Chapter 1

General Ledger.

General Ledger will be a fully-featured, multi-user, open-source general ledger system. The project is in the early stages of development.

2 General Ledger.

Chapter 2

Data Structure Index

2.1 Data Structures

Here are the data structures with brief descriptions:

ds_list							 														9
$ds_list_element$							 														10
ds_map							 														11
ds_map_str																					
ds_record																					
ds_recordset .																					
ds_str																					
ds_vector																					
kv_pair_node .							 														16
params							 											 			17

4 Data Structure Index

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

config.c	
Implementation of program configuration functionality	19
config.h	
Interface to program configuration functionality	20
main.c	
Main function for general_ledger	164
lib/database/database.h	
User interface to database functionality	22
lib/database/db_connection.h	
Interface to database connection functionality	23
lib/database/db_entities.c	
Implementation of entities functionality	24
lib/database/db_entities.h	
Interface to entities functionality	26
lib/database/db_internal.h	
Internal library interface to database functionality	27
lib/database/db_jelines.c	
Implementation of journal entries functionality	28
lib/database/db_jelines.h	
Interface to journal entry lines functionality	30
lib/database/db_jes.c	
Implementation of journal entries functionality	31
lib/database/db_jes.h	
Interface to journal entries functionality	33
lib/database/db_jesrcs.c	
Implementation of journal entry sources functionality	34
lib/database/db_jesrcs.h	
Interface to journal entry sources functionality	36
lib/database/db_nomaccts.c	
Implementation of nominal accounts functionality	37
lib/database/db_nomaccts.h	
Interface to nominal accounts functionality	39
lib/database/db_query.h	
Interface to database query functionality	41
lib/database/db_reporting.c	
Implementation of database reporting functionality	42
lib/database/db_reporting.h	
Interface to database reporting functionality	43

6 File Index

lib/database/db_sampledata.c	
Implementation of database sample data functionality	44
lib/database/db_sampledata.h Interface to database sample data functionality	45
lib/database/db_sql.h	
Interface to database specific SQL strings	46
lib/database/db_standingdata.c	
Implementation of standing data functionality	51
lib/database/db_standingdata.h	
Interface to journal entries functionality	52
lib/database/db_structure.c	
Implementation of database structure functionality	53
lib/database/db_structure.h Interface to database structure functionality	55
lib/database/db_users.c	55
Implementation of users functionality	56
lib/database/db users.h	50
Interface to users functionality	57
lib/database/dummy/db_dummy_create_entities_table_sql.c	•
Returns dummy SQL query to create entities table	59
lib/database/dummy/db_dummy_create_users_table_sql.c	
Returns dummy SQL query to create users table	59
lib/database/dummy/db_dummy_drop_entities_table_sql.c	
Returns dummy SQL query to drop entities table	60
lib/database/dummy/db_dummy_drop_users_table_sql.c	
Returns dummy SQL query to drop users table	60
lib/database/dummy/db_dummy_general.c	
Implementation of dummy database functionality	61
lib/database/dummy/db_dummy_list_entities_report_sql.c	
Returns dummy SQL query to create list entities report	63
lib/database/dummy/db_dummy_list_users_report_sql.c	C 4
Returns dummy SQL query to create list users report	64
Returns MYSQL SQL query to create entities table	64
lib/database/mysql/db_mysql_create_jelines_table_sql.c	04
Returns MYSQL SQL query to create journal entry lines table	65
lib/database/mysgl/db mysgl create jes table sql.c	
Returns MYSQL SQL query to create journal entries table	65
lib/database/mysql/db_mysql_create_jesrcs_table_sql.c	
Returns MYSQL SQL query to create JE sources table	66
lib/database/mysql/db_mysql_create_nomaccts_table_sql.c	
Returns MYSQL SQL query to create nominal accounts table	67
lib/database/mysql/db_mysql_create_standingdata_table_sql.c	
Returns MYSQL SQL query to create standing data table	67
lib/database/mysql/db_mysql_create_users_table_sql.c	
Returns MYSQL SQL query to create users table	68
lib/database/mysql/db_mysql_current_trial_balance_report_sql.c	00
Returns MYSQL SQL query to create current TB report	68
lib/database/mysql/db_mysql_drop_entities_table_sql.c Returns MYSQL SQL query to drop entities table	69
lib/database/mysql/db_mysql_drop_jelines_table_sql.c	09
Returns MYSQL SQL query to drop journal entry lines table	70
lib/database/mysql/db_mysql_drop_jes_table_sql.c	, 0
Returns MYSQL SQL query to drop entities table	70
lib/database/mysql/db_mysql_drop_jesrcs_table_sql.c	
Returns MYSQL SQL query to drop JE sources table	71
lib/database/mysql/db_mysql_drop_nomaccts_table_sql.c	
Returns MYSQL SQL query to drop nominal accounts table	71

3.1 File List 7

lib/database/mysql/db_mysql_drop_standingdata_table_sql.c	
Returns MYSQL SQL query to drop standing data table	72
lib/database/mysql_drop_users_table_sql.c	
Returns MYSQL SQL query to drop users table	73
lib/database/mysql/db_mysql_general.c	
Implementation of MYSQL database functionality	73
lib/database/mysql/db_mysql_list_entities_report_sql.c	75
Returns MYSQL SQL query to create list entities report	75
Returns MYSQL SQL query to create JE lines report	76
lib/database/mysql/db_mysql_list_jes_report_sql.c	. •
Returns MYSQL SQL query to create journal entries report	76
lib/database/mysql_list_jesrcs_report_sql.c	
Returns MYSQL SQL query to create JE sources report	77
lib/database/mysql/db_mysql_list_nomaccts_report_sql.c	
Returns MYSQL SQL query to create list nominal accounts report	78
lib/database/mysql/db_mysql_list_users_report_sql.c	70
Returns MYSQL SQL query to create list users report	78
Returns MYSQL SQL query to create show standing data report	79
lib/datastruct/data structures.h	, 0
Interface to data structures	80
lib/datastruct/ds_fieldtypes.h	
Record field types enumeration	80
lib/datastruct/ds_list.c	
Implementation of generic doubly-linked list data structure	81
lib/datastruct/ds_list.h	00
Interface to generic doubly-linked list data structure	86
Implementation of string-string hash map data structure	90
lib/datastruct/ds_map.h	30

Chapter 4

Data Structure Documentation

4.1 ds_list Struct Reference

Collaboration diagram for ds_list:

Data Fields

- size_t length
- · bool free_on_delete
- struct ds_list_element * head
- struct ds_list_element * tail
- struct ds_list_element * current
- void(* data_destructor)(void *)

4.1.1 Detailed Description

List data structure

4.1.2 Field Documentation

4.1.2.1 struct ds_list_element* ds_list::current

Pointer to current element

4.1.2.2 void(* ds_list::data_destructor)(void *)

Data destructor function

4.1.2.3 bool ds_list::free_on_delete

'Free on delete' flag

4.1.2.4 struct ds_list_element* ds_list::head

Pointer to head element

4.1.2.5 size_t ds_list::length

Length of list

4.1.2.6 struct ds_list_element* ds_list::tail

Pointer to tail element

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_list.c

4.2 ds_list_element Struct Reference

Collaboration diagram for ds_list_element:

Data Fields

- void * data
- struct ds_list_element * previous
- struct ds_list_element * next

4.2.1 Detailed Description

List element data structure

4.2.2 Field Documentation

4.2.2.1 void* ds_list_element::data

Pointer to data

4.2.2.2 struct ds_list_element* ds_list_element::next

Pointer to next element

4.2.2.3 struct ds_list_element* ds_list_element::previous

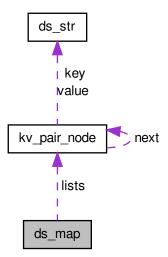

Pointer to previous element

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_list.c

4.3 ds_map Struct Reference

Collaboration diagram for ds_map:

Data Fields

- struct kv_pair_node ** lists
- size_t hash_size

4.3.1 Detailed Description

Structure to hold a hash map

4.3.2 Field Documentation

4.3.2.1 size_t ds_map::hash_size

Size of array of lists

4.3.2.2 struct kv_pair_node** ds_map::lists

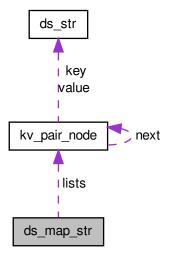

Pointer to array of lists

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_map.c

4.4 ds_map_str Struct Reference

Collaboration diagram for ds_map_str:

Data Fields

- struct kv_pair_node ** lists
- size_t hash_size

4.4.1 Detailed Description

Structure to hold a hash map

4.4.2 Field Documentation

4.4.2.1 size_t ds_map_str::hash_size

Size of array of lists

4.4.2.2 struct kv_pair_node** ds_map_str::lists

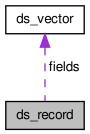

Pointer to array of lists

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_map_str.c

4.5 ds_record Struct Reference

Collaboration diagram for ds_record:

Data Fields

• struct ds_vector * fields

4.5.1 Detailed Description

Vector data structure

4.5.2 Field Documentation

4.5.2.1 struct ds_vector* ds_record::fields

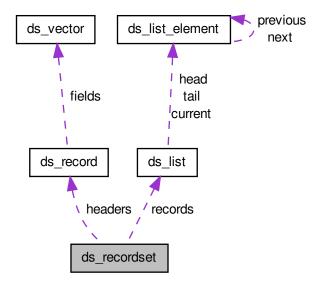

Vector of fields

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_record.c

4.6 ds_recordset Struct Reference

Collaboration diagram for ds_recordset:

Data Fields

- size_t num_fields
- size_t * field_lengths
- ds_record headers
- ds list records
- enum ds_field_types * types

4.6.1 Detailed Description

Result set structure

4.6.2 Field Documentation

4.6.2.1 size_t* ds_recordset::field_lengths

Lengths of the longest fields

4.6.2.2 ds_record ds_recordset::headers

A list of field headers

4.6.2.3 size_t ds_recordset::num_fields

The number of fields in a record

4.6.2.4 ds_list ds_recordset::records

A list of records

4.6.2.5 enum ds_field_types* ds_recordset::types

Types of records

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_recordset.c

4.7 ds_str Struct Reference

Data Fields

- char * data
- · size t length
- size_t capacity

4.7.1 Detailed Description

Structure to contain string

4.7.2 Field Documentation

4.7.2.1 size_t ds_str::capacity

The size of the data buffer

4.7.2.2 char* ds_str::data

The data in C-style string format

4.7.2.3 size_t ds_str::length

The length of the string

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_str.c

4.8 ds_vector Struct Reference

Data Fields

- size_t size
- size_t current
- · bool free on delete
- void ** data
- void(* data_destructor)(void *)

4.8.1 Detailed Description

Vector data structure

4.8.2 Field Documentation

4.8.2.1 size_t ds_vector::current

Current position

4.8.2.2 void** ds_vector::data

Data array

4.8.2.3 void(* ds_vector::data_destructor)(void *)

Data destructor function

4.8.2.4 bool ds_vector::free_on_delete

'Free on delete' flag

4.8.2.5 size_t ds_vector::size

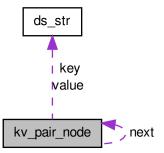

Size of vector

The documentation for this struct was generated from the following file:

• lib/datastruct/ds_vector.c

4.9 kv_pair_node Struct Reference

Collaboration diagram for kv_pair_node:

Data Fields

- char * key
- char * value
- struct kv_pair_node * next
- ds_str key
- ds_str value

4.9.1 Detailed Description

Structure to hold a key-value pair node

4.9.2 Field Documentation

4.9.2.1 ds_str kv_pair_node::key

A pointer to the key

4.9.2.2 char* kv_pair_node::key

A pointer to the key

4.9.2.3 struct kv_pair_node * kv_pair_node::next

A pointer to the next node

4.9.2.4 ds_str kv_pair_node::value

A pointer to the value

4.9.2.5 char* kv_pair_node::value

A pointer to the value

The documentation for this struct was generated from the following files:

- lib/datastruct/ds_map.c
- lib/datastruct/ds_map_str.c

4.10 params Struct Reference

#include <gl_config.h>

Collaboration diagram for params:

Data Fields

- ds_str hostname
- ds str database
- ds_str username
- · ds_str password

4.10.1 Detailed Description

Structure to hold database login parameters

4.10.2 Field Documentation

4.10.2.1 ds_str params::database

Database name

4.10.2.2 ds_str params::hostname

Database hostname

4.10.2.3 ds_str params::password

Password for database access

4.10.2.4 ds_str params::username

Username for database access

The documentation for this struct was generated from the following file:

• lib/gl_general/gl_config.h

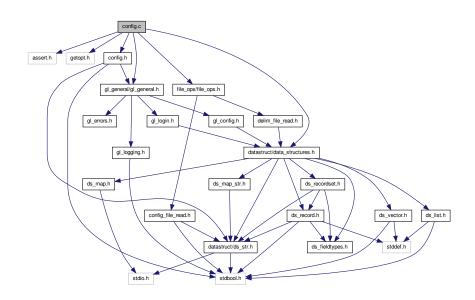

Chapter 5

File Documentation

5.1 config.c File Reference

Implementation of program configuration functionality.

```
#include <assert.h>
#include <getopt.h>
#include "config.h"
#include "file_ops/file_ops.h"
#include "datastruct/data_structures.h"
#include "gl_general/gl_general.h"
Include dependency graph for config.c:
```

Macros

• #define _XOPEN_SOURCE 500

Functions

• bool get_cmdline_options (int argc, char **argv, struct params *params)

Gets parameters from the command line.

5.1.1 Detailed Description

Implementation of program configuration functionality. Gets program configuration options from the command line and/or a configuration file.

Author

Paul Griffiths

Copyright

```
Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/
```

5.1.2 Macro Definition Documentation

5.1.2.1 #define _XOPEN_SOURCE 500

UNIX feature test macro

5.1.3 Function Documentation

5.1.3.1 bool get_cmdline_options (int argc, char ** argv, struct params * params)

Gets parameters from the command line.

Parameters

argc	argc as passed to main().
argv	argv as passed to main().
params	A pointer to a parameters structure to populate.

Returns

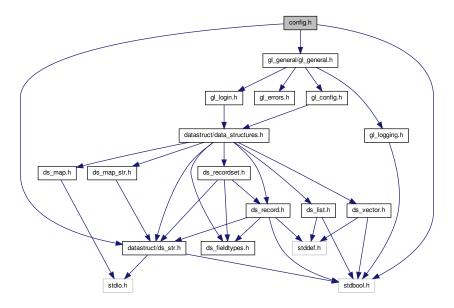

false if an unrecognized command line option was specified, true otherwise.

5.2 config.h File Reference

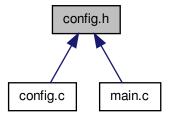

Interface to program configuration functionality.

```
#include <stdbool.h>
#include "datastruct/ds_str.h"
#include "gl_general/gl_general.h"
```

Include dependency graph for config.h:

This graph shows which files directly or indirectly include this file:

Functions

• bool get_cmdline_options (int argc, char **argv, struct params *params)

Gets parameters from the command line.

5.2.1 Detailed Description

Interface to program configuration functionality. Gets program configuration options from the command line and/or a configuration file.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.2.2 Function Documentation

5.2.2.1 bool get_cmdline_options (int argc, char ** argv, struct params * params)

Gets parameters from the command line.

Parameters

argc	argc as passed to main().
argv	argv as passed to main().
params	A pointer to a parameters structure to populate.

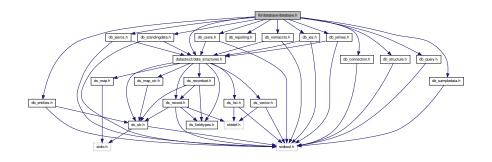

Returns

false if an unrecognized command line option was specified, true otherwise.

5.3 lib/database/database.h File Reference

User interface to database functionality.

```
#include "datastruct/data_structures.h"
#include "db_connection.h"
#include "db_structure.h"
#include "db_query.h"
#include "db_sampledata.h"
#include "db_reporting.h"
#include "db_users.h"
#include "db_entities.h"
#include "db_pentities.h"
#include "db_jes.h"
#include "db_jes.h"
#include "db_jesrcs.h"
#include "db_jesrcs.h"
#include "db_standingdata.h"
Include dependency graph for database.h:
```

This graph shows which files directly or indirectly include this file:

5.3.1 Detailed Description

User interface to database functionality.

Author

Paul Griffiths

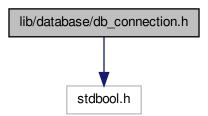

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

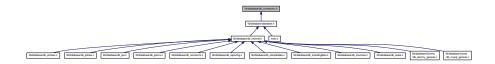

5.4 lib/database/db_connection.h File Reference

Interface to database connection functionality.

#include <stdbool.h>
Include dependency graph for db_connection.h:

This graph shows which files directly or indirectly include this file:

Functions

bool db_connect (const char *host, const char *database, const char *username, const char *password)

Connects to a database.

void db_close (void)

Disconnects from a database.

5.4.1 Detailed Description

Interface to database connection functionality. Function implementations are provided by the individual database components.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.4.2 Function Documentation

5.4.2.1 bool db_connect (const char * host, const char * database, const char * username, const char * password)

Connects to a database.

Parameters

host	The hostname.
database	The database name.
username	The username with which to connect.
password	The password for the specified user.

Returns

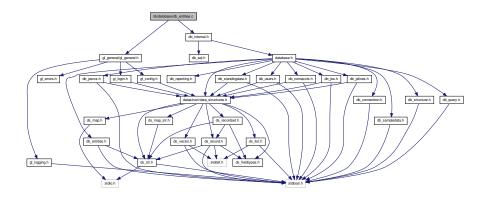

true if the connection was successfully made, false otherwise.

5.5 lib/database/db_entities.c File Reference

Implementation of entities functionality.

```
#include "db_internal.h"
#include "gl_general/gl_general.h"
```

Include dependency graph for db_entities.c:

Functions

- bool db_create_entities_table (void)
 - Creates the entities table in the database.
- bool db_drop_entities_table (void)

Drops the entities table in the database.

ds_str db_list_entities_report (void)

Creates a report listing all entities.

5.5.1 Detailed Description

Implementation of entities functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.5.2 Function Documentation

5.5.2.1 bool db_create_entities_table (void)

Creates the entities table in the database.

Returns

true on success, false on failure.

5.5.2.2 bool db_drop_entities_table (void)

Drops the entities table in the database.

Returns

true on success, false on failure.

5.5.2.3 ds_str db_list_entities_report (void)

Creates a report listing all entities.

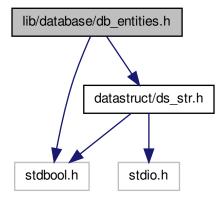

Returns

A ds_str containing the report.

5.6 lib/database/db_entities.h File Reference

Interface to entities functionality.

```
#include <stdbool.h>
#include "datastruct/ds_str.h"
Include dependency graph for db_entities.h:
```

This graph shows which files directly or indirectly include this file:

Functions

bool db_create_entities_table (void)

Creates the entities table in the database.

bool db_drop_entities_table (void)

Drops the entities table in the database.

• ds_str db_list_entities_report (void)

Creates a report listing all entities.

5.6.1 Detailed Description

Interface to entities functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.6.2 Function Documentation

5.6.2.1 bool db_create_entities_table (void)

Creates the entities table in the database.

Returns

true on success, false on failure.

5.6.2.2 bool db_drop_entities_table (void)

Drops the entities table in the database.

Returns

true on success, false on failure.

5.6.2.3 ds_str db_list_entities_report (void)

Creates a report listing all entities.

Returns

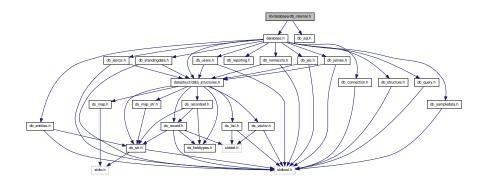

A ds_str containing the report.

5.7 lib/database/db_internal.h File Reference

Internal library interface to database functionality.

```
#include "database.h"
#include "db_sql.h"
```

Include dependency graph for db_internal.h:

This graph shows which files directly or indirectly include this file:

5.7.1 Detailed Description

Internal library interface to database functionality. The library interface includes the individual SQL functions which should be encapsulated from the user.

Author

Paul Griffiths

Copyright

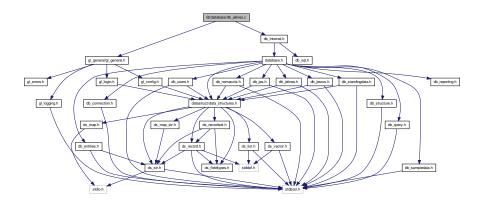

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.8 lib/database/db_jelines.c File Reference

Implementation of journal entries functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
```

Include dependency graph for db_jelines.c:

Functions

- bool db_create_jelines_table (void)
 - Creates the journal entry lines table in the database.
- bool db_drop_jelines_table (void)
 - Drops the journal entry lines table from the database.
- ds_str db_list_jelines_report (void)
 - Creates a report listing all journal entry lines..

5.8.1 Detailed Description

Implementation of journal entries functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.8.2 Function Documentation

5.8.2.1 bool db_create_jelines_table (void)

Creates the journal entry lines table in the database.

Returns

true on success, false on failure.

5.8.2.2 bool db_drop_jelines_table (void)

Drops the journal entry lines table from the database.

Returns

true on success, false on failure.

5.8.2.3 ds_str db_list_jelines_report (void)

Creates a report listing all journal entry lines..

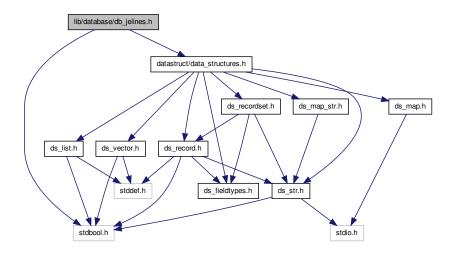

Returns

A ds_str containing the report.

5.9 lib/database/db_jelines.h File Reference

Interface to journal entry lines functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_jelines.h:
```

This graph shows which files directly or indirectly include this file:

Functions

• bool db_create_jelines_table (void)

Creates the journal entry lines table in the database.

bool db_drop_jelines_table (void)

Drops the journal entry lines table from the database.

• ds_str db_list_jelines_report (void)

Creates a report listing all journal entry lines..

5.9.1 Detailed Description

Interface to journal entry lines functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.9.2 Function Documentation

5.9.2.1 bool db_create_jelines_table (void)

Creates the journal entry lines table in the database.

Returns

true on success, false on failure.

5.9.2.2 bool db_drop_jelines_table (void)

Drops the journal entry lines table from the database.

Returns

true on success, false on failure.

5.9.2.3 ds_str db_list_jelines_report (void)

Creates a report listing all journal entry lines..

Returns

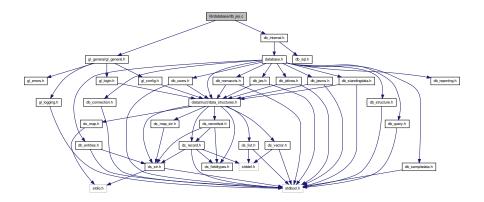

A ds_str containing the report.

5.10 lib/database/db_jes.c File Reference

Implementation of journal entries functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
```

Include dependency graph for db_jes.c:

Functions

• bool db_create_jes_table (void)

Creates the journal entries table in the database.

• bool db_drop_jes_table (void)

Drops the jes table from the database.

ds_str db_list_jes_report (void)

Creates a report listing all journal entries.

5.10.1 Detailed Description

Implementation of journal entries functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.10.2 Function Documentation

5.10.2.1 bool db_create_jes_table (void)

Creates the journal entries table in the database.

Returns

true on success, false on failure.

5.10.2.2 bool db_drop_jes_table (void)

Drops the jes table from the database.

Returns

true on success, false on failure.

5.10.2.3 ds_str db_list_jes_report (void)

Creates a report listing all journal entries.

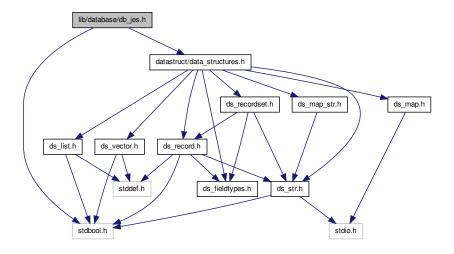

Returns

A ds_str containing the report.

5.11 lib/database/db_jes.h File Reference

Interface to journal entries functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_jes.h:
```

This graph shows which files directly or indirectly include this file:

Functions

• bool db_create_jes_table (void)

Creates the journal entries table in the database.

• bool db_drop_jes_table (void)

Drops the jes table from the database.

• ds_str db_list_jes_report (void)

Creates a report listing all journal entries.

5.11.1 Detailed Description

Interface to journal entries functionality.

Author

Paul Griffiths

Copyright

```
Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/
```

5.11.2 Function Documentation

```
5.11.2.1 bool db_create_jes_table ( void )
```

Creates the journal entries table in the database.

Returns

```
true on success, false on failure.
```

```
5.11.2.2 bool db_drop_jes_table ( void )
```

Drops the jes table from the database.

Returns

true on success, false on failure.

```
5.11.2.3 ds_str db_list_jes_report ( void )
```

Creates a report listing all journal entries.

Returns

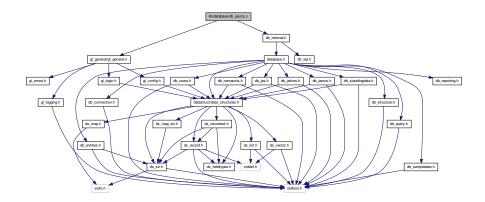

A ds_str containing the report.

5.12 lib/database/db_jesrcs.c File Reference

Implementation of journal entry sources functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
```

Include dependency graph for db_jesrcs.c:

Functions

- bool db_create_jesrcs_table (void)
 - Creates the JE sources table in the database.
- bool db_drop_jesrcs_table (void)
 - Drops the jesrcs table from the database.
- ds_str db_list_jesrcs_report (void)

Creates a report listing all journal entry sources.

5.12.1 Detailed Description

Implementation of journal entry sources functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.12.2 Function Documentation

5.12.2.1 bool db_create_jesrcs_table (void)

Creates the JE sources table in the database.

Returns

true on success, false on failure.

5.12.2.2 bool db_drop_jesrcs_table (void)

Drops the jesrcs table from the database.

Returns

true on success, false on failure.

5.12.2.3 ds_str db_list_jesrcs_report (void)

Creates a report listing all journal entry sources.

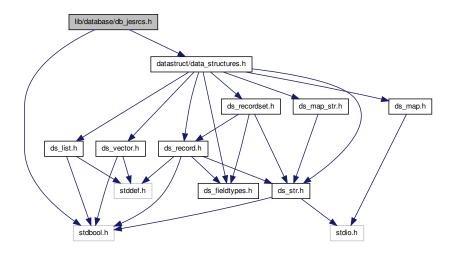

Returns

A ds_str containing the report.

5.13 lib/database/db_jesrcs.h File Reference

Interface to journal entry sources functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_jesrcs.h:
```

This graph shows which files directly or indirectly include this file:

Functions

• bool db_create_jesrcs_table (void)

Creates the JE sources table in the database.

bool db_drop_jesrcs_table (void)

Drops the jesrcs table from the database.

• ds_str db_list_jesrcs_report (void)

Creates a report listing all journal entry sources.

5.13.1 Detailed Description

Interface to journal entry sources functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.13.2 Function Documentation

```
5.13.2.1 bool db_create_jesrcs_table ( void )
```

Creates the JE sources table in the database.

Returns

true on success, false on failure.

```
5.13.2.2 bool db_drop_jesrcs_table ( void )
```

Drops the jesrcs table from the database.

Returns

true on success, false on failure.

```
5.13.2.3 ds_str db_list_jesrcs_report ( void )
```

Creates a report listing all journal entry sources.

Returns

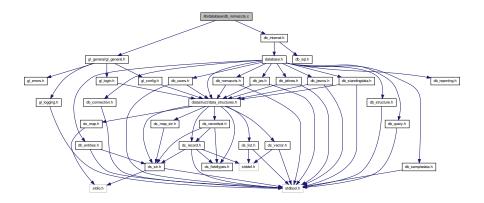

A ds_str containing the report.

5.14 lib/database/db_nomaccts.c File Reference

Implementation of nominal accounts functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
```

Include dependency graph for db_nomaccts.c:

Functions

- bool db_create_nomaccts_table (void)
 - Creates the nominal accounts table in the database.
- bool db_drop_nomaccts_table (void)
 - Drops the nomaccts table from the database.
- ds_str db_list_nomaccts_report (void)

Creates a report listing all nominal accounts.

5.14.1 Detailed Description

Implementation of nominal accounts functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.14.2 Function Documentation

5.14.2.1 bool db_create_nomaccts_table (void)

Creates the nominal accounts table in the database.

Returns

true on success, false on failure.

5.14.2.2 bool db_drop_nomaccts_table (void)

Drops the nomaccts table from the database.

Returns

true on success, false on failure.

5.14.2.3 ds_str db_list_nomaccts_report (void)

Creates a report listing all nominal accounts.

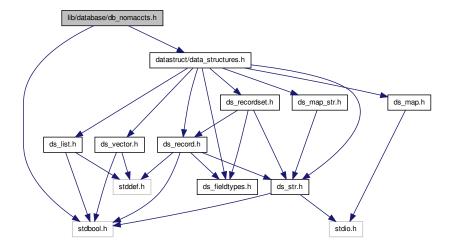

Returns

A ds_str containing the report.

5.15 lib/database/db_nomaccts.h File Reference

Interface to nominal accounts functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_nomaccts.h:
```

This graph shows which files directly or indirectly include this file:

Functions

• bool db_create_nomaccts_table (void)

Creates the nominal accounts table in the database.

bool db_drop_nomaccts_table (void)

Drops the nomaccts table from the database.

ds_str db_list_nomaccts_report (void)

Creates a report listing all nominal accounts.

5.15.1 Detailed Description

Interface to nominal accounts functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.15.2 Function Documentation

5.15.2.1 bool db_create_nomaccts_table (void)

Creates the nominal accounts table in the database.

Returns

true on success, false on failure.

5.15.2.2 bool db_drop_nomaccts_table (void)

Drops the nomaccts table from the database.

Returns

true on success, false on failure.

5.15.2.3 ds_str db_list_nomaccts_report (void)

Creates a report listing all nominal accounts.

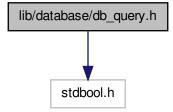

Returns

A ds_str containing the report.

5.16 lib/database/db_query.h File Reference

Interface to database query functionality.

#include <stdbool.h>
Include dependency graph for db_query.h:

This graph shows which files directly or indirectly include this file:

Functions

bool db_execute_query (ds_str query)
 Executes an SQL query on the database.

5.16.1 Detailed Description

Interface to database query functionality. Function implementations are provided by the individual database components.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.16.2 Function Documentation

5.16.2.1 bool db_execute_query (ds_str query)

Executes an SQL query on the database.

Parameters

query The query to execute.

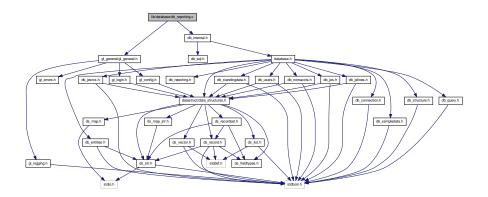

Returns

true if the query was successfully executed, false otherwise.

5.17 lib/database/db_reporting.c File Reference

Implementation of database reporting functionality.

```
#include "db_internal.h"
#include "gl_general/gl_general.h"
Include dependency graph for db_reporting.c:
```

Functions

• ds_str db_create_report_from_query (ds_str query)

Creates a text report from a query.

ds_str db_current_trial_balance_report (ds_str entity)

Runs the current trial balance report.

5.17.1 Detailed Description

Implementation of database reporting functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.17.2 Function Documentation

5.17.2.1 ds_str db_create_report_from_query (ds_str query)

Creates a text report from a query.

Parameters

query The SELECT query to run.

Returns

A ds_str containing the report, or \mathtt{NULL} on failure.

5.17.2.2 ds str db_current_trial_balance_report (ds str entity)

Runs the current trial balance report.

Returns

The report.

5.18 lib/database/db_reporting.h File Reference

Interface to database reporting functionality.

This graph shows which files directly or indirectly include this file:

Functions

· ds_str db_create_report_from_query (ds_str query)

Creates a text report from a query.

• ds_recordset db_create_recordset_from_query (ds_str query)

Creates a ds_recordset from a query.

• ds_str db_current_trial_balance_report (ds_str entity)

Runs the current trial balance report.

5.18.1 Detailed Description

Interface to database reporting functionality. Function implementations may be provided by the individual database components.

5.18.2 Function Documentation

5.18.2.1 ds_recordset db_create_recordset_from_query (ds_str query)

Creates a ds_recordset from a query.

Parameters

```
query The SELECT query to run.
```

Returns

A ds_recordset containing the query result, or \mathtt{NULL} on failure.

5.18.2.2 ds_str db_create_report_from_query (ds_str query)

Creates a text report from a query.

Parameters

Returns

A ds_str containing the report, or NULL on failure.

5.18.2.3 ds_str db_current_trial_balance_report (ds_str entity)

Runs the current trial balance report.

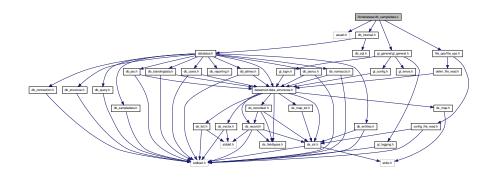

Returns

The report.

5.19 lib/database/db_sampledata.c File Reference

Implementation of database sample data functionality.

```
#include <assert.h>
#include "db_internal.h"
#include "file_ops/file_ops.h"
#include "gl_general/gl_general.h"
Include dependency graph for db_sampledata.c:
```

Functions

bool db_load_sample_data (void)

Loads sample data into the database.

5.19.1 Detailed Description

Implementation of database sample data functionality.

Author

Paul Griffiths

Copyright

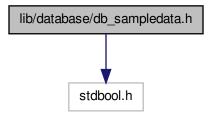

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.20 lib/database/db_sampledata.h File Reference

Interface to database sample data functionality.

#include <stdbool.h>

Include dependency graph for db_sampledata.h:

This graph shows which files directly or indirectly include this file:

Functions

bool db_load_sample_data (void)

Loads sample data into the database.

5.20.1 Detailed Description

Interface to database sample data functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.21 lib/database/db_sql.h File Reference

Interface to database specific SQL strings.

This graph shows which files directly or indirectly include this file:

Functions

• const char * db create users table sql (void)

Returns the SQL query to create the users table.

const char * db_drop_users_table_sql (void)

Returns the SQL query to drop the users table.

const char * db_list_users_report_sql (void)

Returns the SQL query to run the "list users" report.

const char * db_create_entities_table_sql (void)

Returns the SQL query to create the entities table.

const char * db_drop_entities_table_sql (void)

Returns the SQL query to drop the entities table.

const char * db_list_entities_report_sql (void)

Returns the SQL query to run the "list entities" report.

const char * db_create_jes_table_sql (void)

Returns the SQL query to create the journal entries table.

const char * db_drop_jes_table_sql (void)

Returns the SQL query to drop the journal entries table.

const char * db_list_jes_report_sql (void)

Returns the SQL query to run the "list journal entries" report.

const char * db_create_nomaccts_table_sql (void)

Returns the SQL query to create the nominal accounts table.

const char * db_drop_nomaccts_table_sql (void)

Returns the SQL query to drop the nominal accounts table.

const char * db_list_nomaccts_report_sql (void)

Returns the SQL query to run the "list nominal accounts" report.

const char * db_create_jelines_table_sql (void)

Returns the SQL query to create the JE lines table.

```
    const char * db_drop_jelines_table_sql (void)
```

Returns the SQL query to drop the JE lines table.

const char * db_list_jelines_report_sql (void)

Returns the SQL query to run the "list JE lines" report.

const char * db_current_trial_balance_report_sql (void)

Returns the SQL query to run the "current TB" report.

const char * db_create_jesrcs_table_sql (void)

Returns the SQL query to create the JE sources table.

const char * db_drop_jesrcs_table_sql (void)

Returns the SQL query to drop the JE sources table.

const char * db_list_jesrcs_report_sql (void)

Returns the SQL query to run the "list JE sources" report.

const char * db_create_standingdata_table_sql (void)

Returns the SQL query to create the standing data table.

const char * db_drop_standingdata_table_sql (void)

Returns the SQL query to drop the standing data table.

const char * db_show_standingdata_report_sql (void)

Returns the SQL query to run the "show standing data" report.

5.21.1 Detailed Description

Interface to database specific SQL strings. Function implementations are provided by the individual database components.

5.21.2 Function Documentation

5.21.2.1 const char* db_create_entities_table_sql (void)

Returns the SQL query to create the entities table.

Returns

The SQL query.

5.21.2.2 const char* db_create_jelines_table_sql (void)

Returns the SQL query to create the JE lines table.

Returns

The SQL query.

```
5.21.2.3 const char* db_create_jes_table_sql ( void )
Returns the SQL query to create the journal entries table.
Returns
    The SQL query.
5.21.2.4 const char* db_create_jesrcs_table_sql ( void )
Returns the SQL query to create the JE sources table.
Returns
    The SQL query.
5.21.2.5 const char* db_create_nomaccts_table_sql ( void )
Returns the SQL query to create the nominal accounts table.
Returns
    The SQL query.
5.21.2.6 const char* db_create_standingdata_table_sql ( void )
Returns the SQL query to create the standing data table.
Returns
    The SQL query.
5.21.2.7 const char* db_create_users_table_sql ( void )
Returns the SQL query to create the users table.
Returns
    The SQL query.
5.21.2.8 const char* db_current_trial_balance_report_sql ( void )
Returns the SQL query to run the "current TB" report.
Returns
    The SQL query.
5.21.2.9 const char* db_drop_entities_table_sql ( void )
Returns the SQL query to drop the entities table.
Returns
    The SQL query.
```

```
5.21.2.10 const char* db_drop_jelines_table_sql ( void )
Returns the SQL query to drop the JE lines table.
Returns
    The SQL query.
5.21.2.11 const char* db_drop_jes_table_sql ( void )
Returns the SQL query to drop the journal entries table.
Returns
    The SQL query.
5.21.2.12 const char* db_drop_jesrcs_table_sql ( void )
Returns the SQL query to drop the JE sources table.
Returns
    The SQL query.
5.21.2.13 const char* db_drop_nomaccts_table_sql ( void )
Returns the SQL query to drop the nominal accounts table.
Returns
    The SQL query.
5.21.2.14 const char* db_drop_standingdata_table_sql ( void )
Returns the SQL query to drop the standing data table.
Returns
    The SQL query.
5.21.2.15 const char* db_drop_users_table_sql ( void )
Returns the SQL query to drop the users table.
Returns
    The SQL query.
5.21.2.16 const char* db_list_entities_report_sql ( void )
Returns the SQL query to run the "list entities" report.
Returns
    The SQL query.
```

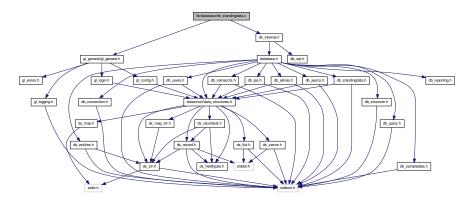

```
5.21.2.17 const char* db_list_jelines_report_sql ( void )
Returns the SQL query to run the "list JE lines" report.
Returns
    The SQL query.
5.21.2.18 const char* db_list_jes_report_sql ( void )
Returns the SQL query to run the "list journal entries" report.
Returns
    The SQL query.
5.21.2.19 const char* db_list_jesrcs_report_sql ( void )
Returns the SQL query to run the "list JE sources" report.
Returns
    The SQL query.
5.21.2.20 const char* db_list_nomaccts_report_sql ( void )
Returns the SQL query to run the "list nominal accounts" report.
Returns
    The SQL query.
5.21.2.21 const char* db_list_users_report_sql ( void )
Returns the SQL query to run the "list users" report.
Returns
    The SQL query.
5.21.2.22 const char* db_show_standingdata_report_sql ( void )
Returns the SQL query to run the "show standing data" report.
Returns
    The SQL query.
```

5.22 lib/database/db_standingdata.c File Reference

Implementation of standing data functionality.

```
#include "gl_general/gl_general.h"
#include "db_internal.h"
```

Include dependency graph for db_standingdata.c:

Functions

• bool db_create_standingdata_table (void)

Creates the standing data table in the database.

bool db_drop_standingdata_table (void)

Drops the standingdata table from the database.

ds_str db_show_standingdata_report (void)

Creates a report showing standing data.

5.22.1 Detailed Description

Implementation of standing data functionality.

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.22.2 Function Documentation

5.22.2.1 bool db_create_standingdata_table (void)

Creates the standing data table in the database.

Returns

true on success, false on failure.

5.22.2.2 bool db_drop_standingdata_table (void)

Drops the standingdata table from the database.

Returns

true on success, false on failure.

5.22.2.3 ds_str db_show_standingdata_report (void)

Creates a report showing standing data.

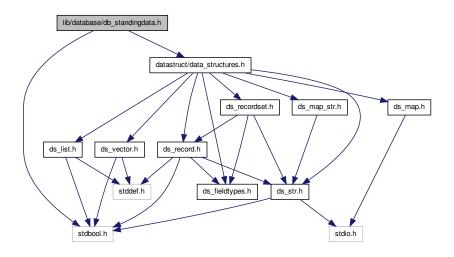

Returns

A ds_str containing the report.

5.23 lib/database/db_standingdata.h File Reference

Interface to journal entries functionality.

```
#include <stdbool.h>
#include "datastruct/data_structures.h"
Include dependency graph for db_standingdata.h:
```

This graph shows which files directly or indirectly include this file:

Functions

• bool db_create_standingdata_table (void)

Creates the standing data table in the database.

bool db_drop_standingdata_table (void)

Drops the standingdata table from the database.

ds_str db_show_standingdata_report (void)

Creates a report showing standing data.

5.23.1 Detailed Description

Interface to journal entries functionality.

Author

Paul Griffiths

5.23.2 Function Documentation

5.23.2.1 bool db_create_standingdata_table (void)

Creates the standing data table in the database.

Returns

true on success, false on failure.

5.23.2.2 bool db_drop_standingdata_table (void)

Drops the standingdata table from the database.

Returns

true on success, false on failure.

5.23.2.3 ds_str db_show_standingdata_report (void)

Creates a report showing standing data.

Returns

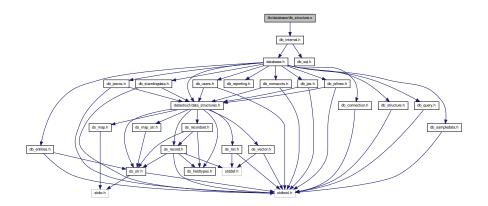

A ds_str containing the report.

5.24 lib/database/db_structure.c File Reference

Implementation of database structure functionality.

#include "db_internal.h"

Include dependency graph for db_structure.c:

Functions

- bool db_create_database_structure (void)
 - Creates an empty database structure.
- bool db_delete_database_structure (void)

Deletes the database structure.

5.24.1 Detailed Description

Implementation of database structure functionality.

5.31.2 Function Documentation

```
5.31.2.1 const char* db_drop_users_table_sql ( void )
```

Returns the SQL query to drop the users table.

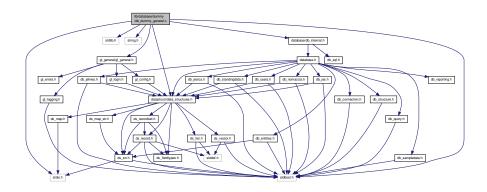

Returns

The SQL query.

5.32 lib/database/dummy/db_dummy_general.c File Reference

Implementation of dummy database functionality.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <stdbool.h>
#include "gl_general/gl_general.h"
#include "database/db_internal.h"
#include "datastruct/data_structures.h"
Include dependency graph for db_dummy_general.c:
```

Macros

• #define _XOPEN_SOURCE 600

Functions

bool db_connect (const char *host, const char *database, const char *username, const char *password)
 Connects to a database.

void db close (void)

Disconnects from a database.

bool db_execute_query (ds_str query)

Executes an SQL query on the database.

ds_recordset db_create_recordset_from_query (ds_str query)

Creates a ds_recordset from a query.

5.32.1 Detailed Description

Implementation of dummy database functionality. This module is useful when compiling for testing purpose on a system without any of the supported database development libraries available.

Author

Paul Griffiths

5.32.2 Macro Definition Documentation

5.32.2.1 #define _XOPEN_SOURCE 600

UNIX feature test macro

5.32.3 Function Documentation

5.32.3.1 bool db_connect (const char * host, const char * database, const char * username, const char * password)

Connects to a database.

Parameters

host	The hostname.
database	The database name.
username	The username with which to connect.
password	The password for the specified user.

Returns

true if the connection was successfully made, false otherwise.

5.32.3.2 ds_recordset db_create_recordset_from_query (ds_str query)

Creates a ds_recordset from a query.

Parameters

query The SELECT query to run.

Returns

A ds_recordset containing the query result, or NULL on failure.

5.32.3.3 bool db_execute_query (ds_str query)

Executes an SQL query on the database.

Parameters

query The query to execute.

Returns

true if the query was successfully executed, false otherwise.

5.33 lib/database/dummy/db_dummy_list_entities_report_sql.c File Reference

Returns dummy SQL query to create list entities report.

Functions

const char * db_list_entities_report_sql (void)
 Returns the SQL query to run the "list entities" report.

5.33.1 Detailed Description

Returns dummy SQL query to create list entities report.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.33.2 Function Documentation

5.33.2.1 const char* db_list_entities_report_sql (void)

Returns the SQL query to run the "list entities" report.

Returns

The SQL query.

5.34 lib/database/dummy/db_dummy_list_users_report_sql.c File Reference

Returns dummy SQL query to create list users report.

Functions

const char * db_list_users_report_sql (void)
 Returns the SQL query to run the "list users" report.

5.34.1 Detailed Description

Returns dummy SQL query to create list users report.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.34.2 Function Documentation

```
5.34.2.1 const char* db_list_users_report_sql ( void )
```

Returns the SQL query to run the "list users" report.

Returns

The SQL query.

5.35 lib/database/mysql/db_mysql_create_entities_table_sql.c File Reference

Returns MYSQL SQL query to create entities table.

Functions

const char * db_create_entities_table_sql (void)
 Returns the SQL query to create the entities table.

5.35.1 Detailed Description

Returns MYSQL SQL query to create entities table.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.35.2 Function Documentation

5.35.2.1 const char* db_create_entities_table_sql (void)

Returns the SQL query to create the entities table.

Returns

The SQL query.

5.36 lib/database/mysql/db_mysql_create_jelines_table_sql.c File Reference

Returns MYSQL SQL query to create journal entry lines table.

Functions

const char * db_create_jelines_table_sql (void)
 Returns the SQL query to create the JE lines table.

5.36.1 Detailed Description

Returns MYSQL SQL query to create journal entry lines table.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.36.2 Function Documentation

5.36.2.1 const char* db_create_jelines_table_sql (void)

Returns the SQL query to create the JE lines table.

Returns

The SQL query.

5.37 lib/database/mysql/db_mysql_create_jes_table_sql.c File Reference

Returns MYSQL SQL query to create journal entries table.

Functions

const char * db_create_jes_table_sql (void)
 Returns the SQL query to create the journal entries table.

5.37.1 Detailed Description

Returns MYSQL SQL query to create journal entries table.

Author

Paul Griffiths

Copyright

The SQL query.

5.50 lib/database/mysql/db_mysql_general.c File Reference

Implementation of MYSQL database functionality.

```
#include <my_global.h>
#include <my_sys.h>
#include <mysql.h>
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "gl_general/gl_general.h"
#include "database/db_internal.h"
```

Include dependency graph for db_mysql_general.c:

Functions

- bool db_connect (const char *host, const char *database, const char *username, const char *password)

 Connects to a database.
- void db_close (void)

Disconnects from a database.

• bool db_execute_query (ds_str query)

Executes an SQL query on the database.

ds_recordset db_create_recordset_from_query (ds_str query)

Creates a ds_recordset from a query.

Variables

- MYSQL * main mss = NULL
- MYSQL * conn_mss = NULL

5.50.1 Detailed Description

Implementation of MYSQL database functionality.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.50.2 Function Documentation

5.50.2.1 bool db_connect (const char * host, const char * database, const char * username, const char * password)

Connects to a database.

Parameters

host	The hostname.
database	The database name.
username	The username with which to connect.
password	The password for the specified user.

Returns

true if the connection was successfully made, false otherwise.

5.50.2.2 ds_recordset db_create_recordset_from_query (ds_str query)

Creates a ds_recordset from a query.

Parameters

query	The SELECT	query to run.
-------	------------	---------------

Returns

A ds_recordset containing the query result, or \mathtt{NULL} on failure.

5.50.2.3 bool db_execute_query (ds_str query)

Executes an SQL query on the database.

Parameters

query	The query to ex	ecute.
-------	-----------------	--------

Returns

true if the query was successfully executed, false otherwise.

5.50.3 Variable Documentation

5.50.3.1 MYSQL* conn_mss = NULL

MYSQL connection object.

5.50.3.2 MYSQL* main_mss = NULL

MYSQL initialization object.

5.51 lib/database/mysql/db_mysql_list_entities_report_sql.c File Reference

Returns MYSQL SQL query to create list entities report.

Functions

const char * db_list_entities_report_sql (void)
 Returns the SQL query to run the "list entities" report.

```

Include dependency graph for ds_list.c:

Data Structures

- struct ds_list_element
- struct ds_list

Functions

• ds_list ds_list_create (const bool free_on_delete, void(*destructor)(void *))

Creates a new list.

void ds_list_destroy (ds_list list)

Destroys a list and frees any associated resources.

void ds_list_destructor (void *list)

A list destructor function.

ds_list ds_list_append (ds_list list, void *data)

Appends an element to a list.

· void ds list remove tail (ds list list)

Removes the last element of a list.

void ds_list_remove_all (ds_list list)

Removes all the elements from a list.

void * ds_list_element (ds_list list, const size_t index)

Retrieves the data at a specified index.

size_t ds_list_length (ds_list list)

Returns the number of elements in a list.

• bool ds_list_is_empty (ds_list list)

Checks if a list is empty.

void ds_list_seek_start (ds_list list)

Sets the current element to the first element of a list.

void ds_list_seek_end (ds_list list)

Sets the current element to the last element of a list.

void * ds_list_get_next_data (ds_list list)

Returns the next element of the list.

void * ds_list_get_prev_data (ds_list list)

Returns the previous element of the list.

5.60.1 Detailed Description

Implementation of generic doubly-linked list data structure.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.60.2 Function Documentation

5.60.2.1 ds_list ds_list_append (ds_list list, void * element)

Appends an element to a list.

Parameters

list	The list to which to append.
element	The element to append.

Returns

The same list, or \mathtt{NULL} on failure.

5.60.2.2 ds_list ds_list_create (const bool free_on_delete, void(*)(void *) destructor)

Creates a new list.

Parameters

free_on_delete	Set to true if the list elements should be destroyed when removed from the list, and when the list itself is destroyed. If set to false, the caller is responsible for destroying the elements
	prior to destroying the list.
destructor	Pointer to a destructor function to use for destroying the list elements, when free_on
	delete is true. If this is set to NULL, free() from the standard C library will be used to
	destroy the elements.

Returns

A newly created list, or \mathtt{NULL} on failure.

5.60.2.3 void ds_list_destroy (ds_list list)

Destroys a list and frees any associated resources.

Parameters

list	The list to destroy.

5.60.2.4 void ds_list_destructor (void * list)

A list destructor function.

This function may be passed to $ds_list_create()$ when creating a list of lists. It calls $ds_list_-destroy()$, but the parameter of $ds_list_destroy()$ is not compatible with the function signature expected by $ds_list_create()$, so this function provides an appropriate interface.

Parameters

list	The list to destroy.

5.60.2.5 void* ds list element (ds list list, const size_t index)

Retrieves the data at a specified index.

Parameters

list	The list from which to retrieve.
index	The index of the desired element.

Returns

A pointer to the data, or NULL if the index is out of range.

5.60.2.6 void* ds_list_get_next_data (ds_list list)

Returns the next element of the list.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

Parameters

list	The list.

Returns

A pointer to the next element, or NULL if the end of the list has been reached.

5.60.2.7 void* ds_list_get_prev_data (ds_list list)

Returns the previous element of the list.

This function returns the data of the "current element", and decrements the current element pointer. Subsequent calls to this function will return successively earlier elements.

Parameters

list	The list.

Returns

A pointer to the previous element, or NULL if the start of the list has been reached.

5.60.2.8 bool ds_list_is_empty (ds_list list)

Checks if a list is empty.

Parameters

list	The list to check.

Returns

true is the list is empty, false otherwise.

5.60.2.9 size_t ds_list_length (ds_list list)

Returns the number of elements in a list.

Parameters

list	The list.

Returns

The number of elements in the list.

5.60.2.10 void ds_list_remove_all (ds_list list)

Removes all the elements from a list.

Parameters

list	The list from which to remove.
------	--------------------------------

5.60.2.11 void ds_list_remove_tail (ds_list list)

Removes the last element of a list.

Parameters

list	The list from which to remove.

5.60.2.12 void ds_list_seek_end (ds_list list)

Sets the current element to the last element of a list.

Parameters

ſ	list	The list.
L		

5.60.2.13 void ds_list_seek_start (ds_list list)

Sets the current element to the first element of a list.

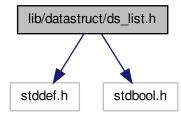

Parameters

lict	The	liet
II J	1110	HOL.

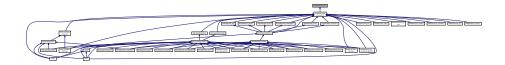

5.61 lib/datastruct/ds_list.h File Reference

Interface to generic doubly-linked list data structure.

```
#include <stddef.h>
#include <stdbool.h>
Include dependency graph for ds_list.h:
```

This graph shows which files directly or indirectly include this file:

Typedefs

• typedef struct ds_list * ds_list

Functions

• ds_list ds_list_create (const bool free_on_delete, void(*destructor)(void *))

Creates a new list.

void ds_list_destroy (ds_list list)

Destroys a list and frees any associated resources.

void ds_list_destructor (void *list)

A list destructor function.

• ds_list ds_list_append (ds_list list, void *element)

Appends an element to a list.

void ds_list_remove_tail (ds_list list)

Removes the last element of a list.

• void ds_list_remove_all (ds_list list)

Removes all the elements from a list.

void * ds_list_element (ds_list list, const size_t index)

Retrieves the data at a specified index.

• size_t ds_list_length (ds_list list)

Returns the number of elements in a list.

bool ds_list_is_empty (ds_list list)

Checks if a list is empty.

void ds_list_seek_start (ds_list list)

Sets the current element to the first element of a list.

void ds_list_seek_end (ds_list list)

Sets the current element to the last element of a list.

void * ds_list_get_next_data (ds_list list)

Returns the next element of the list.

void * ds_list_get_prev_data (ds_list list)

Returns the previous element of the list.

5.61.2 Typedef Documentation

5.61.2.1 typedef struct ds list* ds list

Typedef for opaque list datatype

5.61.3 Function Documentation

5.61.3.1 ds_list ds_list_append (ds_list list, void * element)

Appends an element to a list.

Parameters

list	The list to which to append.
element	The element to append.

Returns

The same list, or NULL on failure.

5.61.3.2 ds list ds_list_create (const bool free_on_delete, void(*)(void *) destructor)

Creates a new list.

Parameters

free_on_delete	Set to true if the list elements should be destroyed when removed from the list, and when
	the list itself is destroyed. If set to false, the caller is responsible for destroying the elements
	prior to destroying the list.
destructor	Pointer to a destructor function to use for destroying the list elements, when free_on
	delete is true. If this is set to NULL, free() from the standard C library will be used to
	destroy the elements.

Returns

A newly created list, or \mathtt{NULL} on failure.

5.61.3.3 void ds_list_destroy (ds_list list)

Destroys a list and frees any associated resources.

Parameters

list	The list to destroy.

5.61.3.4 void ds_list_destructor (void * list)

A list destructor function.

This function may be passed to $ds_list_create()$ when creating a list of lists. It calls $ds_list_-destroy()$, but the parameter of $ds_list_destroy()$ is not compatible with the function signature expected by $ds_list_create()$, so this function provides an appropriate interface.

Parameters

list	The list to destroy.

5.61.3.5 void* ds_list_element (ds_list list, const size_t index)

Retrieves the data at a specified index.

Parameters

list	The list from which to retrieve.
index	The index of the desired element.

Returns

A pointer to the data, or NULL if the index is out of range.

5.61.3.6 void* ds_list_get_next_data (ds_list list)

Returns the next element of the list.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

Parameters

list	The list.

Returns

A pointer to the next element, or NULL if the end of the list has been reached.

5.61.3.7 void* ds_list_get_prev_data (ds_list list)

Returns the previous element of the list.

This function returns the data of the "current element", and decrements the current element pointer. Subsequent calls to this function will return successively earlier elements.

Parameters

list The list.	
----------------	--

Returns

A pointer to the previous element, or NULL if the start of the list has been reached.

5.61.3.8 bool ds_list_is_empty (ds_list list)

Checks if a list is empty.

Parameters

list	t The list to check.	
------	----------------------	--

Returns

true is the list is empty, false otherwise.

5.61.3.9 size_t ds_list_length (ds_list list)

Returns the number of elements in a list.

Parameters

list	The list.

Returns

The number of elements in the list.

5.61.3.10 void ds_list_remove_all (ds_list list)

Removes all the elements from a list.

	list	The list from which to remove.
--	------	--------------------------------

5.61.3.11 void ds_list_remove_tail (ds_list list)

Removes the last element of a list.

Parameters

list	The list from which to remove.

5.61.3.12 void ds_list_seek_end (ds_list list)

Sets the current element to the last element of a list.

Parameters

list	The list.

5.61.3.13 void ds_list_seek_start (ds_list list)

Sets the current element to the first element of a list.

Parameters

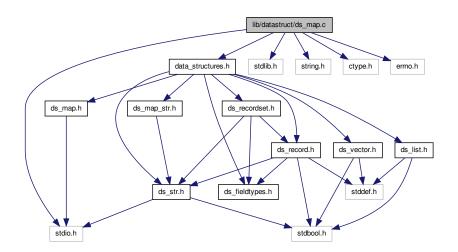

list	t The list.
------	-------------

5.62 lib/datastruct/ds_map.c File Reference

Implementation of string-string hash map data structure.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include <ctype.h>
#include <errno.h>
#include "data_structures.h"
```

Include dependency graph for ds_map.c:

Data Structures

- struct kv pair node
- struct ds_map

Macros

#define _POSIX_C_SOURCE 200809L
 Enables POSIX library functions.

Functions

ds_map ds_map_init (const size_t hash_size)

Initializes a hash map.

void ds_map_destroy (ds_map map)

Destroys a hash map.

const char * ds_map_get_value (ds_map map, const char *key)

Retrieves a value associated with a key in the map.

void ds_map_insert (ds_map map, const char *key, const char *value)

Inserts a key-value pair into a map.

• void ds_map_print_all (ds_map map, FILE *outfile)

Prints all the key-value pairs in a map to stdout.

5.62.1 Detailed Description

Implementation of string-string hash map data structure.

Author

Paul Griffiths

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.62.2 Function Documentation

5.62.2.1 void ds_map_destroy (ds_map map)

Destroys a hash map.

Parameters

map A reference to the map to destroy.

5.62.2.2 const char* ds_map_get_value (ds_map map, const char* key)

Retrieves a value associated with a key in the map.

Parameters

тар	A reference to the hash map.
key	The key.

Returns

A pointer to the value associated with the key, or \mathtt{NULL} if the key is not in the map. The caller should not modify the string to which this pointer points.

5.62.2.3 ds_map ds_map_init (const size_t hash_size)

Initializes a hash map.

Parameters

hash_size	The number of possible hash values.

Returns

A reference to the newly-created hash map.

5.62.2.4 void ds_map_insert (ds_map map, const char * key, const char * value)

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

Parameters

тар	A reference to the hash map.
key	The key.
value	The value.

5.62.2.5 void ds_map_print_all (ds_map map, FILE * outfile)

Prints all the key-value pairs in a map to stdout.

Parameters

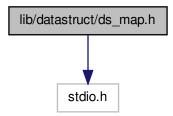

тар	A reference to the map.
outfile	A FILE pointer to which to print the output.

5.63 lib/datastruct/ds_map.h File Reference

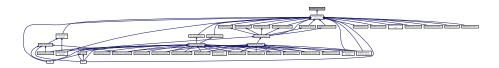

Interface to string-string hash map data structure.

#include <stdio.h>

Include dependency graph for ds_map.h:

5.63.2 Typedef Documentation

5.63.2.1 typedef struct ds_map* ds_map

Opaque data type for hash map

5.63.3 Function Documentation

5.63.3.1 void ds_map_destroy (ds_map map)

Destroys a hash map.

Parameters

map A re	ference to the map to destroy.

5.63.3.2 const char* ds_map_get_value (ds_map map, const char* key)

Retrieves a value associated with a key in the map.

Parameters

тар	A reference to the hash map.
key	The key.

Returns

A pointer to the value associated with the key, or \mathtt{NULL} if the key is not in the map. The caller should not modify the string to which this pointer points.

5.63.3.3 ds_map ds_map_init (const size_t hash_size)

Initializes a hash map.

Parameters

hash_size	The number of possible hash values.
-----------	-------------------------------------

Returns

A reference to the newly-created hash map.

5.63.3.4 void ds_map_insert (ds_map map, const char * key, const char * value)

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

тар	A reference to the hash map.
key	The key.
value	The value.

5.63.3.5 void ds_map_print_all (ds_map map, FILE * outfile)

Prints all the key-value pairs in a map to stdout.

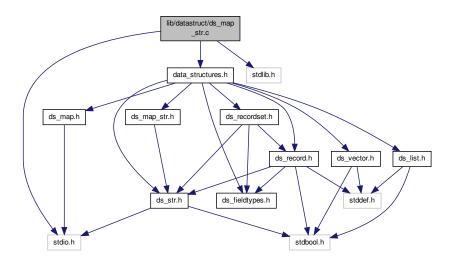

Parameters

тар	A reference to the map.
outfile	A FILE pointer to which to print the output.

5.64.2 Function Documentation

5.64.2.1 void ds_map_str_destroy (ds_map_str map)

Destroys a hash map.

Parameters

тар	A reference to the map to destroy.
•	,

5.64.2.2 ds_str ds_map_str_get_value (ds_map_str map, ds_str key)

Retrieves a value associated with a key in the map.

Parameters

тар	A reference to the hash map.
key	The key.

Returns

A pointer to the value associated with the key, or \mathtt{NULL} if the key is not in the map. The caller should not modify the string to which this pointer points.

5.64.2.3 ds_map_str ds_map_str_init (const size_t hash_size)

Initializes a hash map.

Parameters

hash_size	The number of possible hash values.

Returns

A reference to the newly-created hash map.

5.64.2.4 void ds_map_str_insert (ds_map_str map, ds_str key, ds_str value)

Inserts a key-value pair into a map.

The key and value are copied, so the caller may modify or free () them after calling this function.

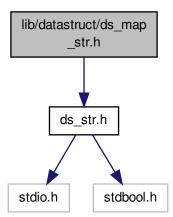

Parameters

тар	A reference to the hash map.
key	The key.
value	The value.

5.66.2 Function Documentation

5.66.2.1 void ds_record_clear (ds record record)

Clears and free () s all the elements in a record.

Parameters

record The record.

5.66.2.2 ds_record ds_record_create (const size_t size)

Creates a new record.

Parameters

size The size of the record.

Returns

A newly created record, or \mathtt{NULL} on failure.

5.66.2.3 void ds_record_destroy (ds_record record)

Destroys a record and frees any associated resources.

Parameters

record	The record to destroy.	

5.66.2.4 void ds_record_destructor (void * record)

A record destructor function.

Parameters

_		
	record	The record to destroy.

5.66.2.5 ds_str ds_record_get_field (ds_record record, const size_t index)

Retrieves the field at a specified index.

Parameters

record	The record from which to retrieve.
index	The index of the desired field.

Returns

A pointer to the field, or \mathtt{NULL} if the index is out of range.

5.66.2.6 ds_str ds_record_get_next_data (ds_record record)

Returns the next field of the record.

This function returns the data of the "current field", and advances the current field pointer. Subsequent calls to this function will return successive fields.

Parameters

record	The record.

Returns

A pointer to the next field, or \mathtt{NULL} if the end of the record has been reached.

5.66.2.7 ds_str ds_record_make_delim_string (ds_record record, const char delim)

Makes a delimited string from a record.

Parameters

record	The record.
delim	The delimiting character.

Returns

The delimited string, or \mathtt{NULL} on failure.

5.66.2.8 ds_str ds_record_make_values_string (ds_record record, enum ds_field_types * types)

Makes a delimited SQL values string from a record.

Parameters

record	The record.
types	An array of types for each field, or NULL to assume they are all strings. The effect of this
	parameter is that string fields are quoted in the values string, whereas non-string fields are
	not.

Returns

The delimited values string, or \mathtt{NULL} on failure.

5.66.2.9 void ds_record_seek_start (ds_record record)

Sets the current field to the first field of a record.

Parameters

T didinately		
record	The record.	

5.66.2.10 void ds_record_set_field (ds_record record, const size_t index, ds_str field)

Sets a field of a record.

If the field is currently occupied, the existing field is free () d.

Parameters

record	The record to set.
index	The index of the field to set.
field	The value to which to set the field.

5.66.2.11 size_t ds_record_size (ds_record record)

Returns the size of a record.

record	The record.

Returns

The size of the record.

5.66.2.12 ds_record ds_record_tokenize (ds_str str, const char delim)

Tokenizes a string into a record.

Parameters

str	The string to tokenize.
delim	The delimiting character.

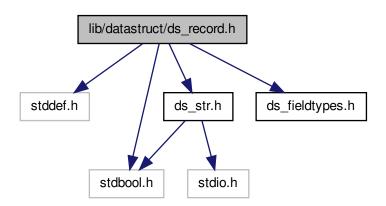

Returns

A new record containing the tokens.

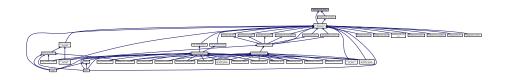

5.67 lib/datastruct/ds_record.h File Reference

5.67.2 Typedef Documentation

5.67.2.1 typedef struct ds_record* ds_record

Typedef for opaque record datatype

5.67.3 Function Documentation

5.67.3.1 void ds_record_clear (ds_record record)

Clears and free () s all the elements in a record.

Parameters

record	The record.

5.67.3.2 ds_record ds_record_create (const size_t size)

Creates a new record.

Parameters

size	The size of the record.

Returns

A newly created record, or \mathtt{NULL} on failure.

5.67.3.3 void ds_record_destroy (ds_record record)

Destroys a record and frees any associated resources.

Parameters

record	The record to destroy.

5.67.3.4 void ds_record_destructor (void * record)

A record destructor function.

Parameters

record	The record to destroy.

5.67.3.5 ds_str ds_record_get_field (ds_record record, const size_t index)

Retrieves the field at a specified index.

Parameters

record	The record from which to retrieve.
index	The index of the desired field.

Returns

A pointer to the field, or \mathtt{NULL} if the index is out of range.

5.67.3.6 ds_str ds_record_get_next_data (ds_record record)

Returns the next field of the record.

This function returns the data of the "current field", and advances the current field pointer. Subsequent calls to this function will return successive fields.

Parameters

record	The record.

Returns

A pointer to the next field, or \mathtt{NULL} if the end of the record has been reached.

5.67.3.7 ds_str ds_record_make_delim_string (ds_record record, const char delim)

Makes a delimited string from a record.

Parameters

record	The record.
delim	The delimiting character.

Returns

The delimited string, or \mathtt{NULL} on failure.

5.67.3.8 ds_str ds_record_make_values_string (ds_record record, enum ds_field_types * types)

Makes a delimited SQL values string from a record.

Parameters

record	The record.
types	An array of types for each field, or NULL to assume they are all strings. The effect of this
	parameter is that string fields are quoted in the values string, whereas non-string fields are
	not.

Returns

The delimited values string, or \mathtt{NULL} on failure.

5.67.3.9 void ds_record_seek_start (ds_record record)

Sets the current field to the first field of a record.

Parameters

record	The record.

5.67.3.10 void ds_record_set_field (ds_record record, const size_t index, ds_str field)

Sets a field of a record.

If the field is currently occupied, the existing field is free () d.

Parameters

record	The record to set.
index	The index of the field to set.
field	The value to which to set the field.

5.67.3.11 size_t ds_record_size (ds_record record)

Returns the size of a record.

Parameters

record	The record.

Returns

The size of the record.

5.67.3.12 ds_record ds_record_tokenize (ds_str str, const char delim)

Tokenizes a string into a record.

Parameters

str	The string to tokenize.
delim	The delimiting character.

Returns

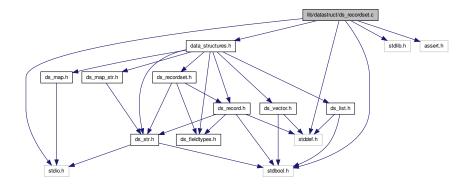

A new record containing the tokens.

5.68 lib/datastruct/ds_recordset.c File Reference

5.68.2 Function Documentation

5.68.2.1 ds_record ds_recordset_add_record (ds_recordset set, ds_record record)

Adds a record to a record set.

The record *must* have the same number of fields as the number of fields provided to ds_recordset_create().

Parameters

set	The record set to which to add.
record	The record to add.

Returns

A pointer to the new record (i.e. it returns the second parameter) or \mathtt{NULL} on failure.

5.68.2.2 ds_recordset ds_recordset_create (const size_t num_fields)

Creates a new record set.

Parameters

num_fields The non-zero number of fields in the record se	et.
------------------------------------------------------------	-----

Returns

A pointer to the new record set.

5.68.2.3 void ds_recordset_destroy (ds_recordset set)

Destroys a record set and frees associated resources.

Parameters

set The record set to destroy.

5.68.2.4 ds_str ds_recordset_get_next_insert_query (ds_recordset set, const char * table_name)

Gets the next SQL INSERT query.

set	The set.
table_name	The table name into which to insert.

Returns

The query. Caller is responsible for free () ing.

5.68.2.5 ds_str ds_recordset_get_text_report (ds_recordset set)

Returns a formatted text report for the record set.

The report is returned as a single multi-line string.

Parameters

set	The record set.

Returns

A pointer to the report. The caller is responsible for free () ing this pointer.

5.68.2.6 ds_record ds_recordset_next_record (ds_recordset set)

Returns the next record in the record set.

This function returns the "current record", and advances the current record pointer. Subsequent calls to this function will return successive records.

Parameters

set	The record set.

Returns

A pointer to the next record, or NULL if the end of the record set has been reached.

5.68.2.7 size_t ds_recordset_num_fields (ds_recordset set)

Returns the number of fields in a record set.

Parameters

set	The record set.
-----	-----------------

Returns

The number of fields in the record set.

5.68.2.8 size_t ds_recordset_num_records (ds recordset set)

Returns the number of records in a record set.

set	The record set.

Returns

The number of records in the record set.

5.68.2.9 void ds_recordset_seek_start (ds_recordset set)

Sets the current record to the first record.

Parameters

set	The record set.

5.68.2.10 void ds_recordset_set_headers (ds_recordset set, ds_record headers)

Sets the record headers in a record set.

Parameters

set	The record set.
headers	The headers, in the form of a ds_record of strings. The list <i>must</i> have the same number of
	elements as the number of fields provided to ds_recordset_create().

5.68.2.11 void ds_recordset_set_type (ds_recordset set, const size_t index, const enum ds_field_types type)

Sets the type for a specified field.

Parameters

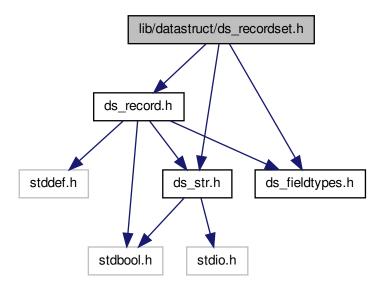

set	The record set.
index	The index to set.
type	The type for the field at the specified index.

5.69 lib/datastruct/ds_recordset.h File Reference

5.69.2 Typedef Documentation

5.69.2.1 typedef struct ds_recordset* ds_recordset

Typedef for opaque record set data type

5.69.3 Function Documentation

5.69.3.1 ds_record ds_recordset_add_record (ds_recordset set, ds_record record)

Adds a record to a record set.

The record *must* have the same number of fields as the number of fields provided to ds_recordset_create().

Parameters

set	The record set to which to add.
record	The record to add.

Returns

A pointer to the new record (i.e. it returns the second parameter) or NULL on failure.

5.69.3.2 ds_recordset ds_recordset_create (const size_t num_fields)

Creates a new record set.

num_fields The nor	n-zero number of fields in the record set.
--------------------	--------------------------------------------

Returns

A pointer to the new record set.

5.69.3.3 void ds_recordset_destroy (ds_recordset set)

Destroys a record set and frees associated resources.

Parameters

set	The record set to destroy.
	·

 $5.69.3.4 \quad \textbf{ds_str} \ \textbf{ds_recordset_get_next_insert_query} \ (\ \textbf{ds_recordset} \ \textit{set}, \ \textbf{const} \ \textbf{char} \ * \ \textit{table_name} \)$

Gets the next SQL INSERT query.

Parameters

set	The set.
table_name	The table name into which to insert.

Returns

The query. Caller is responsible for free () ing.

5.69.3.5 ds_str ds_recordset_get_text_report (ds_recordset set)

Returns a formatted text report for the record set.

The report is returned as a single multi-line string.

Parameters

set	The record set.

Returns

A pointer to the report. The caller is responsible for free () ing this pointer.

5.69.3.6 ds_record ds_recordset_next_record (ds_recordset set)

Returns the next record in the record set.

This function returns the "current record", and advances the current record pointer. Subsequent calls to this function will return successive records.

Parameters

_		
	set	The record set.

Returns

A pointer to the next record, or \mathtt{NULL} if the end of the record set has been reached.

5.69.3.7 size_t ds_recordset_num_fields (ds_recordset set)

Returns the number of fields in a record set.

Parameters

set	The record set.

Returns

The number of fields in the record set.

5.69.3.8 size_t ds_recordset_num_records (ds_recordset set)

Returns the number of records in a record set.

Parameters

set	The record set.
-----	-----------------

Returns

The number of records in the record set.

5.69.3.9 void ds_recordset_seek_start (ds_recordset set)

Sets the current record to the first record.

Parameters

set	The record set.

5.69.3.10 void ds_recordset_set_headers (ds_recordset set, ds_record headers)

Sets the record headers in a record set.

Parameters

set	The record set.
headers	The headers, in the form of a ds_record of strings. The list <i>must</i> have the same number of
	elements as the number of fields provided to ds_recordset_create().

5.69.3.11 void ds_recordset_set_type (ds_recordset set, const size_t index, const enum ds_field_types type)

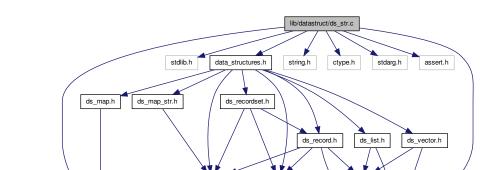

Sets the type for a specified field.

set	The record set.
index	The index to set.
type	The type for the field at the specified index.

5.70 lib/datastruct/ds_str.c File Reference

Implementation of string data structure.

```
#include <stdio.h>
#include <stdlib.h>
#include <stdbool.h>
#include <string.h>
#include <ctype.h>

stdbool.h

Data Structures

• struct ds_str

Functions

• ds_str ds_str_create_direct (char *init_str, const size_t init_str_size)

Creates a string using allocated memory.

• ds_str ds_str_create (const char *init_str)

stdio.h

Creates a new string from a C-style string.

• ds_str ds_str_dup (ds_str src)

Creates a new string from another string.

• ds_str ds_str_create_sprintf (const char *format,...)

Creates a string with sprintf()-type format.

void ds_str_destroy (ds_str str)

Destroys a string and releases allocated resources.

void ds_str_destructor (void *str)

Destroys a string and releases allocated resources.

ds_str ds_str_assign (ds_str dst, ds_str src)

Assigns a string to another.

ds_str ds_str_assign_cstr (ds_str dst, const char *src)

Assigns a C-style string to a string.

```
    const char * ds_str_cstr (ds_str str)

      Returns a C-style string containing the string's contents.
• size_t ds_str_length (ds_str str)
      Returns the length of a string.
ds_str ds_str_size_to_fit (ds_str str)
      Reduces a string's capacity to fit its length.

    ds_str ds_str_concat (ds_str dst, ds_str src)

      Concatenates two strings.

    ds_str ds_str_concat_cstr (ds_str dst, const char *src)

      Concatenates a C-style string to a string.

    ds_str ds_str_trunc (ds_str str, const size_t length)

      Truncates a string.

    unsigned long ds_str_hash (ds_str str)

      Calculates a hash of a string.
• int ds_str_compare (ds_str s1, ds_str s2)
      Compares two strings.
int ds_str_compare_cstr (ds_str s1, const char *s2)
      Compares a string with a C-style string.

    int ds_str_strchr (ds_str str, const char ch, const int start)

      Returns index of first occurence of a character.
• ds str ds str substr left (ds str str, const size t numchars)
      Returns a left substring.

    ds_str ds_str_substr_right (ds_str str, const size_t numchars)

      Returns a right substring.

    void ds_str_split (ds_str src, ds_str *left, ds_str *right, const char sc)

      Splits a string.

    void ds_str_trim_leading (ds_str str)

      Trims leading whitespace in-place.

    void ds_str_trim_trailing (ds_str str)

      Trims trailing whitespace in-place.

    void ds_str_trim (ds_str str)

      Trims leading and trailing whitespace in-place.

    char ds_str_char_at_index (ds_str str, const size_t index)

      Returns the character at a specified index.

    bool ds_str_is_empty (ds_str str)

      Checks if a string is empty.

    bool ds_str_is_alnum (ds_str str)

      Checks is a string contains only alphanumeric characters.

    void ds_str_clear (ds_str str)

      Clears (empties) a string.

    bool ds_str_intval (ds_str str, const int base, int *value)

      Gets the integer value of a string.

    bool ds_str_doubleval (ds_str str, double *value)

      Gets the double value of a string.

    ds_str ds_str_getline (ds_str str, const size_t size, FILE *fp)

      Gets a line from a file and assigns it to a string.

    ds_str ds_str_decorate (ds_str str, ds_str left_dec, ds_str right_dec)

      Brackets a string with decoration strings.
```

5.70.1 Detailed Description

Implementation of string data structure.

Author

Paul Griffiths

Copyright

Copyright 2014 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.70.2 Function Documentation

5.70.2.1 ds_str ds_str_assign (ds_str dst, ds_str src)

Assigns a string to another.

Parameters

dst	The destination string.
src	The source string.

Returns

dst on success, NULL on failure.

5.70.2.2 ds_str ds_str_assign_cstr (ds_str dst, const char * src)

Assigns a C-style string to a string.

Parameters

dst	The destination string.
src	The source C-style string.

Returns

dst on success, NULL on failure.

5.70.2.3 char ds_str_char_at_index (ds_str str, const size_t index)

Returns the character at a specified index.

Parameters

	str	The string.
	index	The specified index.

Returns

The character at the specified index.

5.70.2.4 void ds_str_clear (ds_str str)

Clears (empties) a string.

Parameters

str	The string.

5.70.2.5 int ds_str_compare (ds_str s1, ds_str s2)

Compares two strings.

Parameters

s1	The first string.
s2	The second string.

Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.70.2.6 int ds_str_compare_cstr (ds_str s1, const char * s2)

Compares a string with a C-style string.

Parameters

s1	The first string.
s2	The second, C-Style string.

Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.70.2.7 ds_str ds_str_concat (ds_str dst, ds_str src)

Concatenates two strings.

Parameters

dst	The destination string.
src	The source strings.

Returns

The destination string, or \mathtt{NULL} on failure.

5.70.2.8 ds_str ds_str_concat_cstr (ds_str dst, const char * src)

Concatenates a C-style string to a string.

Parameters

dst	The destination string.
src	The source strings.

Returns

The destination string, or \mathtt{NULL} on failure.

5.70.2.9 ds_str ds_str_create (const char * init_str)

Creates a new string from a C-style string.

Parameters

	The C et de etrine
ınıt str	The C-style string.
11111_3(1	The O style string.
	•

Returns

The new string, or \mathtt{NULL} on failure.

5.70.2.10 ds_str ds_str_create_direct (char * init_str, const size_t init_str_size)

Creates a string using allocated memory.

The normal construction functions duplicate the string used to create it. In cases where allocated memory is already available (e.g. in $ds_str_create_sprintf()$) this function allows that memory to be directly assigned to the string, avoiding an unnecessary duplication.

Parameters

init_str	The allocated memory. IMPORTANT: If the construction of the string fails, this memory will be
	free() d .
init_str_size	The size of the allocated memory. IMPORTANT: The string's length is assumed to be one less
	than this quantity, and a call to strlen() is NOT performed.

Returns

The new string, or NULL on failure.

5.70.2.11 ds_str ds_str_create_sprintf (const char * format, ...)

Creates a string with sprintf()-type format.

Parameters

format	The format string.
	The subsequent arguments as specified by the format string.

Returns

The new string, or \mathtt{NULL} on failure.

5.70.2.12 const char* ds_str_cstr (ds_str str)

Returns a C-style string containing the string's contents.

Parameters

str	The string.

Returns

The C-style string containing the string's contents. The caller should not directly modify this string.

5.70.2.13 ds_str ds_str_decorate (ds_str str, ds_str left_dec, ds_str right_dec)

Brackets a string with decoration strings.

Parameters

str	The string to decorate.
left_dec	The string to add to the left of str.
right_dec	The string to add to the right of str, or NULL to add left_dec to both sides.

Returns

The decorated string.

5.70.2.14 void ds_str_destroy (ds_str str)

Destroys a string and releases allocated resources.

Parameters

str	The string to destroy

5.70.2.15 void ds_str_destructor (void * str)

Destroys a string and releases allocated resources.

This function calls $ds_str_destroy$ (), and can be passed to a data structure expecting a destructor function with the signature void (*)(void *).

Parameters

str	The string to destroy.

5.70.2.16 bool ds_str_doubleval (ds_str str, double * value)

Gets the double value of a string.

str	The string.
value	A pointer to the double in which to store the value. Zero is stored if the string does not contain
	a valid double value.

Returns

true on successful conversion, false if the string does not contain a valid double value.

5.70.2.17 ds_str ds_str_dup (ds_str src)

Creates a new string from another string.

Parameters

src	The other string.

Returns

The new string, or \mathtt{NULL} on failure.

5.70.2.18 ds_str ds_str_getline (ds_str str, const size_t size, FILE * fp)

Gets a line from a file and assigns it to a string.

Any trailing newline character is stripped.

Parameters

str	The string.
size	The maximum number of bytes to read, including the null.
fp	The file pointer from which to read.

Returns

dst

5.70.2.19 unsigned long ds_str_hash (ds_str str)

Calculates a hash of a string.

Uses Dan Bernstein's djb2 algorithm.

Parameters

str	The string.

Returns

The hash value

5.70.2.20 bool ds_str_intval (ds_str str, const int base, int * value)

Gets the integer value of a string.

str	The string.	
base	The base of the integer. This has the same meaning as the third argument to standard C	,
	strtol().	

value A pointer to the integer in which to store the value. Zero is stored if the string does not contain a valid integer value.

Returns

true on successful conversion, false if the string does not contain a valid integer value.

5.70.2.21 bool ds_str_is_alnum (ds_str_str)

Checks is a string contains only alphanumeric characters.

The string must contain *some* alphanumeric characters to check true, i.e. the string must be non-empty. Thus it can be used to check that a string does indeed contain content, and that that content is solely alphanumeric.

Parameters

str	The string.

Returns

true if the string contains only alphanumeric characters, false otherwise.

5.70.2.22 bool ds_str_is_empty (ds_str str)

Checks if a string is empty.

Parameters

str	The string.

Returns

true is the string is empty, false otherwise.

5.70.2.23 size_t ds_str_length (ds_str str)

Returns the length of a string.

Parameters

str	The string.

Returns

The length of the string.

5.70.2.24 ds_str ds_str_size_to_fit (ds_str str)

Reduces a string's capacity to fit its length.

Parameters

str	The string to size.

Returns

str, or NULL on failure.

5.70.2.25 void ds_str_split (ds_str src, ds_str * left, ds_str * right, const char sc)

Splits a string.

Parameters

src	The string to split.
left	Pointer to left substring (modified)
right	Pointer to right substring (modified)
SC	Split character.

5.70.2.26 int ds_str_strchr (ds_str str, const char ch, const int start)

Returns index of first occurence of a character.

Parameters

str	The string.
ch	The character for which to search.
start	The index of the string at which to start looking. Set this to non-zero to begin searching from a
	point other than the first character of the string.

Returns

The index of the first occurence, or -1 if the character was not found.

5.70.2.27 ds_str ds_str_substr_left (ds_str str, const size_t numchars)

Returns a left substring.

Parameters

str	The string.
numchars	The number of left characters to return. If this is greater than the length of the string, the whole
	string is returned.

Returns

A new string representing the substring.

5.70.2.28 ds_str ds_str_substr_right (ds_str str, const size_t numchars)

Returns a right substring.

Parameters

str	The string.
numchars	The number of right characters to return. If this is greater than the length of the string, the
	whole string is returned.

Returns

A new string representing the substring.

5.70.2.29 void ds_str_trim (ds_str str)

Trims leading and trailing whitespace in-place.

Parameters

ctr	The string
511	ine sung.

5.70.2.30 void ds_str_trim_leading (ds_str str)

Trims leading whitespace in-place.

Parameters

	- ·
str	I ha string
3แ	THE SUING.

5.70.2.31 void ds_str_trim_trailing (ds_str str)

Trims trailing whitespace in-place.

Parameters

st	rr Ind etring

5.70.2.32 ds_str ds_str_trunc (ds_str str, const size_t length)

Truncates a string.

Parameters

str	The string.
length	The new length to which to truncate.

Returns

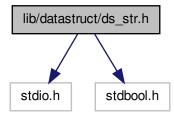

The original string, or \mathtt{NULL} on failure.

5.71 lib/datastruct/ds_str.h File Reference

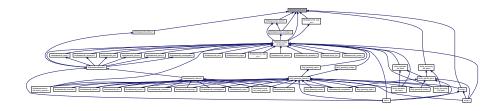

Interface to string data structure.

```
#include <stdio.h>
#include <stdbool.h>
```

Include dependency graph for ds_str.h:

This graph shows which files directly or indirectly include this file:

Typedefs

typedef struct ds_str * ds_str

Functions

• ds_str ds_str_create (const char *init_str)

Creates a new string from a C-style string.

• ds_str ds_str_dup (ds_str src)

Creates a new string from another string.

• ds_str ds_str_create_sprintf (const char *format,...)

Creates a string with sprintf()-type format.

• ds_str ds_str_create_direct (char *init_str, const size_t init_str_size)

Creates a string using allocated memory.

void ds_str_destroy (ds_str str)

Destroys a string and releases allocated resources.

void ds_str_destructor (void *str)

Destroys a string and releases allocated resources.

• ds_str ds_str_assign (ds_str dst, ds_str src)

Assigns a string to another.

ds_str ds_str_assign_cstr (ds_str dst, const char *src)

Assigns a C-style string to a string.

const char * ds_str_cstr (ds_str str)

Returns a C-style string containing the string's contents.

• size_t ds_str_length (ds_str str)

Returns the length of a string.

• ds_str ds_str_size_to_fit (ds_str str)

Reduces a string's capacity to fit its length.

ds_str ds_str_concat (ds_str dst, ds_str src)

Concatenates two strings.

ds_str ds_str_concat_cstr (ds_str dst, const char *src)

Concatenates a C-style string to a string.

ds_str ds_str_trunc (ds_str str, const size_t length)

Truncates a string.

unsigned long ds_str_hash (ds_str str)

Calculates a hash of a string.

• int ds_str_compare (ds_str s1, ds_str s2)

Compares two strings.

int ds_str_compare_cstr (ds_str s1, const char *s2)

Compares a string with a C-style string.

• int ds_str_strchr (ds_str str, const char ch, const int start)

Returns index of first occurence of a character.

ds_str ds_str_substr_left (ds_str str, const size_t numchars)

Returns a left substring.

ds_str ds_str_substr_right (ds_str str, const size_t numchars)

Returns a right substring.

void ds_str_split (ds_str src, ds_str *left, ds_str *right, const char sc)

Splits a string.

void ds_str_trim_leading (ds_str str)

Trims leading whitespace in-place.

void ds_str_trim_trailing (ds_str str)

Trims trailing whitespace in-place.

• void ds_str_trim (ds_str str)

Trims leading and trailing whitespace in-place.

• char ds_str_char_at_index (ds_str str, const size_t index)

Returns the character at a specified index.

• bool ds_str_is_empty (ds_str str)

Checks if a string is empty.

• bool ds_str_is_alnum (ds_str str)

Checks is a string contains only alphanumeric characters.

void ds_str_clear (ds_str str)

Clears (empties) a string.

• bool ds_str_intval (ds_str str, const int base, int *value)

Gets the integer value of a string.

bool ds_str_doubleval (ds_str str, double *value)

Gets the double value of a string.

ds_str ds_str_getline (ds_str str, const size_t size, FILE *fp)

Gets a line from a file and assigns it to a string.

ds_str ds_str_decorate (ds_str str, ds_str left_dec, ds_str right_dec)

Brackets a string with decoration strings.

5.71.2 Typedef Documentation

5.71.2.1 typedef struct ds_str* ds_str

Opaque data type for string

5.71.3 Function Documentation

5.71.3.1 ds_str ds_str_assign (ds_str dst, ds_str src)

Assigns a string to another.

Parameters

dst	The destination string.
src	The source string.

Returns

dst on success, NULL on failure.

5.71.3.2 ds_str ds_str_assign_cstr (ds_str dst, const char * src)

Assigns a C-style string to a string.

Parameters

dst	The destination string.
src	The source C-style string.

Returns

dst on success, NULL on failure.

5.71.3.3 char ds_str_char_at_index (ds_str str, const size_t index)

Returns the character at a specified index.

Parameters

str	The string.
index	The specified index.

Returns

The character at the specified index.

5.71.3.4 void ds_str_clear (ds_str str)

Clears (empties) a string.

Parameters

str	The string.

5.71.3.5 int ds_str_compare (ds_str s1, ds_str s2)

Compares two strings.

Parameters

s1	The first string.
s2	The second string.

Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.71.3.6 int ds_str_compare_cstr (ds_str s1, const char *s2)

Compares a string with a C-style string.

Parameters

s1	The first string.
s2	The second, C-Style string.

Returns

Less than, equal to, or greater than zero if s1 is found, respectively, to be less than, equal to, or greater than s2.

5.71.3.7 ds_str ds_str_concat (ds_str dst, ds_str src)

Concatenates two strings.

Parameters

dst	The destination string.
src	The source strings.

Returns

The destination string, or \mathtt{NULL} on failure.

5.71.3.8 ds_str ds_str_concat_cstr (ds_str dst, const char * src)

Concatenates a C-style string to a string.

Parameters

dst	The destination string.
src	The source strings.

Returns

The destination string, or \mathtt{NULL} on failure.

5.71.3.9 ds_str ds_str_create (const char * init_str)

Creates a new string from a C-style string.

Parameters

init_str	The C-style string.

Returns

The new string, or NULL on failure.

5.71.3.10 ds_str ds_str_create_direct (char * init_str, const size_t init_str_size)

Creates a string using allocated memory.

The normal construction functions duplicate the string used to create it. In cases where allocated memory is already available (e.g. in $ds_str_create_sprintf()$) this function allows that memory to be directly assigned to the string, avoiding an unnecessary duplication.

Parameters

init_str	The allocated memory. IMPORTANT: If the construction of the string fails, this memory will be
	free()d.
init_str_size	The size of the allocated memory. IMPORTANT: The string's length is assumed to be one less
	than this quantity, and a call to strlen() is NOT performed.

Returns

The new string, or NULL on failure.

5.71.3.11 ds_str ds_str_create_sprintf (const char * format, ...)

Creates a string with sprintf()-type format.

Parameters

format	The format string.
	The subsequent arguments as specified by the format string.

Returns

The new string, or NULL on failure.

5.71.3.12 const char* ds_str_cstr (ds_str str)

Returns a C-style string containing the string's contents.

Parameters

	-
ctr	I he string
Ju	rne string.

Returns

The C-style string containing the string's contents. The caller should not directly modify this string.

5.71.3.13 ds_str ds_str_decorate (ds_str str, ds_str left_dec, ds_str right_dec)

Brackets a string with decoration strings.

Parameters

str	The string to decorate.
left_dec	The string to add to the left of str.
right_dec	The string to add to the right of str, or NULL to add left_dec to both sides.

Returns

The decorated string.

5.71.3.14 void ds_str_destroy (ds_str str)

Destroys a string and releases allocated resources.

Parameters

str	The string to destroy

5.71.3.15 void ds_str_destructor (void * str)

Destroys a string and releases allocated resources.

This function calls $ds_str_destroy$ (), and can be passed to a data structure expecting a destructor function with the signature void (*)(void *).

Parameters

str	The string to destroy.

5.71.3.16 bool ds_str_doubleval (ds_str str, double * value)

Gets the double value of a string.

Parameters

str	The string.
value	A pointer to the double in which to store the value. Zero is stored if the string does not contain
	a valid double value.

Returns

true on successful conversion, false if the string does not contain a valid double value.

5.71.3.17 ds_str ds_str_dup (ds_str src)

Creates a new string from another string.

Parameters

src	The other string.

Returns

The new string, or \mathtt{NULL} on failure.

5.71.3.18 ds_str ds_str_getline (ds_str str, const size_t size, FILE *tp)

Gets a line from a file and assigns it to a string.

Any trailing newline character is stripped.

Parameters

str	The string.
size	The maximum number of bytes to read, including the null.
fp	The file pointer from which to read.

Returns

dst

5.71.3.19 unsigned long ds_str_hash (ds_str str)

Calculates a hash of a string.

Uses Dan Bernstein's djb2 algorithm.

Parameters

str	The string.

Returns

The hash value

5.71.3.20 bool ds_str_intval (ds_str str, const int base, int * value)

Gets the integer value of a string.

Parameters

str	The string.
base	The base of the integer. This has the same meaning as the third argument to standard C
	strtol().
value	A pointer to the integer in which to store the value. Zero is stored if the string does not contain
	a valid integer value.

Returns

true on successful conversion, false if the string does not contain a valid integer value.

5.71.3.21 bool ds_str_is_alnum (ds_str str)

Checks is a string contains only alphanumeric characters.

The string must contain *some* alphanumeric characters to check true, i.e. the string must be non-empty. Thus it can be used to check that a string does indeed contain content, and that that content is solely alphanumeric.

Parameters

ctr	The string
Su	The string.

Returns

true if the string contains only alphanumeric characters, false otherwise.

5.71.3.22 bool ds_str_is_empty (ds_str str)

Checks if a string is empty.

Parameters

str	The string.

Returns

true is the string is empty, false otherwise.

5.71.3.23 size_t ds_str_length (ds_str str)

Returns the length of a string.

Parameters

str	The string.

Returns

The length of the string.

5.71.3.24 ds_str ds_str_size_to_fit (ds_str str)

Reduces a string's capacity to fit its length.

Parameters

str	The string to size.

Returns

str, or NULL on failure.

5.71.3.25 void ds_str_split (ds_str src, ds_str * left, ds_str * right, const char sc)

Splits a string.

Parameters

src	The string to split.
left	Pointer to left substring (modified)
right	Pointer to right substring (modified)
SC	Split character.

5.71.3.26 int ds_str_strchr (ds_str str, const char ch, const int start)

Returns index of first occurence of a character.

Parameters

str	The string.
ch	The character for which to search.
start	The index of the string at which to start looking. Set this to non-zero to begin searching from a
	point other than the first character of the string.

Returns

The index of the first occurence, or -1 if the character was not found.

5.71.3.27 ds_str ds_str_substr_left (ds_str str, const size_t numchars)

Returns a left substring.

Parameters

str	The string.
numchars	The number of left characters to return. If this is greater than the length of the string, the whole
	string is returned.

Returns

A new string representing the substring.

5.71.3.28 ds_str ds_str_substr_right (ds_str str, const size_t numchars)

Returns a right substring.

Parameters

str	The string.
numchars	The number of right characters to return. If this is greater than the length of the string, the
	whole string is returned.

Returns

A new string representing the substring.

5.71.3.29 void ds_str_trim (ds_str str)

Trims leading and trailing whitespace in-place.

Parameters

str	The string.

5.71.3.30 void ds_str_trim_leading (ds_str str)

Trims leading whitespace in-place.

Parameters

_4	The state of
STr	Line String.
0.,	The same

5.71.3.31 void ds_str_trim_trailing (ds_str str)

Trims trailing whitespace in-place.

Parameters

str	The string.

5.71.3.32 ds_str ds_str_trunc (ds_str str, const size_t length)

Truncates a string.

Parameters

str	The string.
length	The new length to which to truncate.

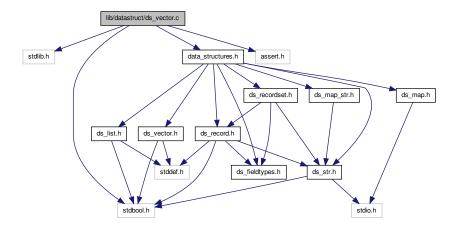

Returns

The original string, or \mathtt{NULL} on failure.

5.72 lib/datastruct/ds_vector.c File Reference

Implementation of generic doubly-linked vector data structure.

```
#include <stdlib.h>
#include <stdbool.h>
#include <assert.h>
#include "data_structures.h"
Include dependency graph for ds_vector.c:
```

Data Structures

· struct ds vector

Functions

- ds_vector ds_vector_create (const size_t size, const bool free_on_delete, void(*destructor)(void *))
 - Creates a new vector.
- void ds_vector_destroy (ds_vector vector)

Destroys a vector and frees any associated resources.

void ds_vector_destructor (void *vector)

A vector destructor function.

void ds_vector_clear (ds_vector vector)

Clears all the elements in a vector.

• void ds_vector_set (ds_vector vector, const size_t index, void *element)

Sets an element of a vector.

void * ds_vector_element (ds_vector vector, const size_t index)

Retrieves the data at a specified index.

• size_t ds_vector_size (ds_vector vector)

Returns the size of a vector.

• void ds_vector_seek_start (ds_vector vector)

Sets the current element to the first element of a vector.

void * ds_vector_get_next_data (ds_vector vector)

Returns the next element of the vector.

5.72.1 Detailed Description

Implementation of generic doubly-linked vector data structure.

Author

Paul Griffiths

5.72.2 Function Documentation

5.72.2.1 void ds_vector_clear (ds_vector vector)

Clears all the elements in a vector.

If the vector was created with $free_on_delete$, the elements are free () d prior to being cleared (i.e. set to NULL).

Parameters

	The constant
vector	The vector.
VCCIOI	The vector.

5.72.2.2 ds vector ds_vector_create (const size_t size, const bool free_on_delete, void(*)(void *) destructor)

Creates a new vector.

Parameters

size	The size of the vector.
free_on_delete	Set to true if the vector elements should be destroyed when removed from the vector, and
	when the vector itself is destroyed. If set to false, the caller is responsible for destroying the
	elements prior to destroying the vector.
destructor	Pointer to a destructor function to use for destroying the vector elements, when free_on
	delete is true. If this is set to NULL, free () from the standard C library will be used to
	destroy the elements.

Returns

A newly created vector, or \mathtt{NULL} on failure.

5.72.2.3 void ds_vector_destroy (ds_vector vector)

Destroys a vector and frees any associated resources.

Parameters

vector	The vector to destroy.

5.72.2.4 void ds_vector_destructor (void * vector)

A vector destructor function.

This function may be passed to ds_vector_create() when creating a vector of vectors. It calls ds_vector_destroy(), but the parameter of ds_vector_destroy() is not compatible with the function signature expected by ds_vector_create(), so this function provides an appropriate interface.

Parameters

vector	The vector to destroy.

5.72.2.5 void* ds_vector_element (ds_vector vector, const size_t index)

Retrieves the data at a specified index.

Parameters

vector	The vector from which to retrieve.
index	The index of the desired element.

Returns

A pointer to the data, or \mathtt{NULL} if the index is out of range.

5.72.2.6 void* ds_vector_get_next_data (ds_vector vector)

Returns the next element of the vector.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

Parameters

vector	The vector.

Returns

A pointer to the next element, or NULL if the end of the vector has been reached.

5.72.2.7 void ds_vector_seek_start (ds_vector vector)

Sets the current element to the first element of a vector.

Parameters

vector	The vector.

5.72.2.8 void ds_vector_set (ds_vector vector, const size_t index, void * element)

Sets an element of a vector.

If the element is currently occupied, the existing element is free () d.

Parameters

vector	The vector to which to set.
index	The index of the element to set.
element	The element to set.

5.72.2.9 size_t ds_vector_size (ds_vector vector)

Returns the size of a vector.

Parameters

vector	The vector.

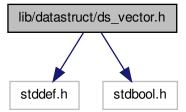

Returns

The size of the vector.

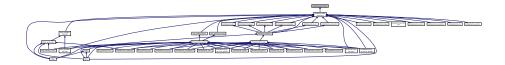

5.73 lib/datastruct/ds_vector.h File Reference

Interface to generic doubly-linked vector data structure.

```
#include <stddef.h>
#include <stdbool.h>

5.73.2.1 typedef struct ds_vector* ds_vector

Typedef for opaque vector datatype

5.73.3 Function Documentation

5.73.3.1 void ds_vector_clear (ds_vector vector)

Clears all the elements in a vector.

If the vector was created with $free_on_delete$, the elements are free () d prior to being cleared (i.e. set to NULL).

Parameters

vector The vector.

5.73.3.2 ds vector ds_vector_create (const size_t size, const bool free_on_delete, void(*)(void *) destructor)

Creates a new vector.

Parameters

|--|

free_on_delete	Set to true if the vector elements should be destroyed when removed from the vector, and
	when the vector itself is destroyed. If set to false, the caller is responsible for destroying the
	elements prior to destroying the vector.
destructor	Pointer to a destructor function to use for destroying the vector elements, when free_on
	delete is true. If this is set to NULL, free () from the standard C library will be used to
	destroy the elements.

Returns

A newly created vector, or \mathtt{NULL} on failure.

5.73.3.3 void ds_vector_destroy (ds_vector vector)

Destroys a vector and frees any associated resources.

Parameters

vector	The vector to destroy.

5.73.3.4 void ds_vector_destructor (void * vector)

A vector destructor function.

This function may be passed to ds_vector_create() when creating a vector of vectors. It calls ds_vector_destroy(), but the parameter of ds_vector_destroy() is not compatible with the function signature expected by ds_vector_create(), so this function provides an appropriate interface.

Parameters

vector	The vector to destroy.
--------	------------------------

5.73.3.5 void* ds_vector_element (ds_vector vector, const size_t index)

Retrieves the data at a specified index.

Parameters

vector	The vector from which to retrieve.
index	The index of the desired element.

Returns

A pointer to the data, or \mathtt{NULL} if the index is out of range.

5.73.3.6 void* ds_vector_get_next_data (ds_vector vector)

Returns the next element of the vector.

This function returns the data of the "current element", and advances the current element pointer. Subsequent calls to this function will return successive elements.

Parameters

vector	The vector.

Returns

A pointer to the next element, or NULL if the end of the vector has been reached.

5.73.3.7 void ds_vector_seek_start (ds_vector vector)

Sets the current element to the first element of a vector.

Parameters

vector	The vector.

5.73.3.8 void ds_vector_set (ds_vector vector, const size_t index, void * element)

Sets an element of a vector.

If the element is currently occupied, the existing element is free () d.

Parameters

vector	The vector to which to set.
index	The index of the element to set.
element	The element to set.

5.73.3.9 size_t ds_vector_size (ds_vector vector)

Returns the size of a vector.

Parameters

vector	The vector.

Returns

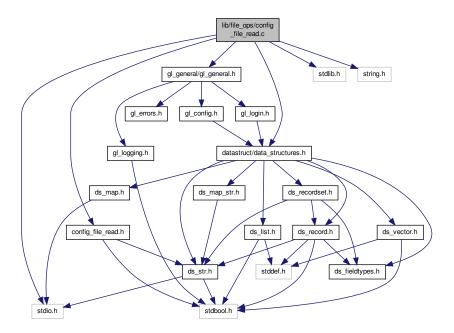

The size of the vector.

5.74 lib/file_ops/config_file_read.c File Reference

Implementation of configuration file reading functionality.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
#include "gl_general/gl_general.h"
#include "datastruct/data_structures.h"
#include "config_file_read.h"
```

Include dependency graph for config_file_read.c:

Macros

- #define MAX_BUFFER_SIZE 1024
- #define CONFIG_MAP_SIZE 100

Functions

• bool config_init (void)

Initializes configuration data.

int config_file_read (const char *filename)

Reads a configuration file and stores the key-value pairs.

• ds_str config_value_get (ds_str key)

Returns the value associated with a key.

ds_str config_value_get_cstr (const char *key)

Returns the value associated with a C-style string key.

void config_value_set (ds_str key, ds_str value)

Sets a key-value in the configuration structure.

void config_free (void)

Frees the resources used by this module.

5.74.1 Detailed Description

Implementation of configuration file reading functionality. This module reads configuration files in the format "key = value" and makes those values available. Leading and trailing whitespace is removed for both the key and the value. Blank lines and lines starting with a '#' are ignored in the configuration file.

Author

Paul Griffiths

Copyright 2013 Paul Griffiths. Distributed under the terms of the GNU General Public License. http-://www.gnu.org/licenses/

5.74.2 Macro Definition Documentation

5.74.2.1 #define CONFIG MAP SIZE 100

Size to use for the hash map to contain the key-value pairs

5.74.2.2 #define MAX_BUFFER_SIZE 1024

Maximum size of buffers

5.74.3 Function Documentation

5.74.3.1 int config_file_read (const char * filename)

Reads a configuration file and stores the key-value pairs.

Parameters

filename The name of the configuration file.

Returns

CONFIG_FILE_OK on success, CONFIG_FILE_NO_FILE if the specified file could not be opened for reading, CONFIG_FILE_MALFORMED_FILE if the configuration file was improperly formed.

5.74.3.2 void config_free (void)

Frees the resources used by this module.

The user should make copies of any required keys or values prior to calling this function. This function need not be called if <code>config_file_read()</code> returned an error.

5.74.3.3 bool config_init (void)

Initializes configuration data.

Returns

true on success, false on failure.

5.74.3.4 ds_str config_value_get (ds_str key)

Returns the value associated with a key.

Parameters

key	The specified key.

Returns

A pointer to the associated value, or \mathtt{NULL} if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.74.3.5 ds_str config_value_get_cstr (const char * key)

Returns the value associated with a C-style string key.

Parameters

key	The specified key.

Returns

A pointer to the associated value, or \mathtt{NULL} if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.74.3.6 void config_value_set (ds_str key, ds_str value)

Sets a key-value in the configuration structure.

Parameters

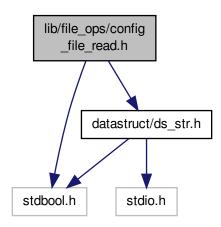

key	The key.
value	The value.

5.75 lib/file_ops/config_file_read.h File Reference

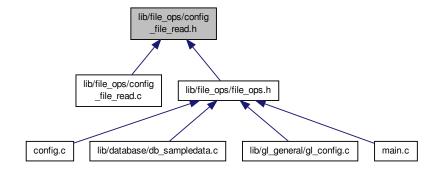

Interface to configuration file reading functionality.

```
#include <stdbool.h>
#include "datastruct/ds_str.h"
```

Include dependency graph for config_file_read.h:

This graph shows which files directly or indirectly include this file:

Macros

- #define CONFIG_FILE_OK 0
- #define CONFIG_FILE_NO_FILE 1
- #define CONFIG_FILE_MALFORMED_FILE 2

Functions

• bool config_init (void)

Initializes configuration data.

• int config_file_read (const char *filename)

Reads a configuration file and stores the key-value pairs.

void config_free (void)

Frees the resources used by this module.

ds_str config_value_get (ds_str key)

Returns the value associated with a key.

ds_str config_value_get_cstr (const char *key)

Returns the value associated with a C-style string key.

void config_value_set (ds_str key, ds_str value)

Sets a key-value in the configuration structure.

5.75.1 Detailed Description

Interface to configuration file reading functionality. This module reads configuration files in the format "key = value" and makes those values available. Leading and trailing whitespace is removed for both the key and the value. Blank lines and lines starting with a '#' are ignored in the configuration file.

Author

Paul Griffiths

5.75.2 Macro Definition Documentation

5.75.2.1 #define CONFIG_FILE_MALFORMED_FILE 2

Return status when configuration file is improperly formed

5.75.2.2 #define CONFIG_FILE_NO_FILE 1

Return status when unable to open file for reading

5.75.2.3 #define CONFIG_FILE_OK 0

Return status for success

5.75.3 Function Documentation

5.75.3.1 int config_file_read (const char * filename)

Reads a configuration file and stores the key-value pairs.

Parameters

c·1	
filename	The name of the configuration file.
IIICHAHIC	The hame of the configuration life.

Returns

CONFIG_FILE_OK on success, CONFIG_FILE_NO_FILE if the specified file could not be opened for reading, CONFIG_FILE_MALFORMED_FILE if the configuration file was improperly formed.

```
5.75.3.2 void config_free ( void )
```

Frees the resources used by this module.

The user should make copies of any required keys or values prior to calling this function. This function need not be called if config_file_read() returned an error.

```
5.75.3.3 bool config_init (void)
```

Initializes configuration data.

Returns

true on success, false on failure.

5.75.3.4 ds_str config_value_get (ds_str key)

Returns the value associated with a key.

Parameters

Returns

A pointer to the associated value, or \mathtt{NULL} if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.75.3.5 ds str config_value_get_cstr (const char * key)

Returns the value associated with a C-style string key.

Parameters

key	The specified key.

Returns

A pointer to the associated value, or \mathtt{NULL} if the key was not present in the configuration file. The caller should not modify the string to which the pointer points.

5.75.3.6 void config_value_set (ds_str key, ds_str value)

Sets a key-value in the configuration structure.

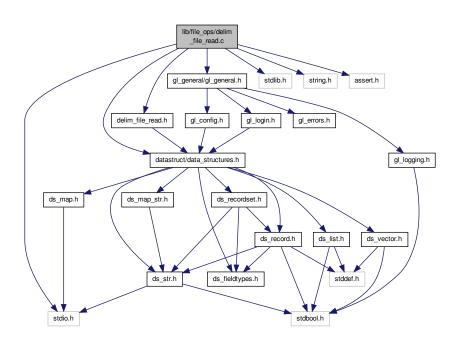

Parameters

key	The key.
value	The value.

5.76 lib/file_ops/delim_file_read.c File Reference

Implementation of delimited file reading functionality.

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>

5.79.2 Function Documentation

5.79.2.1 bool get_configuration (struct params * params, const char * conf_file)

Gets parameters from a configuration file.

Parameters

params	A pointer to a parameters structure to populate.
conf_file	The filename of the configuration file.

Returns

true on success, false otherwise.

5.79.2.2 void params_free (struct params * params)

Frees a parameter structure.

Parameters

params	A pointer to the structure to free.

5.79.2.3 struct params* params_init(void) [read]

Initializes a parameters structure.

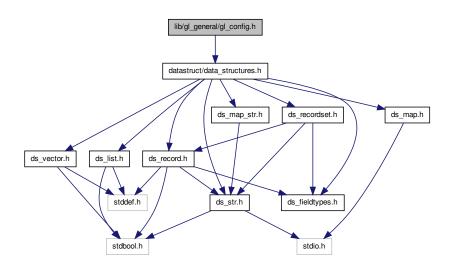

Returns

An initialized parameters structure.

5.80 lib/gl_general/gl_config.h File Reference

5.88.2 Function Documentation

5.88.2.1 int main (int argc, char ** argv)

Main function.

Main function.

Returns

Exit status.

5.88.2.2 void print_help_message (char * progname)

Prints a program help message.

Parameters

Ī	progname	The program name.

5.88.2.3 void print_usage_message (char * progname)

Prints a program usage message.

Parameters

progname The program name.

5.88.2.4 void print_version_message (char * progname)

Prints a program version message.

Parameters

progname The program name.

5.88.2.5 void test_functionality (void)

Casual test function.

Used for casually testing program functionality.
