Functions**

- ds\_recordset ds\_recordset\_create (const size\_t num\_fields)
  - Creates a new record set.
- void ds\_recordset\_destroy (ds\_recordset set)
  - Destroys a record set and frees associated resources.
- ds\_record ds\_recordset\_add\_record (ds\_recordset set, ds\_record record)
  - Adds a record to a record set.
- size\_t ds\_recordset\_num\_fields (ds\_recordset set)
  - Returns the number of fields in a record set.
- size\_t ds\_recordset\_num\_records (ds\_recordset set)
  - Returns the number of records in a record set.
- void ds\_recordset\_set\_headers (ds\_recordset set, ds\_record headers)
  - Sets the record headers in a record set.
- void ds\_recordset\_set\_type (ds\_recordset set, const size\_t index, const enum ds\_field\_types type)
  - Sets the type for a specified field.

ds\_str ds\_recordset\_get\_text\_report (ds\_recordset set)

Returns a formatted text report for the record set.

• ds\_str ds\_recordset\_get\_next\_insert\_query (ds\_recordset set, const char \*table\_name)

Gets the next SQL INSERT query.

void ds\_recordset\_seek\_start (ds\_recordset set)

Sets the current record to the first record.

ds\_record ds\_recordset\_next\_record (ds\_recordset set)

Returns the next record in the record set.

# 5.80.2 Typedef Documentation

5.80.2.1 typedef struct ds\_recordset\* ds\_recordset

Typedef for opaque record set data type

## 5.80.3 Function Documentation

5.80.3.1 ds\_record ds\_recordset\_add\_record ( ds\_recordset set, ds\_record record )

Adds a record to a record set.

The record *must* have the same number of fields as the number of fields provided to ds\_recordset\_create().

### **Parameters**

set	The record set to which to add.
record	The record to add.

# Returns

A pointer to the new record (i.e. it returns the second parameter) or NULL on failure.

5.80.3.2 ds\_recordset ds\_recordset\_create ( const size\_t num\_fields )

Creates a new record set.

num_fields The non-zero number of fields in the record set.
---

#### Returns

A pointer to the new record set.

5.80.3.3 void ds\_recordset\_destroy ( ds\_recordset set )

Destroys a record set and frees associated resources.

#### **Parameters**

set	The record set to destroy.
	,

5.80.3.4 ds\_str ds\_recordset\_get\_next\_insert\_query ( ds\_recordset set, const char \* table\_name )

Gets the next SQL INSERT query.

#### **Parameters**

set	The set.
table_name	The table name into which to insert.

### Returns

The query. Caller is responsible for free () ing.

5.80.3.5 ds\_str ds\_recordset\_get\_text\_report ( ds\_recordset set )

Returns a formatted text report for the record set.

The report is returned as a single multi-line string.

# Parameters

set	The record set.

#### **Returns**

A pointer to the report. The caller is responsible for free () ing this pointer.

5.80.3.6 ds\_record ds\_recordset\_next\_record ( ds\_recordset set )

Returns the next record in the record set.

This function returns the "current record", and advances the current record pointer. Subsequent calls to this function will return successive records.

#### **Parameters**

_		
	set	The record set.

### **Returns**

A pointer to the next record, or  $\mathtt{NULL}$  if the end of the record set has been reached.

5.80.3.7 size\_t ds\_recordset\_num\_fields ( ds\_recordset set )

Returns the number of fields in a record set.

# **Parameters**

set	The record set.

### Returns

The number of fields in the record set.

5.80.3.8 size\_t ds\_recordset\_num\_records ( ds\_recordset set )

Returns the number of records in a record set.

#### **Parameters**

set	The record set.
-----	-----------------

### Returns

The number of records in the record set.

5.80.3.9 void ds\_recordset\_seek\_start ( ds\_recordset set )

Sets the current record to the first record.

# **Parameters**

set	The record set.

5.80.3.10 void ds\_recordset\_set\_headers ( ds\_recordset set, ds\_record headers )

Sets the record headers in a record set.

### **Parameters**

set	The record set.
headers	The headers, in the form of a ds_record of strings. The list <i>must</i> have the same number of
	elements as the number of fields provided to ds_recordset_create().

5.80.3.11 void ds\_recordset\_set\_type ( ds\_recordset set, const size\_t index, const enum ds\_field\_types type )

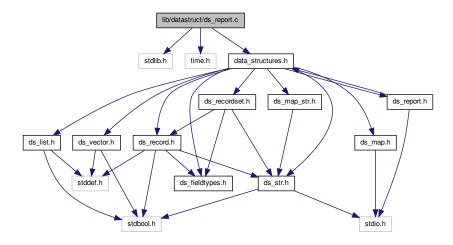

Sets the type for a specified field.

set	The record set.
index	The index to set.
type	The type for the field at the specified index.

# 5.81 lib/datastruct/ds\_report.c File Reference

### 5.81.3 Function Documentation

5.81.3.1 ds\_report ds\_report\_create ( void )

Creaes a new report.

#### Returns

The new report, or  $\mathtt{NULL}$  on failure.

5.81.3.2 void ds\_report\_destroy ( ds\_report report )

Destroys a report and frees resources.

#### **Parameters**

_		
	report	The report to destroy.

5.81.3.3 void ds\_report\_print\_text\_report (  $ds_report_re$ 

Prints a text report to a file.

# **Parameters**

report	The report.
outfile	A pointer to the file to which to print.

5.81.3.4 void ds\_report\_set\_report\_text ( ds\_report report, ds\_str report\_text )

Sets the report text.

report	The report.
report_text	The text. This string will be automatically freed when the report is destroyed, so you should
	not pass a string which you wish to retain.

5.81.3.5 void ds\_report\_set\_title ( ds\_report report, ds\_str title )

Sets the report title.

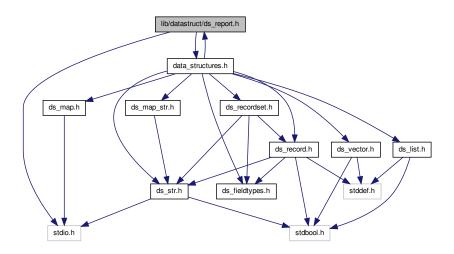

### **Parameters**

report	The report.
title	The title. This string will be automatically freed when the report is destroyed, so you should
	not pass a string which you wish to retain.

# 5.82 lib/datastruct/ds\_report.h File Reference

Include dependency graph for ds\_str.c:

# **Data Structures**

• struct ds\_str

### **Functions**

 ds str ds str create direct (char \*init str, const size t init str size) Creates a string using allocated memory. ds str ds str create (const char \*init str) Creates a new string from a C-style string. ds\_str ds\_str\_dup (ds\_str src) Creates a new string from another string. ds str ds str create sprintf (const char \*format,...) Creates a string with sprintf()-type format. void ds\_str\_destroy (ds\_str str) Destroys a string and releases allocated resources. void ds\_str\_destructor (void \*str) Destroys a string and releases allocated resources. ds\_str ds\_str\_assign (ds\_str dst, ds\_str src) Assigns a string to another. ds\_str ds\_str\_assign\_cstr (ds\_str dst, const char \*src) Assigns a C-style string to a string. const char \* ds\_str\_cstr (ds\_str str) Returns a C-style string containing the string's contents. size\_t ds\_str\_length (ds\_str str) Returns the length of a string. ds str ds str size to fit (ds str str) Reduces a string's capacity to fit its length. ds\_str ds\_str\_concat (ds\_str dst, ds\_str src) Concatenates two strings. ds str ds str concat cstr (ds str dst, const char \*src) Concatenates a C-style string to a string. ds\_str ds\_str\_trunc (ds\_str str, const size\_t length) Truncates a string. unsigned long ds str hash (ds str str) Calculates a hash of a string. int ds\_str\_compare (ds\_str s1, ds\_str s2) Compares two strings. int ds\_str\_compare\_cstr (ds\_str s1, const char \*s2) Compares a string with a C-style string. • int ds\_str\_strchr (ds\_str str, const char ch, const int start) Returns index of first occurence of a character. ds\_str ds\_str\_substr\_left (ds\_str str, const size\_t numchars) Returns a left substring. ds\_str ds\_str\_substr\_right (ds\_str str, const size\_t numchars) Returns a right substring. void ds\_str\_split (ds\_str src, ds\_str \*left, ds\_str \*right, const char sc) Splits a string. · void ds str trim leading (ds str str) Trims leading whitespace in-place. void ds\_str\_trim\_trailing (ds\_str str) Trims trailing whitespace in-place. void ds str trim (ds str str) Trims leading and trailing whitespace in-place. char ds\_str\_char\_at\_index (ds\_str str, const size\_t index)

Returns the character at a specified index.

bool ds\_str\_is\_empty (ds\_str str)

Checks if a string is empty.

• bool ds\_str\_is\_alnum (ds\_str str)

Checks is a string contains only alphanumeric characters.

• void ds\_str\_clear (ds\_str str)

Clears (empties) a string.

• bool ds\_str\_intval (ds\_str str, const int base, int \*value)

Gets the integer value of a string.

• bool ds\_str\_doubleval (ds\_str str, double \*value)

Gets the double value of a string.

ds\_str ds\_str\_getline (ds\_str str, const size\_t size, FILE \*fp)

Gets a line from a file and assigns it to a string.

• ds str ds str decorate (ds str str, ds str left dec, ds str right dec)

Brackets a string with decoration strings.

## 5.83.2 Function Documentation

5.83.2.1 ds\_str ds\_str\_assign ( ds\_str dst, ds\_str src )

Assigns a string to another.

#### **Parameters**

dst	The destination string.
src	The source string.

#### Returns

dst on success, NULL on failure.

5.83.2.2 ds\_str ds\_str\_assign\_cstr ( ds\_str dst, const char \* src )

Assigns a C-style string to a string.

dst	The destination string.
src	The source C-style string.

#### Returns

dst on success, NULL on failure.

5.83.2.3 char ds\_str\_char\_at\_index ( ds\_str str, const size\_t index )

Returns the character at a specified index.

#### **Parameters**

str	The string.
index	The specified index.

### Returns

The character at the specified index.

5.83.2.4 void ds\_str\_clear ( ds\_str str )

Clears (empties) a string.

#### **Parameters**

-4	The state of
SIT	l the string
0.,	The same.

5.83.2.5 int ds\_str\_compare ( ds\_str s1, ds\_str s2 )

Compares two strings.

### **Parameters**

s1	The first string.
s2	The second string.

# Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.83.2.6 int ds\_str\_compare\_cstr (  $ds_str s1$ , const char \* s2 )

Compares a string with a C-style string.

#### **Parameters**

s1	The first string.
s2	The second, C-Style string.

# Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.83.2.7 ds\_str ds\_str\_concat ( ds\_str dst, ds\_str src )

Concatenates two strings.

#### **Parameters**

dst	The destination string.
src	The source strings.

## Returns

The destination string, or  $\mathtt{NULL}$  on failure.

5.83.2.8 ds\_str ds\_str\_concat\_cstr ( ds\_str dst, const char \* src )

Concatenates a C-style string to a string.

#### **Parameters**

dst	The destination string.
src	The source strings.

### Returns

The destination string, or  $\mathtt{NULL}$  on failure.

5.83.2.9 ds\_str ds\_str\_create ( const char \* init\_str )

Creates a new string from a C-style string.

#### **Parameters**

init_str	The C-style string.

# Returns

The new string, or NULL on failure.

5.83.2.10 ds\_str\_ds\_str\_create\_direct ( char \* init\_str, const size\_t init\_str\_size )

Creates a string using allocated memory.

The normal construction functions duplicate the string used to create it. In cases where allocated memory is already available (e.g. in  $ds\_str\_create\_sprintf()$ ) this function allows that memory to be directly assigned to the string, avoiding an unnecessary duplication.

init_str	The allocated memory. IMPORTANT: If the construction of the string fails, this memory will be
	free()d.
init_str_size	The size of the allocated memory. IMPORTANT: The string's length is assumed to be one less
	than this quantity, and a call to strlen() is NOT performed.

### Returns

The new string, or NULL on failure.

5.83.2.11 ds\_str ds\_str\_create\_sprintf ( const char \* format, ... )

Creates a string with sprintf()-type format.

#### **Parameters**

format	The format string.
	The subsequent arguments as specified by the format string.

### Returns

The new string, or NULL on failure.

5.83.2.12 const char\* ds\_str\_cstr ( ds\_str str )

Returns a C-style string containing the string's contents.

### **Parameters**

str	The string.

### Returns

The C-style string containing the string's contents. The caller should not directly modify this string.

5.83.2.13 ds\_str ds\_str\_decorate ( ds\_str str, ds\_str left\_dec, ds\_str right\_dec )

Brackets a string with decoration strings.

# Parameters

str	The string to decorate.
left_dec	The string to add to the left of str.
right dec	The string to add to the right of str. or NULL to add left dec to both sides.

# Returns

The decorated string.

5.83.2.14 void ds\_str\_destroy ( ds\_str str )

Destroys a string and releases allocated resources.

str The string to destroy	
---------------------------	--

5.83.2.15 void ds\_str\_destructor ( void \* str )

Destroys a string and releases allocated resources.

This function calls  $ds\_str\_destroy()$ , and can be passed to a data structure expecting a destructor function with the signature void (\*)(void \*).

### **Parameters**

str	The string to destroy.

5.83.2.16 bool ds\_str\_doubleval ( ds\_str str, double \* value )

Gets the double value of a string.

#### **Parameters**

str	The string.
value	A pointer to the double in which to store the value. Zero is stored if the string does not contain
	a valid double value.

### Returns

true on successful conversion, false if the string does not contain a valid double value.

5.83.2.17 ds\_str ds\_str\_dup ( ds\_str src )

Creates a new string from another string.

# Parameters

src	The other string.

### **Returns**

The new string, or  $\mathtt{NULL}$  on failure.

5.83.2.18 ds\_str ds\_str\_getline ( ds\_str str, const size\_t size, FILE \* fp )

Gets a line from a file and assigns it to a string.

Any trailing newline character is stripped.

## **Parameters**

str	The string.
size	The maximum number of bytes to read, including the null.
fp	The file pointer from which to read.

### Returns

dst

5.83.2.19 unsigned long ds\_str\_hash ( ds\_str str )

Calculates a hash of a string.

Uses Dan Bernstein's djb2 algorithm.

#### **Parameters**

str	The string.

#### Returns

The hash value

5.83.2.20 bool ds\_str\_intval ( ds\_str str, const int base, int \* value )

Gets the integer value of a string.

#### **Parameters**

str	The string.
base	The base of the integer. This has the same meaning as the third argument to standard C
	strtol().
value	A pointer to the integer in which to store the value. Zero is stored if the string does not contain
	a valid integer value.

### **Returns**

true on successful conversion, false if the string does not contain a valid integer value.

5.83.2.21 bool ds\_str\_is\_alnum ( ds\_str str )

Checks is a string contains only alphanumeric characters.

The string must contain *some* alphanumeric characters to check true, i.e. the string must be non-empty. Thus it can be used to check that a string does indeed contain content, and that that content is solely alphanumeric.

#### **Parameters**

str	The string.

# Returns

 $\verb|true| if the string contains only alphanumeric characters|, \verb|false| otherwise|.$ 

5.83.2.22 bool ds\_str\_is\_empty ( ds\_str str )

Checks if a string is empty.

str	The string.

# Returns

true is the string is empty, false otherwise.

5.83.2.23 size\_t ds\_str\_length ( ds\_str str )

Returns the length of a string.

### **Parameters**

ctr	The string
Sti	The string.

## Returns

The length of the string.

5.83.2.24 ds\_str ds\_str\_size\_to\_fit ( ds\_str str )

Reduces a string's capacity to fit its length.

### **Parameters**

str	The string to size.
-----	---------------------

## Returns

str, or NULL on failure.

5.83.2.25 void ds\_str\_split ( ds\_str src, ds\_str \* left, ds\_str \* right, const char sc )

Splits a string.

### **Parameters**

src	The string to split.
left	Pointer to left substring (modified)
right	Pointer to right substring (modified)
SC	Split character.

5.83.2.26 int ds\_str\_strchr ( ds\_str str, const char ch, const int start )

Returns index of first occurence of a character.

#### **Parameters**

str	The string.
ch	The character for which to search.
start	The index of the string at which to start looking. Set this to non-zero to begin searching from a
	point other than the first character of the string.

# Returns

The index of the first occurence, or -1 if the character was not found.

5.83.2.27 ds\_str ds\_str\_substr\_left ( ds\_str str, const size\_t numchars )

Returns a left substring.

# **Parameters**

str	The string.
numchars	The number of left characters to return. If this is greater than the length of the string, the whole
	string is returned.

# Returns

A new string representing the substring.

5.83.2.28 ds\_str ds\_str\_substr\_right ( ds\_str str, const size\_t numchars )

Returns a right substring.

# **Parameters**

str	The string.
numchars	The number of right characters to return. If this is greater than the length of the string, the
	whole string is returned.

# Returns

A new string representing the substring.

5.83.2.29 void ds\_str\_trim ( ds\_str str )

Trims leading and trailing whitespace in-place.

#### **Parameters**

-		
	str	The string.

5.83.2.30 void ds\_str\_trim\_leading ( ds\_str str )

Trims leading whitespace in-place.

### **Parameters**

str	The string.

5.83.2.31 void ds\_str\_trim\_trailing ( ds\_str str )

Trims trailing whitespace in-place.

str	The string.

5.83.2.32 ds\_str ds\_str\_trunc ( ds\_str str, const size\_t length )

Truncates a string.

# **Parameters**

str	The string.
length	The new length to which to truncate.

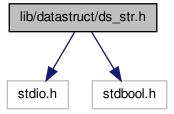

### Returns

The original string, or  $\mathtt{NULL}$  on failure.

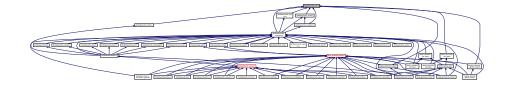

# 5.84 lib/datastruct/ds\_str.h File Reference

# 5.84.2 Typedef Documentation

5.84.2.1 typedef struct ds\_str\* ds\_str

Opaque data type for string

### 5.84.3 Function Documentation

5.84.3.1 ds\_str ds\_str\_assign ( ds\_str dst, ds\_str src )

Assigns a string to another.

# **Parameters**

dst	The destination string.
src	The source string.

### **Returns**

 ${\tt dst}$  on success,  ${\tt NULL}$  on failure.

5.84.3.2 ds\_str ds\_str\_assign\_cstr ( ds\_str dst, const char \* src )

Assigns a C-style string to a string.

dst	The destination string.
src	The source C-style string.

#### Returns

dst on success, NULL on failure.

5.84.3.3 char ds\_str\_char\_at\_index ( ds\_str str, const size\_t index )

Returns the character at a specified index.

#### **Parameters**

str	The string.
index	The specified index.

### Returns

The character at the specified index.

5.84.3.4 void ds\_str\_clear ( ds\_str str )

Clears (empties) a string.

#### **Parameters**

-4	The state of
SIT	l the string
0.,	The same.

5.84.3.5 int ds\_str\_compare ( ds\_str s1, ds\_str s2 )

Compares two strings.

### **Parameters**

s1	The first string.
s2	The second string.

# Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.84.3.6 int ds\_str\_compare\_cstr ( ds\_str s1, const char \*s2 )

Compares a string with a C-style string.

#### **Parameters**

s1	The first string.
s2	The second, C-Style string.

# Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.84.3.7 ds\_str ds\_str\_concat ( ds\_str dst, ds\_str src )

Concatenates two strings.

### **Parameters**

dst	The destination string.
src	The source strings.

## Returns

The destination string, or  $\mathtt{NULL}$  on failure.

5.84.3.8 ds\_str ds\_str\_concat\_cstr ( ds\_str dst, const char \* src )

Concatenates a C-style string to a string.

#### **Parameters**

dst	The destination string.
src	The source strings.

### Returns

The destination string, or  $\mathtt{NULL}$  on failure.

5.84.3.9 ds\_str ds\_str\_create ( const char \* init\_str )

Creates a new string from a C-style string.

#### **Parameters**

init_str	The C-style string.

# Returns

The new string, or NULL on failure.

 $5.84.3.10 \quad \text{ds\_str\_create\_direct ( char} * \textit{init\_str, const size\_t init\_str\_size )}$ 

Creates a string using allocated memory.

The normal construction functions duplicate the string used to create it. In cases where allocated memory is already available (e.g. in  $ds\_str\_create\_sprintf()$ ) this function allows that memory to be directly assigned to the string, avoiding an unnecessary duplication.

init_str	The allocated memory. IMPORTANT: If the construction of the string fails, this memory will be	
	free()d.	
init_str_size	The size of the allocated memory. IMPORTANT: The string's length is assumed to be one less	
	than this quantity, and a call to strlen() is NOT performed.	

#### Returns

The new string, or NULL on failure.

5.84.3.11 ds\_str ds\_str\_create\_sprintf ( const char \* format, ... )

Creates a string with sprintf()-type format.

#### **Parameters**

format	The format string.
	The subsequent arguments as specified by the format string.

### Returns

The new string, or NULL on failure.

5.84.3.12 const char\* ds\_str\_cstr ( ds\_str str )

Returns a C-style string containing the string's contents.

### **Parameters**

str	The string.

### Returns

The C-style string containing the string's contents. The caller should not directly modify this string.

5.84.3.13 ds\_str ds\_str\_decorate ( ds\_str str, ds\_str left\_dec, ds\_str right\_dec )

Brackets a string with decoration strings.

# Parameters

str	The string to decorate.
left_dec	The string to add to the left of str.
right_dec	The string to add to the right of str, or NULL to add left_dec to both sides.

# Returns

The decorated string.

5.84.3.14 void ds\_str\_destroy ( ds\_str str )

Destroys a string and releases allocated resources.

str   The string to destroy	
-----------------------------	--

5.84.3.15 void ds\_str\_destructor (void \* str)

Destroys a string and releases allocated resources.

This function calls  $ds\_str\_destroy()$ , and can be passed to a data structure expecting a destructor function with the signature void (\*)(void \*).

# **Parameters**

str	The string to destroy.

5.84.3.16 bool ds\_str\_doubleval ( ds\_str str, double \* value )

Gets the double value of a string.

#### **Parameters**

str	The string.
value	A pointer to the double in which to store the value. Zero is stored if the string does not contain
	a valid double value.

### Returns

true on successful conversion, false if the string does not contain a valid double value.

5.84.3.17 ds\_str ds\_str\_dup ( ds\_str src )

Creates a new string from another string.

# Parameters

src	The other string.

### **Returns**

The new string, or  $\mathtt{NULL}$  on failure.

5.84.3.18 ds\_str ds\_str\_getline ( ds\_str str, const size\_t size, FILE \* fp )

Gets a line from a file and assigns it to a string.

Any trailing newline character is stripped.

## **Parameters**

str	The string.
size	The maximum number of bytes to read, including the null.
fp	The file pointer from which to read.

### Returns

dst

5.84.3.19 unsigned long ds\_str\_hash ( ds\_str str )

Calculates a hash of a string.

Uses Dan Bernstein's djb2 algorithm.

#### **Parameters**

str	The string.

#### Returns

The hash value

5.84.3.20 bool ds\_str\_intval ( ds\_str str, const int base, int \* value )

Gets the integer value of a string.

#### **Parameters**

str	The string.
base	The base of the integer. This has the same meaning as the third argument to standard C
	strtol().
value	A pointer to the integer in which to store the value. Zero is stored if the string does not contain
	a valid integer value.

### **Returns**

true on successful conversion, false if the string does not contain a valid integer value.

5.84.3.21 bool ds\_str\_is\_alnum ( ds\_str str )

Checks is a string contains only alphanumeric characters.

The string must contain some alphanumeric characters to check true, i.e. the string must be non-empty. Thus it can be used to check that a string does indeed contain content, and that that content is solely alphanumeric.

#### **Parameters**

str	The string.

# Returns

 $\verb|true| if the string contains only alphanumeric characters|, \verb|false| otherwise|.$ 

5.84.3.22 bool ds\_str\_is\_empty ( ds\_str str )

Checks if a string is empty.

str	The string.

# Returns

true is the string is empty, false otherwise.

5.84.3.23 size\_t ds\_str\_length ( ds\_str str )

Returns the length of a string.

### **Parameters**

str	The string.

## Returns

The length of the string.

5.84.3.24 ds\_str ds\_str\_size\_to\_fit ( ds\_str str )

Reduces a string's capacity to fit its length.

### **Parameters**

str	The string to size.

## Returns

str, or NULL on failure.

5.84.3.25 void ds\_str\_split ( ds\_str src, ds\_str \* left, ds\_str \* right, const char sc )

Splits a string.

### **Parameters**

src	The string to split.
left	Pointer to left substring (modified)
right	Pointer to right substring (modified)
SC	Split character.

5.84.3.26 int ds\_str\_strchr ( ds\_str str, const char ch, const int start )

Returns index of first occurence of a character.

### **Parameters**

str	The string.
ch	The character for which to search.
start	The index of the string at which to start looking. Set this to non-zero to begin searching from a
	point other than the first character of the string.

# Returns

The index of the first occurence, or -1 if the character was not found.

5.84.3.27 ds\_str ds\_str\_substr\_left ( ds\_str str, const size\_t numchars )

Returns a left substring.

# **Parameters**

str	The string.
numchars	The number of left characters to return. If this is greater than the length of the string, the whole
	string is returned.

# Returns

A new string representing the substring.

5.84.3.28 ds\_str ds\_str\_substr\_right ( ds\_str str, const size\_t numchars )

Returns a right substring.

# **Parameters**

str	The string.
numchars	The number of right characters to return. If this is greater than the length of the string, the
	whole string is returned.

# Returns

A new string representing the substring.

5.84.3.29 void ds\_str\_trim ( ds\_str str )

Trims leading and trailing whitespace in-place.

#### **Parameters**

-		
	str	The string.

5.84.3.30 void ds\_str\_trim\_leading ( ds\_str str )

Trims leading whitespace in-place.

### **Parameters**

str	The string.

5.84.3.31 void ds\_str\_trim\_trailing ( ds\_str str )

Trims trailing whitespace in-place.

-4	The atriner
Str	The sinna.

5.84.3.32 ds\_str ds\_str\_trunc ( ds\_str str, const size\_t length )

Truncates a string.

### **Parameters**

str	The string.
length	The new length to which to truncate.

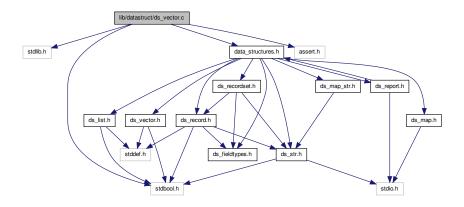

## Returns

The original string, or  $\mathtt{NULL}$  on failure.

# 5.85 lib/datastruct/ds\_vector.c File Reference

Implementation of generic doubly-linked vector data structure.

```
#include <stdlib.h>
#include <stdbool.h>
#include <assert.h>
#include "data_structures.h"
Include dependency graph for ds_vector.c:
```

# **Data Structures**

• struct ds\_vector

# **Functions**

• ds\_vector ds\_vector\_create (const size\_t size, const bool free\_on\_delete, void(\*destructor)(void \*))

Creates a new vector.

void ds\_vector\_destroy (ds\_vector vector)

Destroys a vector and frees any associated resources.

void ds\_vector\_destructor (void \*vector)

A vector destructor function.

void ds\_vector\_clear (ds\_vector vector)

Clears all the elements in a vector.

• void ds\_vector\_set (ds\_vector vector, const size\_t index, void \*element)

Sets an element of a vector.

void \* ds\_vector\_element (ds\_vector vector, const size\_t index)

Retrieves the data at a specified index.

• size\_t ds\_vector\_size (ds\_vector vector)

Returns the size of a vector.

void ds\_vector\_seek\_start (ds\_vector vector)

Sets the current element to the first element of a vector.

void \* ds\_vector\_get\_next\_data (ds\_vector vector)

Returns the next element of the vector.

# 5.85.1 Detailed Description

Implementation of generic doubly-linked vector data structure.

### 5.85.2 Function Documentation

5.85.2.1 void ds\_vector\_clear ( ds\_vector vector )

Clears all the elements in a vector.

If the vector was created with  $free\_on\_delete$ , the elements are free () d prior to being cleared (i.e. set to NULL).

# Parameters

vector The vector.	
--------------------	--

5.85.2.2 ds\_vector ds\_vector\_create ( const size\_t size, const bool free\_on\_delete, void(\*)(void \*) destructor )

Creates a new vector.

# **Parameters**

size	The size of the vector.
free_on_delete	Set to true if the vector elements should be destroyed when removed from the vector, and
	when the vector itself is destroyed. If set to false, the caller is responsible for destroying the
	elements prior to destroying the vector.
destructor	Pointer to a destructor function to use for destroying the vector elements, when free_on
	delete is true. If this is set to NULL, free() from the standard C library will be used to
	destroy the elements.

### Returns

A newly created vector, or  $\mathtt{NULL}$  on failure.

5.85.2.3 void ds\_vector\_destroy ( ds\_vector vector )

Destroys a vector and frees any associated resources.

#### **Parameters**

	The constant destant
vector	The vector to destroy.
	100.0. 10 000.0.0.

5.85.2.4 void ds\_vector\_destructor ( void \* vector )

A vector destructor function.

This function may be passed to  $ds\_vector\_create()$  when creating a vector of vectors. It calls  $ds\_vector\_destroy()$ , but the parameter of  $ds\_vector\_destroy()$  is not compatible with the function signature expected by  $ds\_vector\_create()$ , so this function provides an appropriate interface.

#### **Parameters**

vector	The vector to destroy.

5.85.2.5 void\* ds\_vector\_element ( ds\_vector vector, const size\_t index )

Retrieves the data at a specified index.

#### **Parameters**

vector	The vector from which to retrieve.
index	The index of the desired element.

### Returns

A pointer to the data, or NULL if the index is out of range.

5.85.2.6 void\* ds\_vector\_get\_next\_data ( ds\_vector vector )

Returns the next element of the vector.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

# **Parameters**

vector The vector.
--------------------

#### Returns

A pointer to the next element, or  $\mathtt{NULL}$  if the end of the vector has been reached.

5.85.2.7 void ds\_vector\_seek\_start ( ds\_vector vector )

Sets the current element to the first element of a vector.

vector	The vector.

5.85.2.8 void ds\_vector\_set ( ds\_vector vector, const size\_t index, void \* element )

Sets an element of a vector.

If the element is currently occupied, the existing element is free () d.

### **Parameters**

vector	The vector to which to set.
index	The index of the element to set.
element	The element to set.

5.85.2.9 size\_t ds\_vector\_size ( ds\_vector vector )

Returns the size of a vector.

### **Parameters**

vector	The vector.

### Returns

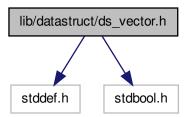

The size of the vector.

# 5.86 lib/datastruct/ds\_vector.h File Reference

# 5.86.2 Typedef Documentation

5.86.2.1 typedef struct ds\_vector\* ds\_vector

Typedef for opaque vector datatype

#### 5.86.3 Function Documentation

5.86.3.1 void ds\_vector\_clear ( ds\_vector vector )

Clears all the elements in a vector.

If the vector was created with  $free\_on\_delete$ , the elements are free() d prior to being cleared (i.e. set to NULL).

#### **Parameters**

vector	The vector.

5.86.3.2 ds\_vector ds\_vector\_create ( const size\_t size, const bool free\_on\_delete, void(\*)(void \*) destructor )

Creates a new vector.

#### **Parameters**

size	The size of the vector.
free_on_delete	Set to true if the vector elements should be destroyed when removed from the vector, and
	when the vector itself is destroyed. If set to false, the caller is responsible for destroying the
	elements prior to destroying the vector.
destructor	Pointer to a destructor function to use for destroying the vector elements, when free_on
	delete is true. If this is set to NULL, free() from the standard C library will be used to
	destroy the elements.

#### **Returns**

A newly created vector, or  $\mathtt{NULL}$  on failure.

5.86.3.3 void ds\_vector\_destroy ( ds\_vector vector )

Destroys a vector and frees any associated resources.

### **Parameters**

vector	The vector to destroy.
--------	------------------------

5.86.3.4 void ds\_vector\_destructor ( void \* vector )

A vector destructor function.

This function may be passed to  $ds\_vector\_create()$  when creating a vector of vectors. It calls  $ds\_vector\_destroy()$ , but the parameter of  $ds\_vector\_destroy()$  is not compatible with the function signature expected by  $ds\_vector\_create()$ , so this function provides an appropriate interface.

## **Parameters**

vector	The vector to destroy.

5.86.3.5 void\* ds\_vector\_element ( ds\_vector vector, const size\_t index )

Retrieves the data at a specified index.

## **Parameters**

vector	The vector from which to retrieve.
index	The index of the desired element.

# Returns

A pointer to the data, or NULL if the index is out of range.

5.86.3.6 void\* ds\_vector\_get\_next\_data ( ds\_vector vector )

Returns the next element of the vector.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

### **Parameters**

vector	The vector.

### Returns

A pointer to the next element, or  $\mathtt{NULL}$  if the end of the vector has been reached.

5.86.3.7 void ds\_vector\_seek\_start ( ds\_vector vector )

Sets the current element to the first element of a vector.

### **Parameters**

vector	The vector.

5.86.3.8 void ds\_vector\_set ( ds\_vector vector, const size\_t index, void \* element )

Sets an element of a vector.

If the element is currently occupied, the existing element is free () d.

# **Parameters**

vector	The vector to which to set.
index	The index of the element to set.
element	The element to set.

5.86.3.9 size\_t ds\_vector\_size ( ds\_vector vector )

Returns the size of a vector.

### **Parameters**

vector	The vector.

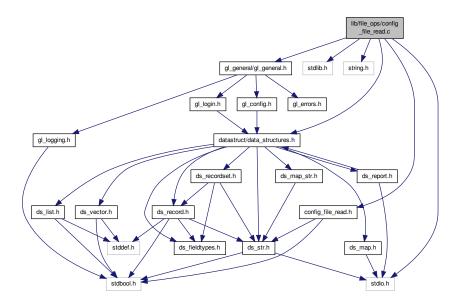

### Returns

The size of the vector.

# 5.87 lib/file\_ops/config\_file\_read.c File Reference

Implementation of configuration file reading functionality.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "gl_general/gl_general.h"
#include "datastruct/data_structures.h"
#include "config_file_read.h"
Include dependency graph for config_file_read.c:
```

# Macros

- #define MAX\_BUFFER\_SIZE 1024
- #define CONFIG\_MAP\_SIZE 100

# **Functions**

• bool config\_init (void)

Initializes configuration data.

int config\_file\_read (const char \*filename)

Reads a configuration file and stores the key-value pairs.

ds\_str config\_value\_get (ds\_str key)

Returns the value associated with a key.

• ds\_str config\_value\_get\_cstr (const char \*key)

Returns the value associated with a C-style string key.

• void config\_value\_set (ds\_str key, ds\_str value)

Sets a key-value in the configuration structure.

void config\_free (void)

Frees the resources used by this module.

### 5.87.1 Detailed Description

Implementation of configuration file reading functionality. This module reads configuration files in the format "key = value" and makes those values available. Leading and trailing whitespace is removed for both the key and the value. Blank lines and lines starting with a '#' are ignored in the configuration file.

**Author** 

Paul Griffiths

### Copyright

### 5.87.2 Macro Definition Documentation

5.87.2.1 #define CONFIG\_MAP\_SIZE 100

Size to use for the hash map to contain the key-value pairs

5.87.2.2 #define MAX\_BUFFER\_SIZE 1024

Maximum size of buffers

### 5.87.3 Function Documentation

5.87.3.1 int config\_file\_read ( const char \* filename )

Reads a configuration file and stores the key-value pairs.

### **Parameters**

filename The name of the configuration file.

### Returns

CONFIG\_FILE\_OK on success, CONFIG\_FILE\_NO\_FILE if the specified file could not be opened for reading, CONFIG\_FILE\_MALFORMED\_FILE if the configuration file was improperly formed.

5.87.3.2 void config\_free ( void )

Frees the resources used by this module.

The user should make copies of any required keys or values prior to calling this function. This function need not be called if  $config\_file\_read()$  returned an error.

5.87.3.3 bool config\_init ( void )

Initializes configuration data.

### Returns

true on success, false on failure.

5.87.3.4 ds\_str config\_value\_get ( ds\_str key )

Returns the value associated with a key.

### **Parameters**

key	The specified key.

# Returns

A pointer to the associated value, or  $\mathtt{NULL}$  if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.87.3.5 ds\_str config\_value\_get\_cstr ( const char \* key )

Returns the value associated with a C-style string key.

### **Parameters**

key	The specified key.

### **Returns**

A pointer to the associated value, or  $\mathtt{NULL}$  if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.87.3.6 void config\_value\_set ( ds\_str key, ds\_str value )

Sets a key-value in the configuration structure.

### **Parameters**

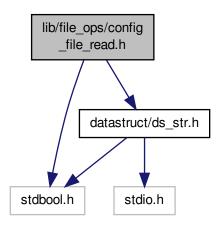

key	The key.
value	The value.

# 5.88 lib/file\_ops/config\_file\_read.h File Reference

5.88.2.1 #define CONFIG\_FILE\_MALFORMED\_FILE 2

Return status when configuration file is improperly formed

5.88.2.2 #define CONFIG\_FILE\_NO\_FILE 1

Return status when unable to open file for reading

5.88.2.3 #define CONFIG\_FILE\_OK 0

Return status for success

# 5.88.3 Function Documentation

5.88.3.1 int config\_file\_read ( const char \* filename )

Reads a configuration file and stores the key-value pairs.

### **Parameters**

filename   The name of the configuration file	€.
---	----

### Returns

CONFIG\_FILE\_OK on success, CONFIG\_FILE\_NO\_FILE if the specified file could not be opened for reading, CONFIG\_FILE\_MALFORMED\_FILE if the configuration file was improperly formed.

5.88.3.2 void config\_free ( void )

Frees the resources used by this module.

The user should make copies of any required keys or values prior to calling this function. This function need not be called if config\_file\_read() returned an error.

5.88.3.3 bool config\_init (void)

Initializes configuration data.

### Returns

true on success, false on failure.

5.88.3.4 ds\_str config\_value\_get ( ds\_str key )

Returns the value associated with a key.

### **Parameters**

key	The specified key.

### **Returns**

A pointer to the associated value, or  $\mathtt{NULL}$  if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.88.3.5 ds\_str config\_value\_get\_cstr ( const char \* key )

Returns the value associated with a C-style string key.

### **Parameters**

1	The same of the different
kev	I he specified kev.
	The speciment has

# Returns

A pointer to the associated value, or  $\mathtt{NULL}$  if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.88.3.6 void config\_value\_set ( ds\_str key, ds\_str value )

Sets a key-value in the configuration structure.

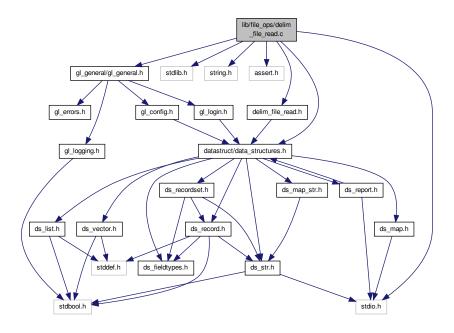

### **Parameters**

key	The key.
value	The value.

# 5.89 lib/file\_ops/delim\_file\_read.c File Reference

### 5.90.2 Function Documentation

5.90.2.1 ds\_recordset delim\_file\_read ( const char \* filename, const char delim )

Constructs a ds recordset from a delimited file.

### **Parameters**

filename	The name of the delimited file.
delim	The delimiting character.

### Returns

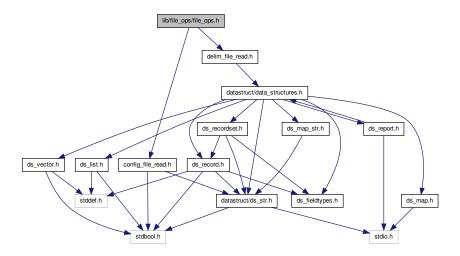

The ds\_recordset, or  $\mathtt{NULL}$  on failure.

# 5.91 lib/file\_ops/file\_ops.h File Reference

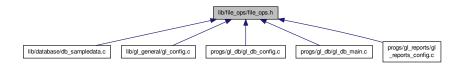

User interface to file operations functionality.

```
#include "config_file_read.h"
#include "delim_file_read.h"
```

Include dependency graph for file\_ops.h:

This graph shows which files directly or indirectly include this file:

# 5.91.1 Detailed Description

User interface to file operations functionality.

Author

Paul Griffiths

# Copyright

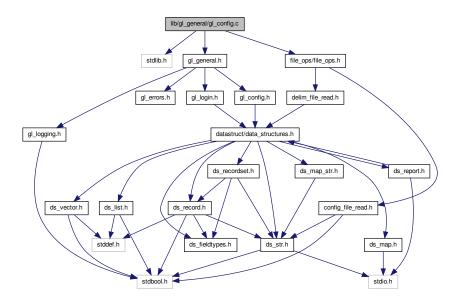

Copyright 2013 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.92 lib/gl\_general/gl\_config.c File Reference

Implementation of configuration functionality.

```
#include <stdlib.h>
#include "gl_general.h"
#include "file_ops/file_ops.h"
```

Include dependency graph for gl\_config.c:

# **Functions**

• struct params \* params\_init (void)

Initializes a parameters structure.

void params\_free (struct params \*params)

Frees a parameter structure.

• bool get\_configuration (struct params \*params, const char \*conf\_file)

Gets parameters from a configuration file.

# 5.92.1 Detailed Description

Implementation of configuration functionality.

Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.92.2 Function Documentation

5.92.2.1 bool get\_configuration ( struct params \* params, const char \* conf\_file )

Gets parameters from a configuration file.

# **Parameters**

params	A pointer to a parameters structure to populate.	
conf_file The filename of the configuration file.		

### Returns

true on success, false otherwise.

5.92.2.2 void params\_free ( struct params \* params )

Frees a parameter structure.

### **Parameters**

params | A pointer to the structure to free.

**5.92.2.3** struct params\* params\_init( void ) [read]

Initializes a parameters structure.

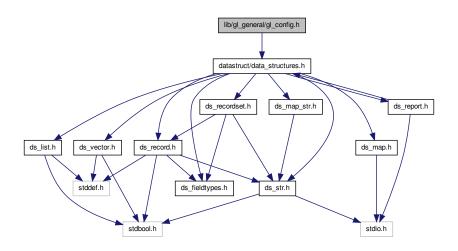

### Returns

An initialized parameters structure.

# 5.93 lib/gl\_general/gl\_config.h File Reference

Interface to configuration functionality.

#include "datastruct/data\_structures.h"
Include dependency graph for gl\_config.h:

This graph shows which files directly or indirectly include this file:

# **Data Structures**

· struct params

### **Functions**

struct params \* params\_init (void)

Initializes a parameters structure.

void params\_free (struct params \*params)

Frees a parameter structure.

• bool get\_configuration (struct params \*params, const char \*conf\_file)

Gets parameters from a configuration file.

# 5.93.1 Detailed Description

Interface to configuration functionality.

Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.93.2 Function Documentation

5.93.2.1 bool get\_configuration ( struct params \* params, const char \* conf\_file )

Gets parameters from a configuration file.

### **Parameters**

params	A pointer to a parameters structure to populate.	
conf_file	conf_file The filename of the configuration file.	

### **Returns**

true on success, false otherwise.

5.93.2.2 void params\_free ( struct params \* params )

Frees a parameter structure.

# **Parameters**

params   A pointer to the structure to free.
--

5.93.2.3 struct params\* params\_init( void ) [read]

Initializes a parameters structure.

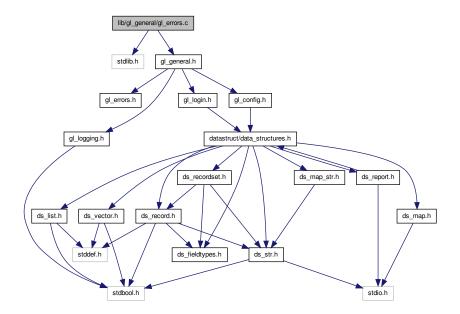

### Returns

An initialized parameters structure.

# 5.94 lib/gl\_general/gl\_errors.c File Reference

Implementation of error functionality.

```
#include <stdlib.h>
#include "gl_general.h"
Include dependency graph for gl_errors.c:
```

# **Functions**

void gl\_error\_quit (const char \*msg)

Logs an error message and quits program.

# 5.94.1 Detailed Description

Implementation of error functionality.

Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.94.2 Function Documentation

5.94.2.1 void gl\_error\_quit ( const char \* msg )

Logs an error message and quits program.

### **Parameters**

msg | The error message to log.

# 5.95 lib/gl\_general/gl\_errors.h File Reference

Interface to error functionality.

This graph shows which files directly or indirectly include this file:

# **Functions**

void gl\_error\_quit (const char \*msg)
 Logs an error message and quits program.

# 5.95.1 Detailed Description

Interface to error functionality.

Author

Paul Griffiths

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.97 lib/gl\_general/gl\_logging.c File Reference

Implementation of logging functionality.

```
#include <stdio.h>
#include <stdlib.h>
#include <stdbool.h>
#include <stdarg.h>
#include <string.h>
#include <errno.h>
#include "gl_logging.h"
```

Include dependency graph for gl\_logging.c:

### **Functions**

void gl\_set\_logging (const bool status)

Turns logging on or off.

void gl\_log\_msg (const char \*format,...)

Logs a message to the log file.

# 5.97.1 Detailed Description

Implementation of logging functionality. Implementation of logging functionality. Enables debugging and other system messages to be recorded to a log file.

# Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.97.2 Function Documentation

5.97.2.1 void gl\_log\_msg ( const char \* format, ... )

Logs a message to the log file.

Logs a message to the log file.

# **Parameters**

format	nat Format string, in same format as printf().	
Variable arguments as specified by format string.		

# 5.97.2.2 void gl\_set\_logging ( const bool status )

Turns logging on or off.

Turns logging on or off.

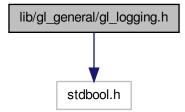

### **Parameters**

status | true to turn logging on, false to turn logging off.

# 5.98 lib/gl\_general/gl\_logging.h File Reference

Interface to logging functionality.

#include <stdbool.h>
Include dependency graph for gl\_logging.h:

This graph shows which files directly or indirectly include this file:

### **Functions**

• void gl\_set\_logging (const bool status)

Turns logging on or off.

• void gl\_log\_msg (const char \*format,...)

Logs a message to the log file.

# 5.98.1 Detailed Description

Interface to logging functionality. Interface to logging functionality. Enables debugging and other system messages to be recorded to a log file.

# 5.98.2 Function Documentation

5.98.2.1 void gl\_log\_msg ( const char \* format, ... )

Logs a message to the log file.

Logs a message to the log file.

# **Parameters**

format	format   Format string, in same format as printf().	
Variable arguments as specified by format string.		

# 5.98.2.2 void gl\_set\_logging ( const bool status )

Turns logging on or off.

Turns logging on or off.

### **Parameters**

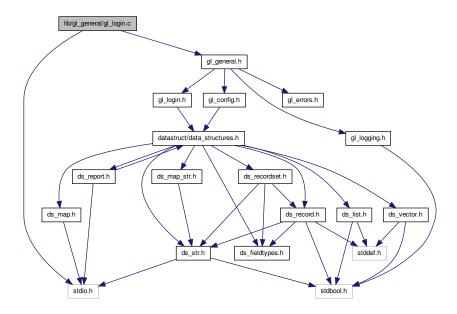

status   true to turn logging on, false to turn logging off.	
--	--

# 5.99 lib/gl\_general/gl\_login.c File Reference

Implementation of login functionality.

```
#include <stdio.h>
#include "gl_general.h"
```

Include dependency graph for gl\_login.c:

# **Functions**

• ds\_str login (void)

Gets a password from the user.

# 5.99.1 Detailed Description

Implementation of login functionality.

**Author** 

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

### 5.99.2 Function Documentation

5.99.2.1 ds\_str login ( void )

Gets a password from the user.

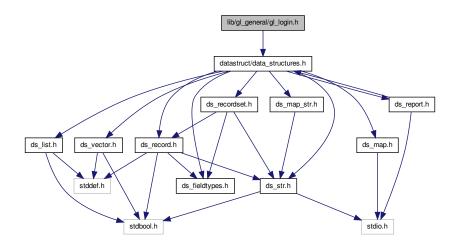

Returns

The password, or NULL on failure.

# 5.100 lib/gl\_general/gl\_login.h File Reference

Interface to login functionality.

#include "datastruct/data\_structures.h"
Include dependency graph for gl\_login.h:

This graph shows which files directly or indirectly include this file:

# **Functions**

• ds\_str login (void)

Gets a password from the user.

# 5.100.1 Detailed Description

Interface to login functionality.

**Author** 

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.100.2 Function Documentation

```
5.100.2.1 ds_str login ( void )
```

Gets a password from the user.

### **Returns**

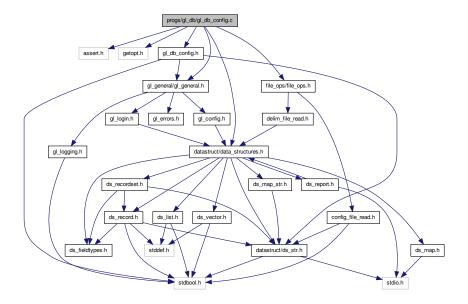

The password, or  $\mathtt{NULL}$  on failure.

# 5.101 progs/gl\_db/gl\_db\_config.c File Reference

Implementation of GL DB program configuration functionality.

```
#include <assert.h>
#include <getopt.h>
#include "gl_db_config.h"
#include "file_ops/file_ops.h"
#include "datastruct/data_structures.h"
#include "gl_general/gl_general.h"
```

Include dependency graph for gl\_db\_config.c:

### **Macros**

• #define \_XOPEN\_SOURCE 500

# **Functions**

bool get\_cmdline\_options (int argc, char \*\*argv, struct params \*params)
 Gets parameters from the command line.

# 5.101.1 Detailed Description

Implementation of GL DB program configuration functionality. Gets program configuration options from the command line and/or a configuration file.

# Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.101.2 Macro Definition Documentation

5.101.2.1 #define \_XOPEN\_SOURCE 500

UNIX feature test macro

# 5.101.3 Function Documentation

5.101.3.1 bool get\_cmdline\_options ( int argc, char \*\* argv, struct params \* params )

Gets parameters from the command line.

### **Parameters**

argc	argc as passed to main().	
argv	argv as passed to main().	
params A pointer to a parameters structure to populate.		

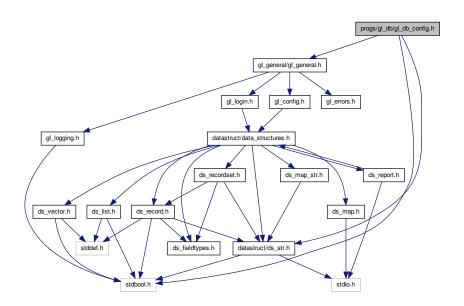

### Returns

false if an unrecognized command line option was specified, true otherwise.

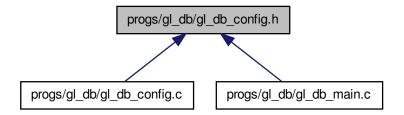

# 5.102 progs/gl\_db/gl\_db\_config.h File Reference

Interface to GL DB program configuration functionality.

```
#include <stdbool.h>
#include "datastruct/ds_str.h"
#include "gl_general/gl_general.h"
Include dependency graph for gl_db_config.h:
```

This graph shows which files directly or indirectly include this file:

### **Functions**

• bool get\_cmdline\_options (int argc, char \*\*argv, struct params \*params)

Gets parameters from the command line.

# 5.102.1 Detailed Description

Interface to GL DB program configuration functionality. Gets program configuration options from the command line and/or a configuration file.

### **Author**

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.102.2 Function Documentation

5.102.2.1 bool get\_cmdline\_options ( int argc, char \*\* argv, struct params \* params )

Gets parameters from the command line.

### **Parameters**

argc	argc as passed to main ().	
argv	argv as passed to main().	
params	params A pointer to a parameters structure to populate.	

#### Returns

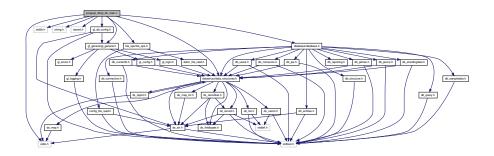

false if an unrecognized command line option was specified, true otherwise.

# 5.103 progs/gl\_db/gl\_db\_main.c File Reference

Main function for GL database program.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <assert.h>
#include "gl_general/gl_general.h"
#include "database/database.h"
#include "gl_db_config.h"
#include "datastruct/data_structures.h"
#include "file_ops/file_ops.h"
```

Include dependency graph for  $gl\_db\_main.c$ :

# **Functions**

• void print\_usage\_message (const char \*progname)

Prints a program usage message.

void print\_version\_message (const char \*progname)

Prints a program version message.

• void print\_help\_message (const char \*progname)

Prints a program help message.

• int main (int argc, char \*\*argv)

Main function.

# 5.103.1 Detailed Description

Main function for GL database program. Main function for GL database program.

### **Author**

Paul Griffiths

### Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

```
5.103.2 Function Documentation
```

```
5.103.2.1 int main (int argc, char ** argv)
```

Main function.

Main function.

Returns

Exit status.

5.103.2.2 void print\_help\_message ( const char \* progname )

Prints a program help message.

### **Parameters**

```
progname | The program name.
```

5.103.2.3 void print\_usage\_message ( const char \* progname )

Prints a program usage message.

### **Parameters**

```
progname The program name.
```

5.103.2.4 void print\_version\_message ( const char \* progname )

Prints a program version message.

### **Parameters**

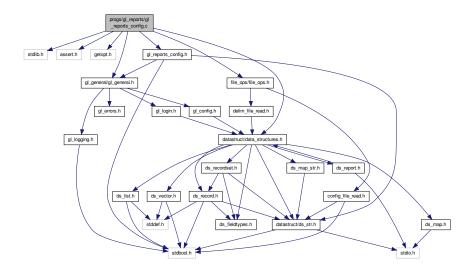

```
progname The program name.
```

# 5.104 progs/gl\_reports/gl\_reports\_config.c File Reference

Implementation of GL reports program configuration functionality.

```
#include <stdlib.h>
#include <assert.h>
#include <getopt.h>
#include "gl_reports_config.h"
#include "file_ops/file_ops.h"
#include "datastruct/data_structures.h"
#include "gl_general/gl_general.h"
```

Include dependency graph for gl\_reports\_config.c:

### **Macros**

• #define \_XOPEN\_SOURCE 500

# **Functions**

bool get\_cmdline\_options (int argc, char \*\*argv, struct params \*params)
 Gets parameters from the command line.

# 5.104.1 Detailed Description

Implementation of GL reports program configuration functionality. Gets program configuration options from the command line and/or a configuration file.

**Author** 

Paul Griffiths

# 5.104.2 Macro Definition Documentation

5.104.2.1 #define \_XOPEN\_SOURCE 500

UNIX feature test macro

# 5.104.3 Function Documentation

5.104.3.1 bool get\_cmdline\_options ( int argc, char \*\* argv, struct params \* params )

Gets parameters from the command line.

### **Parameters**

argc	argc as passed to main().
argv	argv as passed to main().
params	A pointer to a parameters structure to populate.

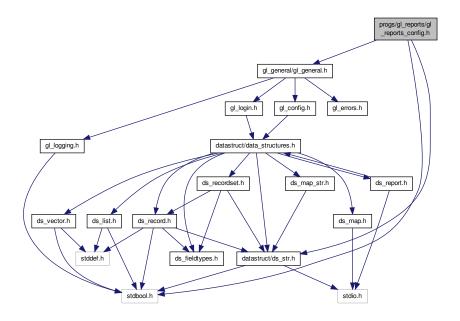

### Returns

false if an unrecognized command line option was specified, true otherwise.

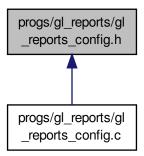

# 5.105 progs/gl\_reports/gl\_reports\_config.h File Reference

Interface to GL reports program configuration functionality.

```
#include <stdbool.h>
#include "datastruct/ds_str.h"
#include "gl_general/gl_general.h"
Include dependency graph for gl_reports_config.h:
```

This graph shows which files directly or indirectly include this file:

# **Functions**

• bool get\_cmdline\_options (int argc, char \*\*argv, struct params \*params)

Gets parameters from the command line.

# 5.105.1 Detailed Description

Interface to GL reports program configuration functionality. Gets program configuration options from the command line and/or a configuration file.

# Author

Paul Griffiths

# Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

# 5.105.2 Function Documentation

5.105.2.1 bool get\_cmdline\_options ( int argc, char \*\* argv, struct params \* params )

Gets parameters from the command line.

### **Parameters**

argc	argc as passed to main().	
argv	argv <b>as passed to main()</b> .	
params A pointer to a parameters structure to populate.		

### Returns

false if an unrecognized command line option was specified, true otherwise.
